

CUSTOMS & EXCISE

Fuel Combustion Non Stationary Source Environmental Levy Return for Carbon Tax

A. Licensee / Client particulars

| Warehouse number | Excise Client Code | Accounting Period |
|-------------------------------|--------------------|-------------------|
| Licensee | | To: |
| Company name Physical address | | TONI. |
| Physical address | | |
| | | |
| Postal Code | | |

- B. Carbon dioxide equivalent declaration (a non-Department of Environmental Affairs reporting methodology):
- B.1 Proxy formula for Emissions factor: $\{(C \times 1) + (M \times 23) + (N \times 296)\} / 1000 \times D = X$
- B.1.1 Use the prescribed Schedule for Carbon Tax Fuel Combustion Emission Factors Non-Stationary Source to calculate the Emission factor in Carbon Dioxide equivalent per tonne (X):

| Source | С | M | N | D | X | Α |
|-----------|---|-------------------------------------|---|------------------------------------|--|---------------------------------|
| Fuel Type | Carbon Dioxide Emissions CO ₂ (KGCO ₂ /TJ) | Methane Emissions CH4 (KGCH4/TJ) | Nitrous Oxide Emissions N ₂ O (KGN ₂ O/TJ) | Default calorific value (TJ/TONNE) | Emission factor in Carbon Dioxide equivalent per tonne | Declare mass expressed in tonne |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| Tota | ls | | | | | |

- B.2 Proxy formula for Emissions equivalent: (A x B) = E
- B.2.1 Use the Total of A (mass in tonne) multiplied by total of X (Emission factor) to calculate the Emission Equivalent:

| A | X | E |
|-------------------------|---------------------|-------------------------|
| Total mass in tonne (A) | Emission Factor (B) | Emission Equivalent (E) |
| | | |

c. The emission equivalent as reflected in DA180.01A.2 (E) above must be carried forward to the DA 180 (front page) to be inserted in the relevant Emission Equivalent field.
