# FOREWORD

## F OREWORD

The South African Revenue Service (SARS) was formally established on the 1st of October 1997, with the commencement of the South African Revenue Service Act no.34 of 1997. Tax revenues continue to fund the most significant portion of government expenditure, ensuring all the money due to the fiscus is collected, as highlighted in this 13<sup>th</sup> edition of the Tax Statistics publication.

Persistent weak economic growth has filtered through to less than expected revenue from taxes. Moreover, net Value-Added Tax collections have been lower due to the continuation of the acceleration of payments of VAT refunds and less VAT on imports. The government faces a revenue gap, which feeds through to the outer years of the medium-term expenditure framework.

Analysis of the main components of tax revenue shows that although 2019/20 personal income tax collections did not meet the 2019 Budget forecast, the decline is in line with moderating real wage growth in the economy. Similarly, domestic VAT collections and trade related taxes are in line with expected outcomes for consumption and imports. Corporate income tax, which is particularly volatile, was expected to significantly underperform.

Final revenue collection figures at R1 355.8bn reflects that 2019/20 recorded the largest tax revenue shortfall relative to budgeted estimates since 2009/10. In the 2020 Budget, the revised estimate was set at R1 358.9bn with the tax-to-GDP ratio estimated at 26.3%. Tax collection projections were vulnerable due to the weaker-than-expected economic performance.

The tax buoyancy ratio for 2019/20 is down from 1.31 (based on initial projected tax revenue of R1422.2bn) to an estimated 1.10. Risks to revenue collections remain disproportionately tilted heavily to the downside, as the economy is facing many headwinds.

The 2019 Budget Review sets out the tax proposals, most of which were implemented in the 2019/20 Financial Year and aim to set the context for revenue collected during the year:

- Raise an additional R15.0 billion in additional tax revenue in 2019/20. The proposals reflect government's commitment to narrow the budget deficit and stabilise debt;
- Increasing the tax-free threshold for personal income taxes from R78 150 to R79 000. No changes will be made to personal income tax brackets;
- The introduction of a Carbon Tax on fuel of 9c/litre; and
- Increasing the eligible income bands for the employment tax incentive.

# FOREWORD

The use of tax and customs administration data for improved policy formulation is crucial. There is no doubt that the effective use of tax data can increase compliance levels, enhance revenue collection and assist in the identification of new revenue opportunities. Furthermore, effective use of tax data provides opportunities to reach the untapped tax base and to increase the ease of doing business/transactions with SARS.

The recognition of the potential use of data generated through tax and trade administrative activities has led to increased interest by international bodies such as the African Tax Administration Forum (ATAF), the International Centre for Tax and Development (ICTD), the International Monetary Fund (IMF), the Organisation for Economic Cooperation and Development (OECD) and the United Nations University's World Institute for Development Economics Research (UNU-WIDER). SARS participates in the African Tax Outlook (ATO) and the Revenue Statistics in Africa publications.

This publication also illustrates that the role of SARS is not limited to the domestic economy but also extends to neighbouring countries through the Southern African Customs Union (SACU), which includes Botswana, Eswatini, Lesotho, Namibia, (BELN) and South Africa. A SACU Agreement has been established within which goods that are grown, produced or manufactured therein, on importation from one of the member states to another, are free of customs duties and quantitative restrictions.

SARS and National Treasury are committed to continuous improvement of the Tax Statistics publication and encourage feedback and engagements.

# ABOUT THIS PUBLICATION

## A BOUT THIS PUBLICATION

The 2020 edition of the Tax Statistics publication provides an overview of tax revenue collections and tax return information for the 2016 to 2019 tax years as well as the 2015/16 to 2019/20 fiscal years.

The objective of this publication is to present comprehensive tax revenue data in a manner that will complement and help contextualise economic and demographic data provided by other publications. It contains more detailed and varied tax revenue data that complements publications such as the National Treasury's Budget Reviews and SARS' Annual Reports. The aim is to improve and expand on the data made available in the previous Tax Statistics and to that end the 2020 edition.

Readers of the publication are also encouraged to use the explanatory content or guides that are published by SARS, in terms of the Tax Administration Act No.28 of 2011. These publications are aimed at providing practical guidance on the interpretation of the law.

The publication continues to look at the impact of policy changes with regard to the retirement funding reforms which became effective on 1 March 2016. Specifically considered is how the legislative change in which section 11F replaced section 11(k) of the Income Tax Act No.58 of 1962 affected the PIT taxable income base.

The publication follows the same format as previous years and is set out as follows:

- *Chapter 1: Revenue Collections* provides a summary of aggregate tax revenue collection trends from 2015/16 to 2019/20.
- *Chapter 2: Personal Income Tax (PIT)* gives an overview of assessed personal income tax revenues of registered individual taxpayers. It also provides information about taxable income by income group, age, gender, municipality of residence and source of income, as well as fringe benefits, allowances and deductions.
- *Chapter 3: Company Income Tax (CIT)* gives an overview of company income tax revenues. Information about taxable income by income group, sector and type of business entity as declared in the tax returns is also provided.
- *Chapter 4: Value-Added Tax (VAT)* provides a breakdown of VAT liabilities, receipts and refunds, by sector and payment category, as well as an overview of data on input and output VAT as derived from VAT returns submitted by vendors.

# ABOUT THIS PUBLICATION

- *Chapter 5: Import VAT and Customs duties* provides information about the customs value of imported goods by product type, according to the Harmonised System (HS) at chapter level, as well as Import VAT, Customs duty and *Ad valorem* excise duty revenues on imported goods.
- *Chapter 6: Other Taxes and Collections* provides information about taxes such as Capital Gains Tax (CGT), Transfer Duty, Diesel refunds, Mineral and Petroleum Resources Royalty (MPRR), as well as Southern African Customs Union (SACU) payments.
- The *Glossary* and *Index* contain definitions of terms and abbreviations as well as a list of all tables and figures in the publication.

