2.4 Transaction Type

REPRESENTATION: Message Function
WCO3 PATH: Declaration.MessageFunctionCode (017)
FIELD TYPE and LENGTH: AN 3

Description:
A code which describes the function of a CCD, for example, it defines if it is an original, amended, cancelled or replacement clearance.

<table>

</tr>
<tr>
<td>1</td>
<td>Cancellation</td>
</tr>
<tr>
<td>5</td>
<td>Replace (Not for cargo)</td>
</tr>
</tbody>
</table>

Operations Ref: None
Location: SAD Box 4

Rules and Conditions of Usage:

a) Required for all CCDs.
b) A transaction type defines the type of clearance being submitted, for example:
   i) “9” = An original clearance. Message function code “9” must be used for first time clearance of an import, export or transit consignment, EXCEPT in the case of a substitution or replacement clearance, where message function code “5” will apply.
   ii) “4” = A change or amendment clearance where the content of any original or substitution clearance requires an amendment. An amendment clearance includes the change to any header or line information or the cancellation of a line item.

A) When AMENDING an original or substitution CCD:
   i) Always provide full header, totals and all line details.
   ii) In respect of import clearance amendments, always provide ‘Total Duties Due’ and ‘Total VAT Due’.
   III) Any ‘header level’ data field information can be amended EXCEPT the declarant’s Local Reference Number (LRN), the Procedure Category Code (PCC), and the District Office.
   IV) Any ‘line level’ data field can be amended EXCEPT the PCC and/or CPC combination. As the case with original CCDs in respect of warehoused goods, the ‘previous’ CPC may be different across line items. In other words, previous CPCs 40, 41, and 44 can be used on a single clearance on multiple line items, respectively.

B) When ADDING a line item:
   i) Such line must always be added to the end of the CCD, taking into account any lines which may have been cancelled. **Example:** Using the above scenario – a trader wishes to add an additional line item in a second amendment, he / she must submit a CCD reflecting line items “1”, “3”, “4” and “6”.
   ii) If lines are deleted, and a new line is thereafter to be added, such line must not be declared in the space of the deleted lines. **Example:** If line items “2” and “5” were deleted, a new line must be inserted as line “7”, i.e. the amended CCD will therefore contain lines “1”, “3”, “4”, “6” and “7”.

C) Validating control changes
   i) The following errors will result in outright rejection of a CCD:

<table>
<thead>
<tr>
<th>Rejection error description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original declaration not on Customs and Excise information system</td>
</tr>
<tr>
<td>Un-finalised amended CCD on original declaration exist</td>
</tr>
<tr>
<td>Client unknown</td>
</tr>
<tr>
<td>FICA status unknown</td>
</tr>
<tr>
<td>No banking information</td>
</tr>
<tr>
<td>Drawback error</td>
</tr>
</tbody>
</table>
II) The MRN of the original CCD being cancelled must be inserted in the field provided at header level.

III) If the Previous Procedure MRN used in a CCD is older than two (2) years, motivation from the client for such must be included with the supporting documents.

D) **Amendments and Offsetting**

I) Offsetting – for any CCD where an amendment thereto results in a combination of both debits / credits across different duty types, the billing of such debits / credits will be offset across all lines to derive a final amount for accounting purposes. This implies that only one (1) amended CCD will be required to cater for the debit and credit.

II) However, should separate amended CCDs be submitted the system will use the first amended CCD to perform the billing based on nett line items (offsetting), according to (A) above. The second amended CCD (which currently is the refund) will be processed by to the system as a free CCD due to the over and under payments already processed.

III) Nett effect credit amended CCDs, including any amended CCD where a credit is due on VAT, will be subject to a refund audit and the submission of supporting documents.

iii) “1” = A cancellation clearance where the full content of any original or substitution clearance requires to be cancelled. A cancellation clearance implies the cancellation of a complete CCD.

A) Declarants must only supply header and total details on the cancellation clearance.
B) The ‘Total Duties Due’ and ‘Total VAT Due’ data fields must be inserted on imports.
C) ‘Total Lines’ data field must always reflect zero.
D) The MRN of the original CCD being cancelled must be inserted in the field provided at header level.

