

HOW TO SET THE AVG ANTIVIRUS SOFTWARE TO ACCEPT E@SYFILE™ EMPLOYER!

AVG is the antivirus guard internet security software used by many.

Due to certain settings within AVG, you will need to add e@syFile™ Employer to the exceptions list in your advance settings in order to work without any further interference from the AVG:

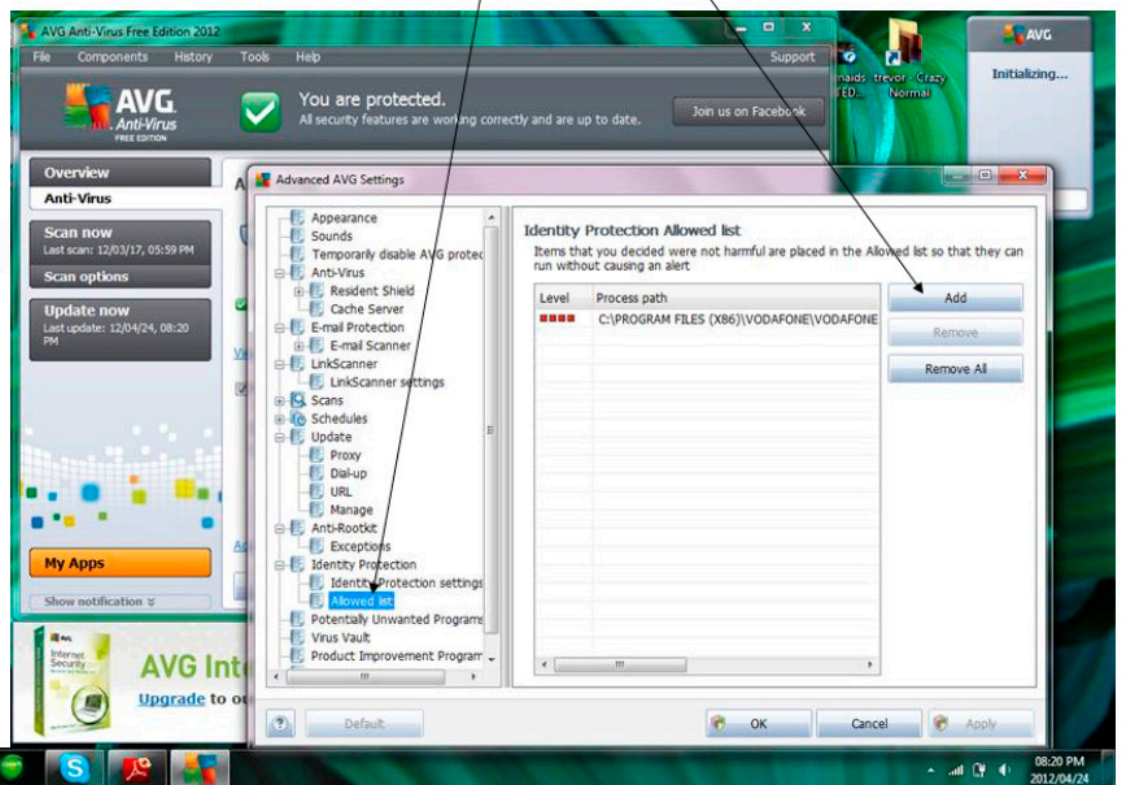

Below is a detailed explanation on how to do this:

Open the AVG application Centre and press F8.

This will open the AVG settings screen and select under Identity Protection the Allowed list.

Now select Add.

This will open the AVG settings screen and you then select under Identity Protection the Allowed list. Now select Add!

Click Browse and follow the file path to the local store where the database is kept.