## METHODOLOGY

- All statistics are based on the income, expenses, deductions and items as reported by taxpayers and traders in tax returns and assessment documents.
- Data has been evaluated for reasonability and any identified outliers have been excluded from these statistics.
- Nominal figures are used throughout the publication.
- Disaggregated income tax data is based on assessed PIT and CIT returns as extracted from SARS' systems at the end of July and October 2020 respectively. Given the time delay in the submission of tax returns by some taxpayers, and the time taken to assess such returns, statistics for later years tend to be less complete than those of earlier years.
- Given the time-lag between the close of a tax year and the filing of returns for that tax year, an estimate is applied to determine the proportion of expected tax returns to be filed for a specific tax year. More detail about how this estimate is determined is provided in Chapters 2 and 3 that address PIT and CIT, respectively.
- Declarations data for Import VAT and Customs Duties in this document, mainly discussed in Chapter 5, was extracted as at end of August 2020.
- Information about the sector (industry) in which taxpayers operate is drawn from taxpayer returns and is determined according to their main source of income. Trade classification data is based on the classification as declared by traders and is based on the Harmonised System.
- Figures have been rounded, therefore discrepancies may occur between the numbers of the component items and the totals in the tables.
- A hyphen (“-”) in the tables represents zero while a zero symbol (“0”) indicates the rounding of a numerical value that is greater than 0 and less than 0.5.
- The tax year for individuals starts on 1 March and finishes at the end of February the following year. The tax year for companies coincides with the financial year of the company for financial reporting purposes.

# ABOUT THIS PUBLICATION

- A distinction is made between a tax year and a fiscal year. The former is shown as a single year (e.g. 2016) while the latter is displayed with a forward slash (e.g. 2019/20).
- Tables numbered with an “A” (e.g. *Table A1.1.1*) are included at the end of the relevant chapter.

A full electronic version of this publication (including the Excel tables) is available for download on the websites of the South African Revenue Service (SARS) (<http://www.sars.gov.za/About/SATaxSystem/Pages/Tax-Statistics.aspx>) and that of National Treasury (<http://www.treasury.gov.za/publications/tax%20statistics/default.aspx>).

We welcome comments and suggestions that would enhance the value of the publication for policy evaluation and provide further insights into South Africa’s social and economic contexts. Please email such comments and suggestions to [taxstatistics@sars.gov.za](mailto:taxstatistics@sars.gov.za).

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

For the 2019/20 fiscal year

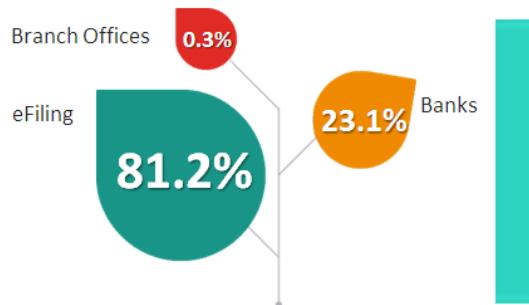

Composition of main sources of tax revenue

### Payment Channels

**The value of payments at banks reduced from 23.8% in 2015/16 to 23.1% in 2019/20**

### COST OF REVENUE COLLECTION

**0.96%**  
2015/16  

**0.80%**  
2019/20  

**TOTAL TAX RELIEF**  
provided to  
taxpayers between  
2015/16 and 2019/20

**R92.3 BILLION**

## 1 REVENUE COLLECTIONS

### KEY FACTS

In the 2019/20 fiscal year:

- Tax revenue collected amounted to R1 355.8 billion, growing year-on-year by R68.1 billion (5.3%), mainly supported by Personal Income Tax (PIT) which grew by R35.3 billion (7.2%);
- Nominal tax revenue grew at a compound annual growth rate of 6.1% for the period 2015/16 to 2019/20. The tax-to-GDP ratio has remained stable over the same period, averaging around 26.0%, with increased contributions from PIT;
- The cost of revenue collection ratio decreased further from 0.84% in 2018/19 to 0.80% in 2019/20; and
- The number of individuals registered for Income Tax increased to 22.9 million on 31 March 2020 from 22.2 million in the previous year. This represents a year-on-year growth of 3.4%. On 31 March 2020 there were 2.5 million registered companies (of which about 832 996 submit income tax returns) and 831 821 registered VAT vendors of which 449 597 (55.0%) were active.

### INTRODUCTION

The South African Revenue Service Act No. 34 of 1997 mandates SARS to:

- Collect all revenue due to the fiscus;
- Ensure compliance with tax and customs legislation; and
- Provide a Customs service that maximises revenue collections, protects our borders and facilitates trade.

For the financial year ending 31 March 2020, SARS collected a net amount of R1 355.8 billion, with Personal Income Tax (PIT), Corporate Income Tax (CIT) and Value-Added tax (VAT) in aggregate remaining the largest sources of tax revenue. In 2019/20, these taxes comprise about 80.0% of total tax revenue collections, with PIT accounting for around 39.0% of total revenue.

## REVENUE COLLECTIONS

The ratio of tax collection to GDP is a standard measure of a country's overall tax burden. The tax-to-GDP ratio has increased marginally from 25.9% in 2015/16 to 26.3% in 2019/20, an increase of 0.4 percentage points. This chapter gives an overview of:

- South Africa's tax system;
- Tax register;
- Tax policy;
- Budget and consolidated revenue;
- Main indicators of revenue performance;
- Tax revenue by main category;
- Cost of revenue collection; and
- Distribution by payment channels and monthly tax revenue.

### SOUTH AFRICA'S TAX SYSTEM

South Africa has a residence-based tax system. Residents, subject to certain exclusions, are taxed on their worldwide income irrespective of where it was earned. Non-residents are taxed only on their income from a South African source, subject to the relief provided under Double Taxation Agreements (DTAs). Foreign taxes proved to be payable are deducted from South African tax payable on foreign income.

### TAX REGISTER

SARS continues to broaden the tax base and expand the register through the **9 Strategic Objectives** of the Voluntary Compliance model:

1. Provide **Clarity and Certainty** of tax obligations;
2. Make it **Easy for Taxpayers and Traders to Comply** and fulfil their obligations;
3. Detect Taxpayers and Traders who do not comply, and **make non-compliance hard and costly**;
4. **Develop** a high performing, diverse, agile and engaged workforce towards **high value knowledge and service work**;
5. **Expand and increase the use of data** to improve integrity, derive insight and improve outcomes;
6. **Modernize our systems** to provide digital and streamlined services;
7. **Drive greater resource stewardship** to ensure the efficient use of resources, and deliver quality outcomes and performance excellence;
8. **Work with, and through Stakeholders** to improve the tax system; and
9. **Build public trust and confidence** in the tax administration system.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

The growth of the tax register is influenced by socio-economic conditions, tax policy and legislative amendments. SARS has increased registration compliance by continuing to provide bulk registration at places of employment and providing an online facility that enables employers to register staff when submitting their monthly Pay-As-You-Earn (PAYE) returns. Accurate taxpayer registers enables SARS to effectively manage the taxpayer base.