E) BLNS will notify users when the following requirements become applicable:

I) **Cancellation scenario 1**: A CCD is lodged but goods did not arrive. The cancellation clearance must indicate relevant ‘payment code’.
II) **Cancellation scenario 2**: Goods have been declared with incorrect PCC. Indicate relevant ‘payment code’.
III) **Cancellation scenario 3**: A CCD is lodged, but goods cannot be used according to the PCC / CPC combination declared OR the trader is not entitled to clear goods under the original PCC / CPC combination declared. Indicate relevant ‘payment code’.

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>R</td>
<td>Refund to trader;</td>
</tr>
<tr>
<td>J</td>
<td>Refund to trader’s nominee;</td>
</tr>
<tr>
<td>M</td>
<td>Refund to trader’s deferment account.</td>
</tr>
</tbody>
</table>

iv) “5” = A replacement clearance. A replacement clearance implies the substitution of an original clearance for a new clearance under a different Customs procedure.

A) A replacement clearance is used to where an incorrect PCC was declared on an original CCD. It is used in conjunction with ‘Transaction Type “1” being a new clearance replacing a complete original clearance or part of an original clearance;

B) The MRN original clearance which is now being replaced (substituted) must be inserted in the ‘previous MRN’ (For Official Use box) field of the replacement clearance; and

C) A replacement clearance is used in combination with either a “Cancellation” of a full clearance, or, ‘Amendment’ to a portion of a clearance:

I) **Full consignment scenario**: Where a full consignment is required to be cleared under a different PCC, a ‘Replacement’ clearance is required, followed by a ‘Cancellation’ clearance in respect of the ‘Original’ CCD.

II) **Partial consignment scenario**: Where part of the consignment is required to be cleared under a different PCC and the balance remains as cleared on the ‘Original’.

D) A ‘Replacement’ clearance is required for the portion where the PCC differs from the ‘Original’; and an ‘Amendment’ clearance is required on the ‘Original’ CCD for the portion where the PCC remains as entered. Only one (1) PCC and requested / previous CPC combination is allowed per clearance, EXCEPT in respect of warehoused goods where the ‘previous’ CPC may be different across line items.
other words, previous CPCs 40, 41, and 44 can be used on a single clearance on multiple line items, respectively.

2.6 Procedure Category Code (PCC)

**REPRESENTATION:** PCC

**WCO3 PATH:** SET - Declaration.AdditionalInformation.StatementTypeCode (369) = REG (Regulatory information, the free text contains information for regulatory authority)

SET - Declaration.AdditionalInformation.StatementCode (226) = PCC (Procedure Category Code)

**FIELD TYPE and LENGTH:** AN 3

**Description:**
The Procedure Category Code describes the Customs procedure under which the CCD is being lodged. The codes are as follows:

| A | Home Use (including goods cleared under relief of duties and taxes. |
| B | National and International Transit procedure |
| C | Transhipment procedure |
| D | Temporary Admission procedure |
| E | Warehousing procedure |
| F | Stores procedure |
| G | Tax Free Shop procedure |
| H | Export procedure |
| I | Temporary Export procedure |
| J | Inward Processing procedure |
| K | Processing for Home Use procedure |
| L | Outward Processing procedure |

Notwithstanding the fact that Home Use is not a specified Customs procedure, it is nevertheless, for the sake of uniformity administered as such on a CCD.

**Operations Ref:** None

**Location:**
| SAD Box 1 | CD1: Declaration Type > Procedure Category Code |
Rules and Conditions of Usage:

a) Required for all CCDs.

b) Only one (1) PCC and requested / previous CPC combination is allowed per clearance, EXCEPT in respect of warehoused goods where the ‘previous’ CPC may be different across line items. In other words, previous CPCs 40, 41, and 44 can be used on a single clearance on multiple line items, respectively.

c) In the case of goods already cleared, a PCC can only be changed by cancellation and substitution.

d) Declarants must utilise the table of permissible combinations provided (SC-CF-04-A14). This is important when planning the clearance of goods for importation, transit and exportation –

i) **Example 1:** Imported goods removed under national transit upon arrival, thereafter declared for home use must be cleared as follows: B 22-00 then A 11-20. CPCs cannot be changed by an amendment clearance, therefore declarants and brokers must ensure the appropriate CPC combinations are planned upfront.

ii) **Example 2:** Goods exported for refurbishment or repair for subsequent re-importation to South Africa must follow the temporary export procedure declaring the goods with CPC I 75-00. This identifies the transaction as requiring a follow-up re-importation clearance once the goods have been refurbished or repaired. The re-importation clearance must occur under CPC I 77-75.