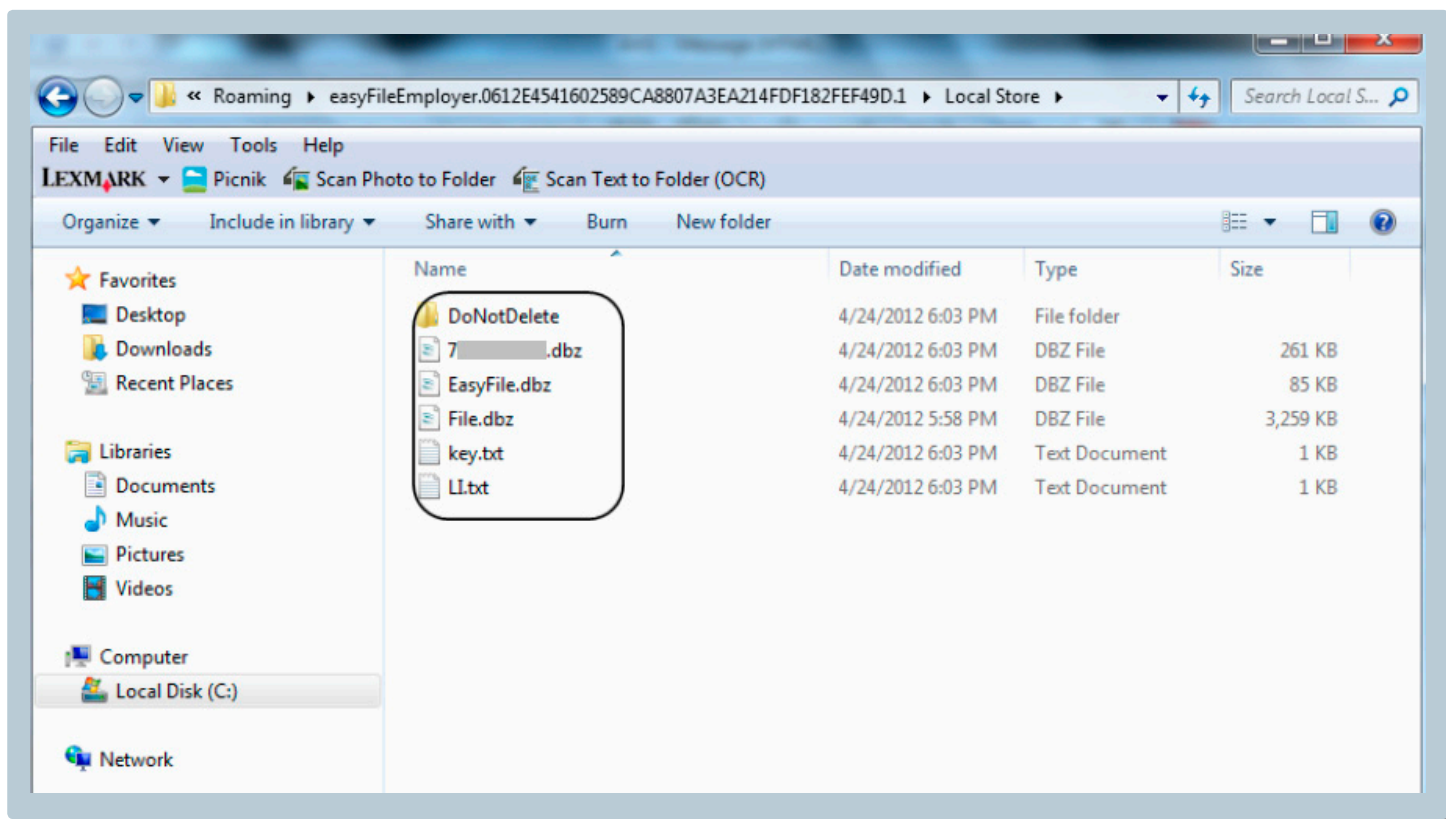

Now you can click on Browse and follow the file path to the local store where the DB is kept

Select the "All files" option so that you can see all the files in the local store

Now select each file in the folder one at a time until they have all been added and apply!

Select the "All files" option so you can see all the files in the local store.

Select each file in the folder one at a time until they have all been added and apply.

You can now safely open e@syFile™ Employer and work.

Should you still be experiencing a problem when opening the software for the first time, delete the database and restore the previous one that worked.

You should now be able to work without any further interference from the AVG.

Note: It is important to always backup your current information on your computer prior to installing a new version of e@syFile™ Employer to avoid the risk of potential data loss during the update process.