The number of individuals, companies, trusts, employers and VAT vendors as well as importers and exporters registered with SARS is shown in *Table 1.1*. Of significance are the following observed trends:

- The number of individuals registered for PIT increased by 3.4% from 22.2 million in 2018/19 to 22.9 million in 2019/20. Growth during the past few years was mainly driven by the revised employer filing and employee registration process introduced by SARS in 2010. This requires employers to register all individuals and issue them with an IRP5 or IT3(a) certificate regardless of the amount of income earned;
- The number of companies registered for Income Tax has increased from 2.0 million in 2018/19 to 2.5 million in 2019/20 as companies became active and continued to register at the Companies and Intellectual Property Commission (CIPC) with the latest average registration time of 1.45 days published for the 2018/19 financial year, an improvement from 1.78 days in 2017/18;
- The number of registered trusts has increased by 1.7% from 357 859 in 2018/19 to 363 860 in 2019/20;
- The number of employers registered for PAYE grew by 5.4% to 582 289 in 2019/20;
- The number of vendors registered for VAT increased by 3.6% to 831 821; and
- Year-on-year growth of registered importers and exporters was 3.1% to 329 820 and 3.1% to 297 448 respectively.

**Table 1.1: Tax register, 31 March 2016 - 31 March 2020**

Number as at	Individuals <sup>1, 2</sup>	Companies (CIT) <sup>1, 3</sup>	Trusts <sup>1</sup>	Employers <sup>1</sup> (PAYE)	VAT Vendors <sup>1</sup>	Importers	Exporters

1. Excludes cases where status is in suspense, estate and address unknown.

2. The tax year for individuals starts on 1 March and ends at the end of February the following year.

3. The tax year for companies is normally the financial year of the company for financial reporting purposes.

4. Different from Annual Report due to timing difference

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

### TAX POLICY

#### Tax relief

The 2019 Budget tax proposals were designed to increase revenue collections. Revenue measures were expected to raise an additional R15.0 billion in 2019/20. The proposals reflected government's commitment to narrow the budget deficit and stabilise debt. The weak economic environment fed through to lower collections in tax revenue. To limit the negative impact on economic growth, the 2019 Budget proposals did not increase any tax rates.

PIT was expected to contribute R13.8 billion through not fully adjusting the income tax brackets for inflation. *Table 1.2* shows the effect of tax proposals over this period, with negative values indicating tax relief.

**Table 1.2: Summary effects of tax proposals, 2015/16 - 2019/20**

R million	Direct taxes				Indirect taxes				Other	Total Tax relief
	PIT	CIT	Other	Total	Excise	Fuel levy	Other	Total		
2015/16	–	-150	100	-50	1 835	6 490	–	8 325	–	8 275
2016/17	-5 650	1 000	100	-4 550	2 284	6 800	–	9 084	456	4 990
2017/18	16 516	–	6 374	22 891	1 936	3 197	–	5 133		28 024
2018/19	7 510	-350	150	7 310	2 360	1 220	25 110	28 690	–	36 000

<b>Total</b>	<b>32 176</b>	<b>500</b>	<b>6 724</b>	<b>39 401</b>	<b>9 415</b>	<b>17 207</b>	<b>25 810</b>	<b>52 432</b>	<b>456</b>	<b>92 289</b>

More details on the Budget tax proposals for each fiscal year can be found in the Budget Review documents available on National Treasury's website at:

<http://www.treasury.gov.za/documents/national%20budget/default.aspx>.

#### Tax rates

The maximum marginal tax rates across most tax types are shown in *Table 1.3* below. The marginal tax rate for PIT has increased from 41% to 45%, effective from 1 March 2017. As at 22 February 2017, the Dividends Tax rate increased from 15% to 20%. The maximum tax rate for Transfer Duty increased from 11% for the value of property transactions above R2.25 million to 13% for the value of property above R10 million effective for acquisitions from 1 March 2016. The VAT standard rate was increased by one percentage point to 15% from 1 April 2018.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

Table 1.3: Maximum marginal tax rates, 2015/16 - 2019/20

Percentage	PIT <sup>1</sup>	CIT	DT <sup>2</sup>	VAT <sup>3</sup>	Transfer duty <sup>4</sup>
01 Apr 2015 – 28 Feb 2016	41.0%	28.0%	15.0%	14.0%	11.0%
01 Mar 2016 – 21 Feb 2017	41.0%	28.0%	15.0%	14.0%	<b>13.0%</b>
22 Feb 2017 – 28 Feb 2017	41.0%	28.0%	<b>20.0%</b>	14.0%	13.0%
01 Mar 2017 – 31 Mar 2017	<b>45.0%</b>	28.0%	20.0%	14.0%	13.0%
01 Apr 2017 – 31 Mar 2018	45.0%	28.0%	20.0%	14.0%	13.0%
01 Apr 2018 – 31 Mar 2019	45.0%	28.0%	20.0%	<b>15.0%</b>	13.0%
01 Apr 2019 – 31 Mar 2020	45.0%	28.0%	20.0%	15.0%	13.0%

1. An individual's tax year starts on 01 March and ends at the end of February the following year.

The marginal rate for Individuals increased from 40% to 41% with effect from 01 March 2015 and from 41% to 45% on 01 March 2017.