   II) Master Cargo Carrier Code [Mandatory] (see paragraph 2.55).

E) For export CPCs, if Transport Code = 1 (sea) is used: The transport document number must be declared in two (2) parts in the format as in the example below:

   B) The number must be declared continuous e.g. 083-36301171. The correctness of the eight (8) digit numeric number must be validated according to the IATA modulus-7 validation rule which is applied as follows:

   I) The first string of seven (7) digits must be divided by 7 (3630117÷7);
   II) The eighth digit is the check digit which must be equal to the remainder of the above division (3630117÷7); and

<td>Goods sold to travellers, the Transport Document Number must be declared as “ZA7” followed by the relevant internal reference number</td>
</tr>
</tbody>
</table>

IV) Only one (1) master and one (1) house air waybill can be entertained on a CCD.

V) If master and house transport documents are issued, the particulars of the master transport document must be reflected here.

VI) The format of the transport document in respect of goods to be released by NON-IATA airlines should however be in the same format: viz. NON-IATA airline code, followed by a hyphen and then the waybill number. The number should also be declared continuous e.g. **ZA1-12345678**.
VII) On Transport Document Number, for Air, the check digit will be validated for correctness. If found to be invalid the transaction will be rejected.

Operations Ref:
SC-CF-04-A02 – Supplementary Unit Codes
SC-CF-04-A04 – Other Quantities Countable
Location:
| SAD Box 45 | CD1: Consignment Line Details > Countable Quantity |

Rules and Usage:

a) This data field is to declare a quantity specifically for stock taking purposes. E.g. textiles where the statistical quantity required is kilograms (KG) and a classification quantity required is area in square meters (SM). The wholesale packaging of textile fabric is rolls and therefore the amount of rolls must be declared in this field with the applicable countable quantity code of “RO”. The provision in terms of Section 20(6) which clearly indicate that goods packed for retail sale must not be entered for storage in a storage warehouse unless they are packed in outer containers normally used in the wholesale trade in respect of such goods still apply. In these cases the countable quantity will be the outer containers normally used in the wholesale trade.
b) Required for all warehouse and ex warehouse CCDs.
c) The amount must not reflect decimals.

5.14 Code-“4”

REPRESENTATION: Countable Quantity Code
FIELD TYPE and LENGTH: AN 2

5.15 Customs Value

REPRESENTATION: Customs Value
WCO SAFE: Required field.
FIELD TYPE and LENGTH: AN 12

Description:

a) **IMPORTS**: Denotes the value for Customs purposes calculated in terms Section 65(1) read with Section 66 adjusted in terms of Section 67. Only a full Rand value must be entered and 50 cents is considered to be less than half of a Rand. The minimum value is R1.
b) **EXPORTS**: Denotes the value to be entered in this field is defined in Section 72 and must be reflected to the nearest Rand. If the value is less than R1 such value shall be calculated as R1. For values in excess of R1 fractions up to 50 cent is considered to be less than half of a Rand and must be rounded off to the lower amount. Fractions of R1 in excess of 50 cent are regarded as a full Rand.

**Operations Ref**: None

**Location**:
- SAD Box 42
- CD1: Consignment Line Details > Customs Value

**Rules and Usage**:

a) Customs value must always be expressed in South African Rand, no cents. In other words no decimals.
b) **Cost of Repair**. This concept is applicable when declaring goods under ‘procedure measure’ item 409.04. The requirement when declaring cost of repair is as follows:
   i) Customs Value field = value of goods temporarily exported; and
   ii) Actual Price field = cost of repair.
   iii) **Example**:
       A) Machine imported from UK. Value = R5400.
       B) Machine breaks down sent for repair to supplier –
         I) Ocean freight and costs for delivery of machine to manufacturer in UK = R700.
         II) Repair costs in UK = R500.
         III) Repairer’s profit = R100
       C) Machine repaired and returned to South Africa – Costs, charges and expenses incidental to delivery of the machine to the fob valuation point for export to South Africa = R200
       D) Clearance for re-importation must therefore reflect the following details:
         i) Customs Value field = R5400.
         ii) Actual Price field = R800.