2. The rate of DT has increased on 22 February 2017 to 20%.

3. VAT rate increased from 14% to 15% as from 01 April 2018.

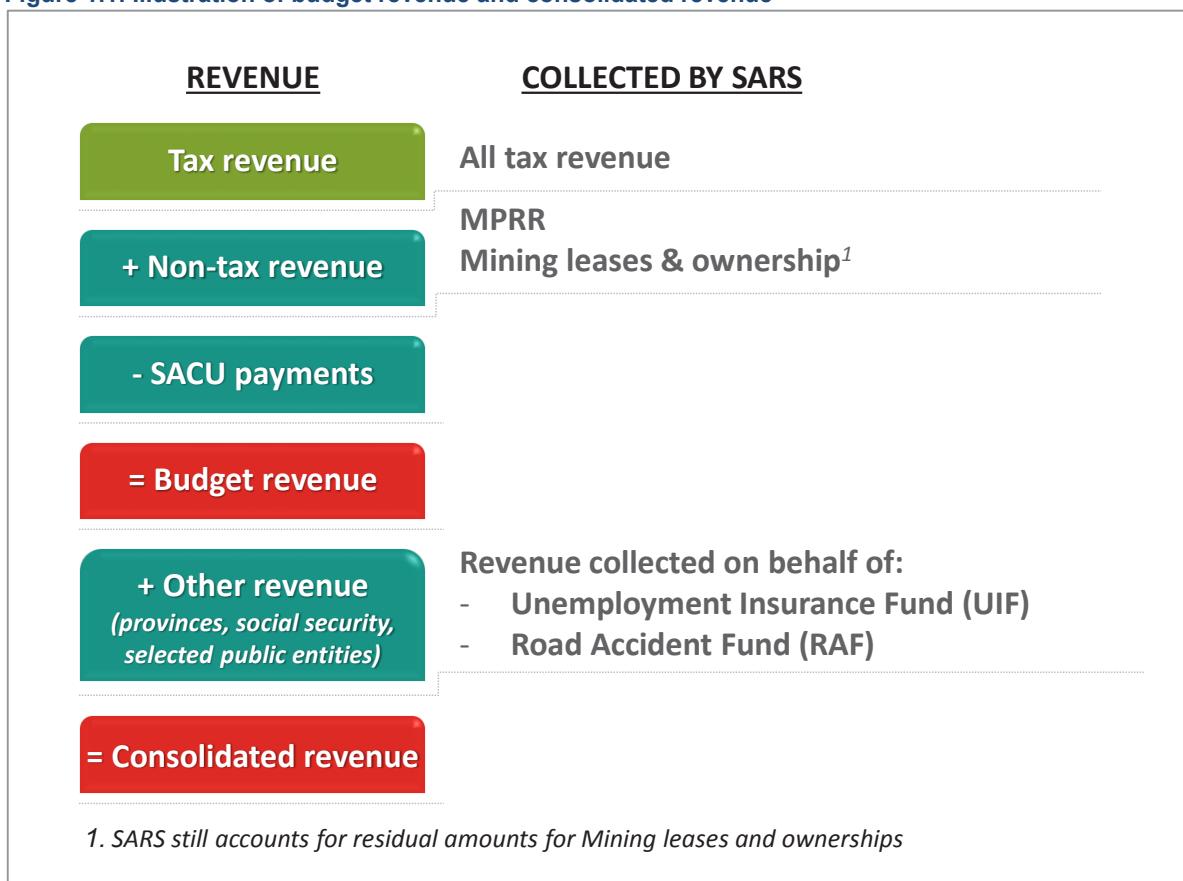

4. Transfer Duty highest rate increased from 8% to 11% with effect from 01 March 2015 and from 11% to 13% with effect from 01 March 2016.

## BUDGET AND CONSOLIDATED REVENUE

National budget revenue includes all revenue streams into the fiscus, both tax revenue and non-tax revenue, and is reduced by payments made to Botswana, Eswatini, Lesotho and Namibia (BELN) in terms of the Southern African Customs Union (SACU) agreement. SACU disbursements are determined according to a revenue sharing formula described in Chapter 6.

Consolidated revenue also includes revenue collected by the provinces and selected public entities as well as social security contributions. This is illustrated in *Figure 1.1*.

Figure 1.1: Illustration of budget revenue and consolidated revenue

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

Table 1.4 shows the total budget revenue and consolidated revenue over the past five fiscal years.

**Table 1.4: Total budget revenue and consolidated revenue, 2015/16 - 2019/20**

R million	Tax revenue	% of budget revenue	% of consolidated revenue	Non-tax revenue <sup>1</sup>	Total tax and non-tax revenue	Less: SACU payments	Budget revenue	Other <sup>2</sup>	Consolidated revenue
2014/15	986 295	102.2%	90.0%	30 900	1 017 195	-51 738	965 457	129 865	1 095 322

2019/20	1 355 766	100.8%	89.3%	39 834	1 395 601	-50 280	1 345 320	172 192	1 517 512

1. Includes interest, dividends, rent on land, sales of goods and services, fines and penalties, sales of capital assets, financial transactions in assets and liabilities, MPRR as well as extraordinary receipts.

2. Includes provinces, social security and selected public entities.

In addition to tax revenue, SARS collects Mineral and Petroleum Resources Royalties (MPRR) as well as Mining Leases and Ownership which are included in non-tax revenue. SARS also collects revenue on behalf of the Road Accident Fund (RAF) and the Unemployment Insurance Fund (UIF).

## MAIN INDICATORS OF REVENUE PERFORMANCE

### Compounded Annual Growth Rate (CAGR)

Total tax revenue collected by SARS increased from R1 070 billion in 2015/16 to R1 355.8 billion in 2019/20, maintaining a CAGR of 6.1% over that period. This is below the CAGR of 9.7%, which was achieved in the previous period of 2010/11 to 2015/16.

**Table 1.5: Nominal tax collections, 2000/01 - 2019/20**

R million	Individuals <sup>2</sup>	CAGR <sup>1</sup>	Companies <sup>2</sup>	CAGR <sup>1</sup>	Value-added Tax	CAGR <sup>1</sup>	Tax Revenue	CAGR <sup>1</sup>
2000/01	85 884		20 972		48 377		201 266	
2005/06	125 645	7.9%	86 161	32.7%	114 352	18.8%	417 196	15.7%
2010/11	226 925	12.6%	132 902	9.1%	183 571	9.9%	674 183	10.1%

1. Compounded annual growth rate (percentage)

2. Excludes interest on overdue income tax as in Table A1.4.1.

### Tax-to-GDP ratio

The part of a country's output that is collected by the government through taxes, the tax-to-GDP ratio, is an important indicator to measure the tax effort of government. It is used internationally, by among others the International Monetary Fund (IMF), the World Bank, the Organisation for Economic Co-operation and Development (OECD) and the African Tax Administration Forum (ATAF), in the comparative analysis of the tax systems and economic performance of different countries.

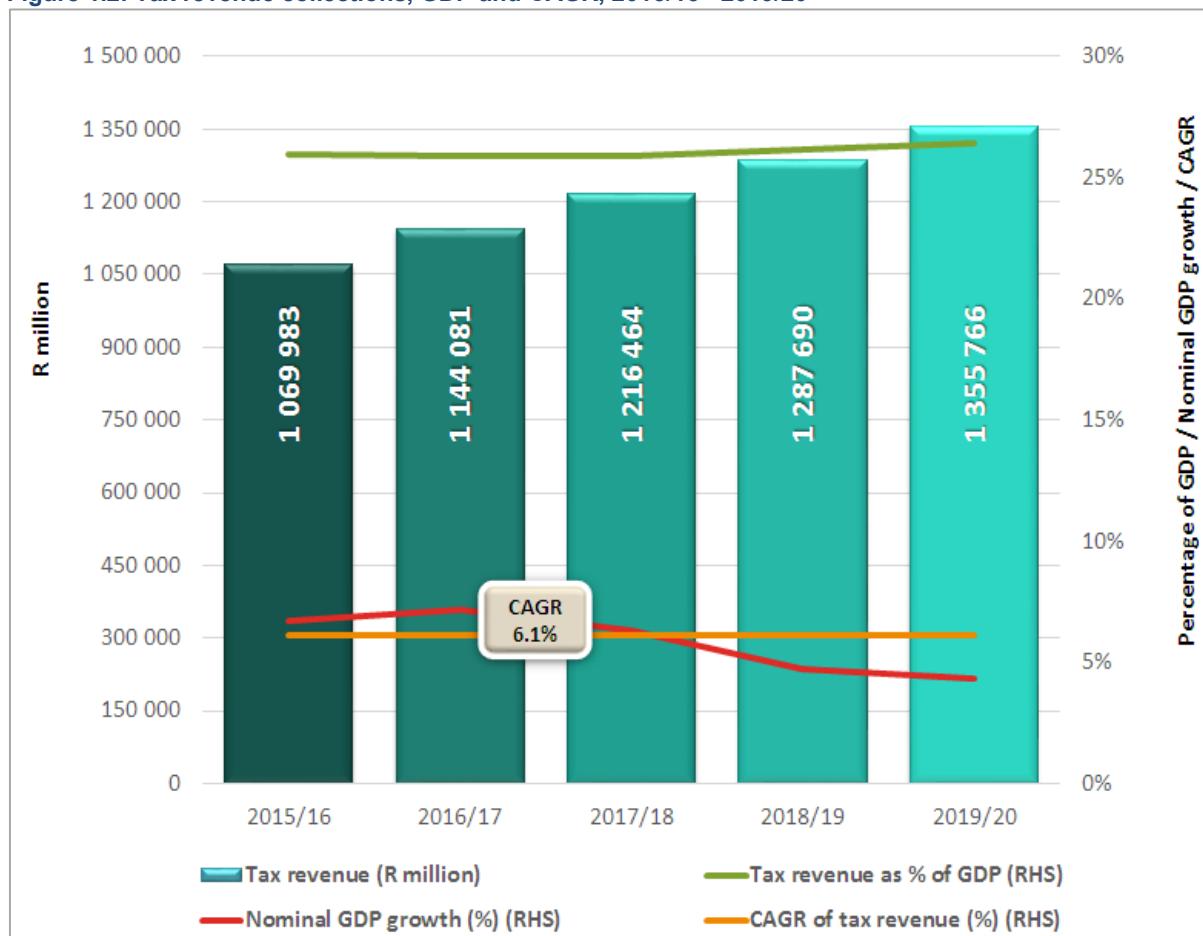

Figure 1.2 displays tax revenue as a percentage of GDP together with the CAGR, since 2015/16 until 2019/20. Over this period, nominal tax revenue grew at a compound annual growth rate of 6.1%.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

The tax-to-GDP ratio has increased marginally from 25.9% in 2015/16 to 26.3% in 2019/20, driven by increased contributions from PIT and VAT.

Figure 1.2: Tax revenue collections, GDP and CAGR, 2015/16 - 2019/20

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

Table 1.6 shows tax revenue as a percentage of GDP since 1994/95.

**Table 1.6: Tax revenue as a percentage of GDP, 1997/98 - 2019/20**

R million	Tax revenue	Nominal GDP <sup>1</sup>	Tax revenue as % of GDP

### Tax buoyancy

An important indicator of tax revenue performance is the tax buoyancy ratio. This indicator measures the sensitivity of tax revenues to changes in economic growth. Buoyancy of tax revenue reflects both the effect of automatic stabilisers and of discretionary fiscal policy changes. A buoyancy ratio greater than unity (1.0) over the long-term supports the sustainability of fiscal policy. Short-term buoyancy ratios fluctuate more and are the outcome of the stage of the business cycle, tax policy changes and efficiency of tax administration.

South African tax revenue collections have remained buoyant after the 2008/09 financial crisis despite tough economic conditions. However, in 2016/17 growth in total tax revenue collections did not keep up with economic growth, resulting in a buoyancy ratio of 0.97. In 2017/18 tax revenue growth was on par with GDP growth resulting in buoyancy ratio of 1.0.