c) **Intellectual Value**. The requirement when declaring intellectual value is as follows:
   i) Only applicable to import CCDs;
   ii) Intellectual Value is only applicable to the clearance of good classified within Tariff 8523;
   iii) Customs Value field = cost of the carrier medium; and
   iv) Actual Price field = cost of the carrier medium plus intellectual value.
   v) **Example 1**:
      A) Recorded computer programmes = R4920
      B) Value split as follows:
         I) Intellectual value = R4500
         II) Value of carrier medium = R420
      C) Therefore:
         I) Customs value field = R420 and
         II) Actual Price field = R4500.
   vi) **Example 2**:
      A) Recorded computer programmes = R5150
      B) Customs value = R5150
      C) The requirement that the value of the carrier medium must be clearly distinguished from the data or instruction (intellectual value) was not compiled with. Therefore the full invoiced price will form the basis for calculation of the Customs value.
   vii) **Example 3**:
      A) Recorded computer games = R6720
      B) Value split as follows:
         I) Intellectual Value = R6200
         II) Value of carrier medium = R520
      C) Therefore:
         I) Customs value field = R 520
         II) Actual Price field = R6720
d) Except in the instances below, the Customs / Excise value and the actual price on import CCDs must be equal, if not the CCD will be rejected:
   i) Where the CPC is I 77-20/60/68/75 or I 78-76;
   ii) Any CPC where the tariff classification is 8523;
   iii) Any CPC where the actual price is zero (0); or
   iv) Any CPC, where a VDN is declared, the actual price and Customs value may differ.

**Operations Ref:** None  
**Location:**  
| SAD Box 46 | CD1: Consignment Line Details > Actual Price |

#### Rules and Usage:

a) **Customs value must always be expressed in South African Rand, no cents. In other words no decimals.**

   II) Actual Price field = R4500
   vi) **Example 2:**
   A) Recorded computer programmes = R5150
   B) Customs value = R 5150
   C) The requirement that the value of the carrier medium must be clearly distinguished from the data or instruction (intellectual value) was not compiled with. Therefore, the full invoiced price will form the basis for calculation of the Customs value.

| BND  | IMPORTS: Code “BND” and the amount that represents the duty and / or tax when goods are removed in bond must be inserted in this box. If goods are removed in bond by road – CPCs E 40 (WH), H 42 (WE), B 20 (RIB), B 21/22 (RIT), E 43 (XIB), and E 44 (XRW) – the total amount of the duty and VAT, per item to be lodged as surety must be inserted in this sub box. If the commodity does not attract any duty or VAT the amount should be reflected as zero (0).  
EXPOSITS: Goods removed in bond by road – CPCs H 67 (XE), F 53 (XES), H 68 (ZE) and F 52 (ZES):  
a) The abbreviation “BND” and the amount to cover the duty and / or VAT to be lodged as security needs to be inserted per CCD line item. If the commodity does not attract any VAT and / or duty the amount should be reflected as zero (0).

For example: the Customs client number of the bond owner is 12345600 and the bond number is “B”, the “BHR” value in the Additional Information field must be declared as “12345600B”. The “BND” details must always be reflected per line. This also applies to amended CCDs where an amendment is made on the first line of a CCD.  
c) Under cover of surety lodged by means of a Provisional Payment: the abbreviation “PPS” together with the amount, in rand, lodged must be declared in the Additional Information field on the first line of the CCD only. If IPC details are declared on a CPC B 22-00, the CCD will be outright rejected because the CPC relates to transit movements which are exempt from import control permit requirements. |
| IPP  | Where goods are cleared under CPC J 80 (GR / XGR) and the rebate item of the goods being declared is 470.01, 470.02, 470.03, or 498.00 the permit number issued by ITAC must be inserted per CCD line item. |
| KBC  | If “KBC” (Kimberly Certificate) is declared on diamond transactions there must be a certificate number declared in the additional info field. This transaction will be rejected if only “KBC” is declared without the certificate number. |

NUI | The import control regulations provide that all second-hand and used goods may only be imported into South Africa on the authority of an import permit issued by the International Trade Administration Commission (ITAC). Importers are required to indicate – in addition to import permit particulars – in the additional information field for each line of the import CCD whether the goods so declared are new, used or second-hand. Goods declared under CPC combinations within procedure category codes A, B, D, E, I, J, K, and L must indicate in the additional information field on each line of the CCD whether the goods are new, used or second-hand. The following abbreviations shall be used to indicate the status of the goods:
  a) For new goods – N
  b) For used goods – U, and
  c) For second-hand goods – S.
If the NUI indicator on a CCD, where rebate item 407.04 is used, is declared as “N”, the CCD will be outright rejected. The nature of rebate item 407.04 is that the vehicle cannot be new.