# REVENUE COLLECTIONS

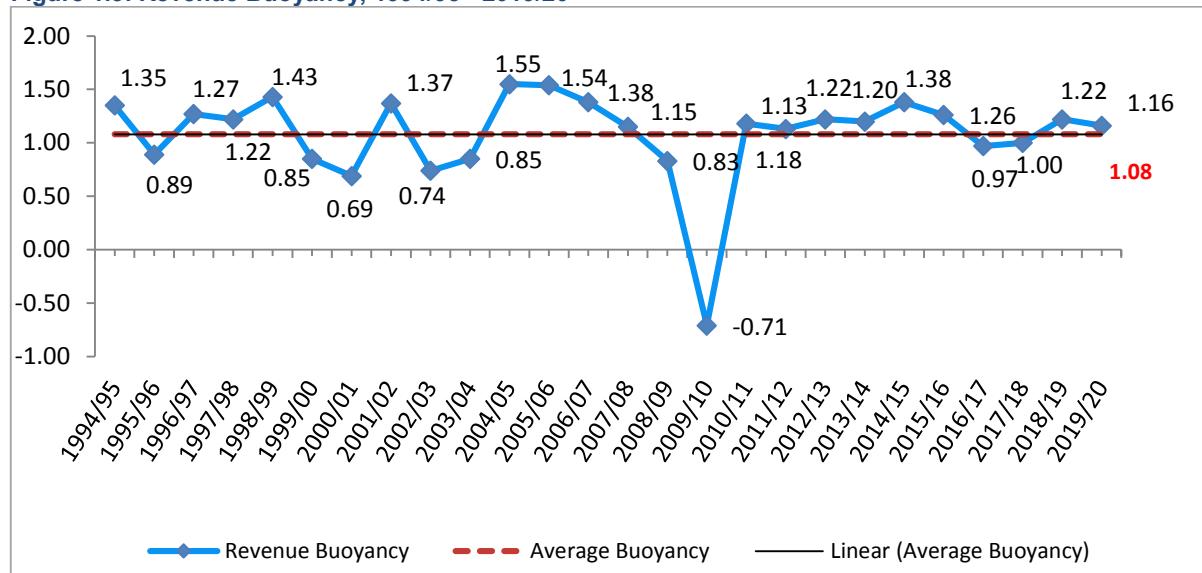

## REVENUE COLLECTIONS

Both years' buoyancy were lower than the long-term average of 1.08. The less than one buoyancy ratios are mainly due to lower relative collections in taxes on income and profits given weak economic activity.

Total tax revenue buoyancy for 2019/20 was 1.16, lower than the 1.22 in 2018/19, as a result of slower growth in the main taxes.

Buoyancy ratios of the various taxes are different depending on the structure of the taxes; for example, PIT, a progressive tax, has a buoyancy ratio greater than unity, while CIT being a proportional tax is more volatile with higher/lower buoyancy ratios in an expanding/contracting economy. VAT, a proportional tax, tends to have a buoyancy ratio close to unity when the system is broad-based. Specific excise duties need to be adjusted for inflation annually to ensure buoyancy ratios close to unity.

**Figure 1.3: Revenue Buoyancy, 1994/95 - 2019/20**

### Main sources of tax revenue and Tax-to-GDP ratio

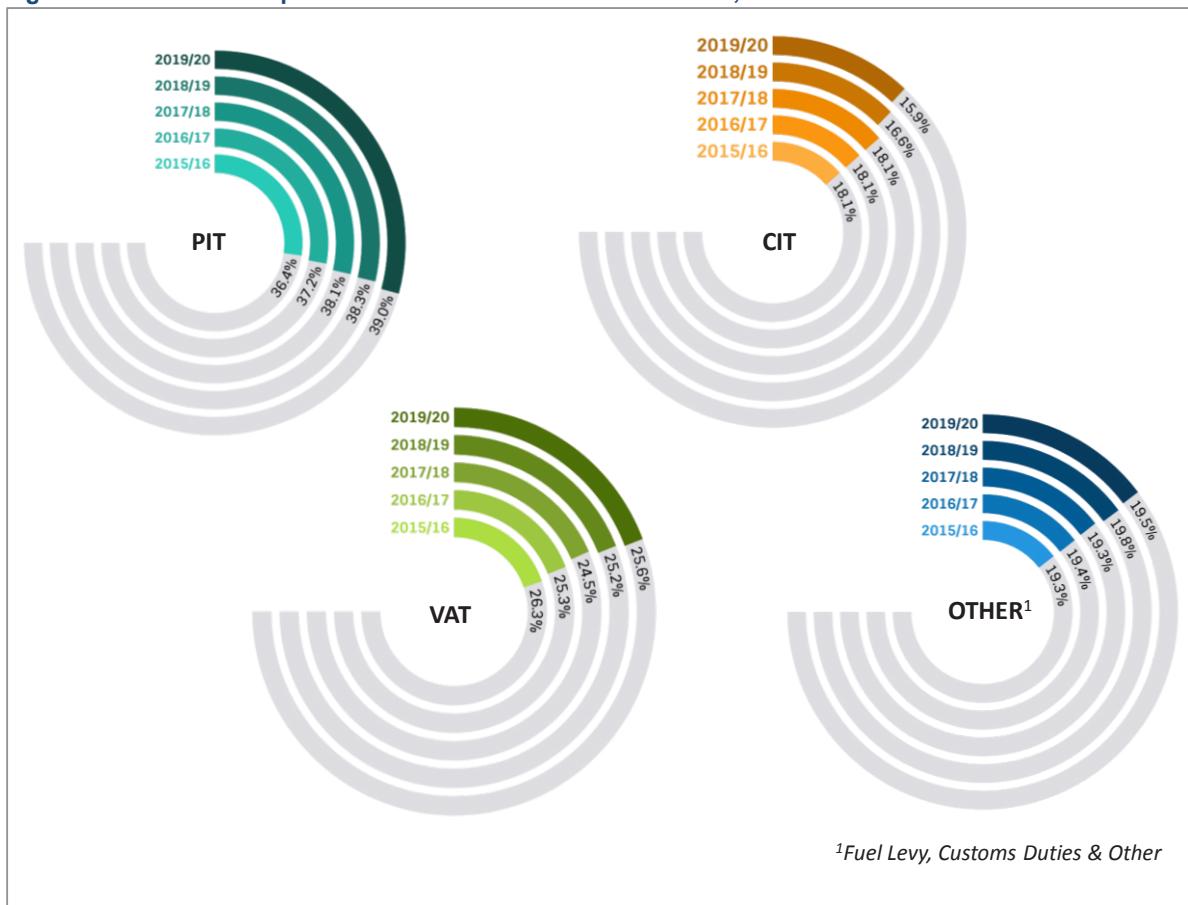

PIT, CIT and VAT account for about 80% of total tax revenue. The fuel levy, together with specific excise and Customs Duties, accounts for around 14% and other taxes make up the remainder.

Over the last five years the relative PIT contribution has shown a steady increase whilst the relative contribution of CIT to the total tax revenue has declined (*Figure 1.4 and Table A1.2.1*). The relative contribution of VAT has decreased from 26.3% in 2015/16 to 24.5% in 2017/18 and subsequently has increased to the 25.6% in the year under review.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

Figure 1.4: Relative composition of main sources of tax revenue, 2015/16 - 2019/20

The global financial crisis of 2008/09 had a significant impact on all tax types, but its main impact was felt in the subsequent significant reduction and the slow recovery of CIT as companies struggled to return to profitability, with many carrying large assessed losses. Post the financial crisis, the relative contribution of CIT to total tax revenue continues on a negative trajectory and has now declined even further to a low of 15.9% in 2019/20 after dropping to 16.6% in 2018/19 from 18.1% in the preceding three fiscal years (2015/16 - 2017/18).

The contribution of PIT to total tax revenue increased from 36.4% in 2015/16 to 39.0% in 2019/20. The extent of the shift is supported by the fact that PIT contribution to total tax revenue is higher than CIT with PIT contributions exceeding CIT by R195.9 billion in 2015/16 and significantly higher in 2019/20 with PIT contribution R314.2 billion more than CIT. Figure 1.5 shows the main sources of tax revenue as a percentage of GDP.

Year on year growth in CIT is known for volatility, even in relation to its approximated tax base, net operating surplus. CIT collections as a percentage of GDP declined slightly from 4.8% in 2012/13 to remain constant at 4.7% for the three fiscal years 2015/16 - 2017/18.

The volatility in commodity prices, the fluctuating exchange rate and the downgrading of some major banks and insurance companies to junk status in 2017/18 had an adverse impact on CIT collections due to the lag effect.

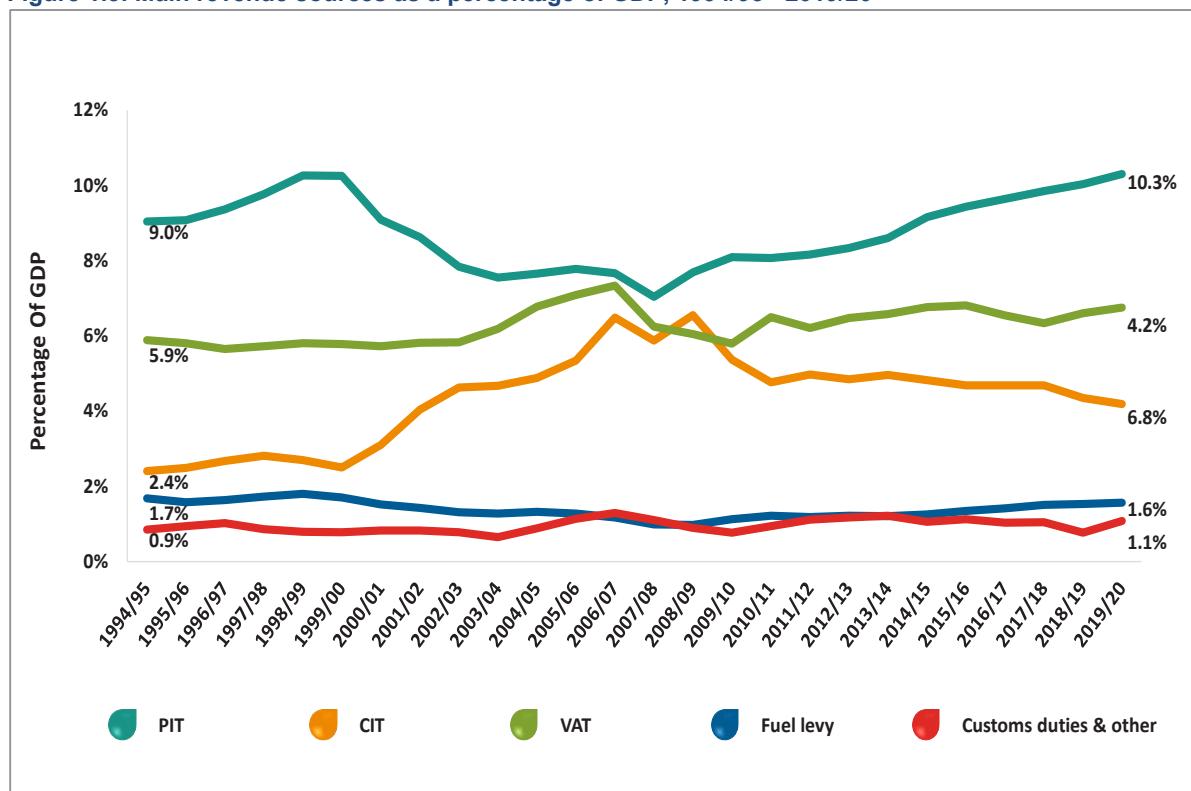

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

The ratio dropped further to 4.4% in 2018/19 financial year mainly due to contractions in some sub-sectors of the manufacturing industries such as petroleum, basic iron and steel as well as metal, which were affected by power outages in Q1-2019.

The construction sector also contributed to the decline as it continues to struggle and has been impacted by the government's (the biggest spender) budget cuts of infrastructure spending. The ratio currently stands at 4.2% in the 2019/20 financial year, a further drop from the 2018/19 financial year. The overall performance in CIT provisional tax payments (a major contributor to CIT) was negatively impacted by the contraction in the major contributing sectors, specifically in the Finance as well as the Manufacturing for the Large Business segment, following weak business and consumer confidence, and exacerbated by the unreliable electricity supply.

**Figure 1.5: Main revenue sources as a percentage of GDP, 1994/95 - 2019/20**

## TAX REVENUE BY MAIN CATEGORY

South Africa subscribes to the Government Finance Statistics (GFS) classification of revenue as prescribed by the International Monetary Fund (IMF).

According to the GFS classification, tax revenue comprises of taxes on income and profits; taxes on payroll and workforce; taxes on property; domestic taxes on goods and services; taxes on international trade and transactions as well as revenue allocated to the state miscellaneous revenue category. *Table A1.3.1* shows the main categories of tax revenue.