OLI | For goods cleared under CPC A 10, the ordinary levy items 196.10 or 196.20, whichever is applicable to the goods being declared, must be inserted.

PGR | The code requires the insertion of a value (example 12345678/QR1/2016-2017/ORG). The permit must be declared on each CCD line. The CCD will be outright rejected where:
  a) The permit(s) do not exist;

This field is mandatory for International imports and cross-border imports. Vehicles which will and cannot be registered for road use is exempted from this requirement, e.g. golf carts. Export CCDs with the VIN completed requires the additional information value to be completed to avoid the rejection of the CCD. Export CCDs containing VIN in the additional information field requires that the additional information value be completed to avoid the CCD be rejected.

VTE | a) The VTE (Value-Added Tax Exemption) Code and the reference number and date of such permission must be reflected in this box.
  b) Where substitution is granted and the importer elects not to pay the VAT a second time, the ‘VTE’ (Value-Added Tax Exemption) code and the reference number and date of the Branch Manager’s permission must be reflected in this box.

c) Traders must monitor the receipt of Customs message statuses, as the code will indicate not only the status, but also what the follow-up course of action will be. Most of these codes are self-explanatory, however, several sample scenarios are provided below to illustrate how they work in practice:

Declarant must make further submission of supporting documents once the appeal has been formulated. SARS may subsequently accept the motivation and close the case or may issue a further "request for amendment message" (26) if the appeal is upheld. If the appeal is upheld the declarant must lodge an amended CCD and penalty if applicable.

In regard to differentiating between status code 3 and 5, SARS will automatically issue a status 5 where the commodity code of the goods concerned requires that an OGA approve the release. It is therefore the declarant’s responsibility to ensure compliance with the OGA before the goods are uplifted.

9 WHERE OFFICE OF CLEARANCE DIFFER FROM THE LAND PORT OF EXIT

a) All land ports of entry, both international and BLNS will have the ability to process any type of CPC i.e. both CPCs associated with international trade as well as intra-BLNS CPCs.

b) The interchangeable use of international and intra-BLNS CPCs at land ports of entry is regulated by systems rules. For example:
   
i) An ex-warehouse clearance declared at Groblers Bridge will not be accepted by the Customs system because the warehouse concerned is not linked to the ports of entry/exit.
   
   ii) Traders must therefore declare such CCDs at the ‘Customs office’ (office of entry) where the particular warehouse is registered.

c) The Customs system will allow clearance of certain goods at inland ports destined for exit at land ports of exit. These instances pertain to the following CPCs:
   
i) B 20;
   ii) B 21;
   iii) E 43;
   iv) E 44;
   v) E 45;
   vi) F 52;
   vii) F 53;
   viii) H 67; and
   ix) H 68.

d) All import entries (direct and ex-warehouse) must have “Port Of Exit” if destined for any BLNS (Road).

e) For any direct import, where the ‘Mode of Transport’ is “Road” and ‘Previous Procedure’ code is “00”, then ‘District Office’ must be a land border. Inclusions to the above rule are direct re-importations covered by CPCs I 77-60/68/75, I 78-76 and L 91-90.

f) All direct export CCDs must have “Port Of Exit” if crossing any land port of exit by road and must equal “Office of Declaration”.

g) For Rail, transport mode 2, if a CCD is submitted to UPT (Office of Declaration), then the Office of Exit must also be UPT.

h) All ex-warehouse export CCDs must have “Port Of Exit” if crossing any land port of exit by road.

i) In regard to direct imports and export cross-border CCDs by road, Transport Code “00” will not be permitted.

j) On all CCDs where the goods removed by road and exiting a land port of exit, the ‘Road Manifest No.’ (Transport Document Number) must be inserted in the following format:

   i) Road Haulier client number assigned by BLNS at registration – (8AN); and
   ii) Manifest Number assigned by Road Haulier (AN27).