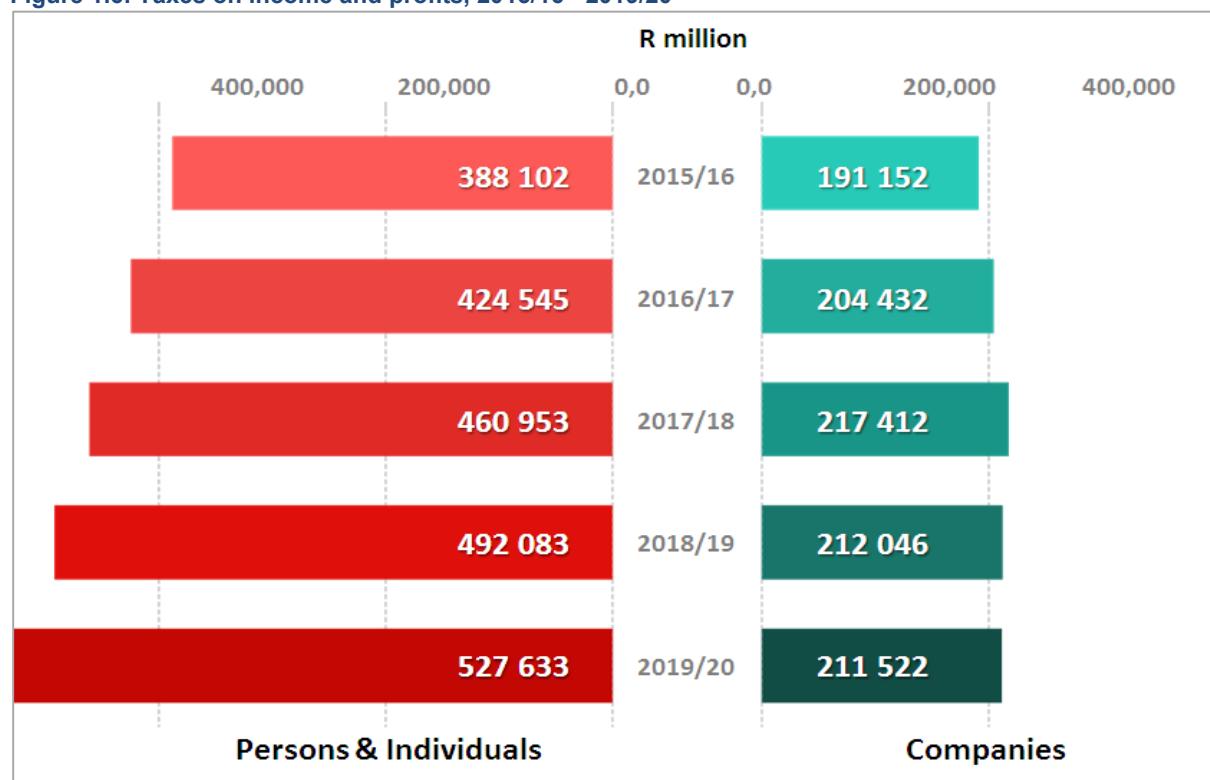

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

- *Taxes on income and profits* constitute the largest category of tax revenue and accounted for 57.0% of total tax revenue in 2019/20. This category comprises taxes on persons and individuals; taxes on companies (both inclusive of CGT and withholding tax on royalties); Interest on overdue income tax; dividends tax and withholding tax on interest. Figure 1.6 shows the main taxes in this category.

*Table A1.4.1* contains a summary of the taxes on income and profits, while *Tables A1.4.2* and *A1.4.3* provide further details of taxes on persons and individuals and taxes on companies. Chapters 2 and 3 contain more detailed information on PIT and CIT.

**Figure 1.6: Taxes on income and profits, 2015/16 - 2019/20**

- *Taxes on payroll and workforce* comprise of the Skills Development Levy (SDL). This is a compulsory levy intended to fund training costs incurred by employers. SARS administers the collection of this levy in conjunction with the Department of Employment and Labour.
- *Taxes on property*, as shown in *Table A1.5.1*, comprise of Donations tax, Estate Duty, Securities Transfer Tax (STT) and Transfer Duties.
  - *Donations tax* is levied at a rate of 20% on the value of a donation. With effect from 1 March 2018 the rate was increased to 25% of the value of cumulative donations exceeding R30 million. An annual exemption of R100 000 is available to natural persons.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

- *Estate Duty* is levied at a rate of the dutiable amount of a deceased estate. Estate duty is levied on property of residents and South African property of non-residents less allowable deductions. With effect from 1 March 2018 the duty is levied on the dutiable value of an estate at a rate of 20% on the first R30 million and at a rate of 25% above R30 million.
- *Securities transfer tax (STT)* is levied at a rate of 0.25% on every transfer of a security.
- *Transfer Duty* is the largest source of revenue in this category. It is levied on the acquisition of property as defined; at a progressive rate for all persons including companies, close corporations and trusts. As of 1 March 2016, a marginal rate of 13% applies to the portion of the value of property exceeding R10 million. There were no rate and value-band changes for the current year.
- *Domestic taxes on goods and services* comprise of VAT, specific excise duties, *ad valorem* excise duties, Universal Services Fund levy, Turnover Tax on micro businesses and environmental taxes including the fuel levy. *Table A1.6.1* provides a summary of the collections of domestic taxes on goods and services.
  - *VAT* is the largest source of revenue in this category with a share of 70.4% in 2019/20 (Figure 1.7). VAT is levied at a flat rate on goods and services, with some exemptions and zero-ratings, and is also levied on the importation of goods and services into South Africa. The VAT rate on the supply of goods and services was increased with effect from 1 April 2018 from 14% to 15%.

Figure 1.7: Value-Added Tax (VAT), 2015/16 - 2019/20

*Table A1.6.2* gives a breakdown of VAT collections by Domestic VAT payments, Import VAT and VAT refunds. Further details are provided in Chapters 4 and 5.

- *The carbon fuel levy (carbon tax on fuel levy)* became effective from 05 June 2019; this was levied on imported and domestically produced fuel at 9c/litre on petrol and 10c/litre on diesel. The Budget 2019 indicated that Diesel refunds cannot be claimed against this tax. See *Table A1.7.2* for the contribution of carbon fuel levy to total Fuel Levy in 2019/20.

## REVENUE COLLECTIONS

- *Environmental taxes* as shown in *Table 1.7* comprise of the Tyre levy, Plastic bag levy, Electricity levy, Incandescent light bulb levy and CO<sub>2</sub> tax on motor vehicle emissions. The South African Government has responded to the serious global challenge of climate change by introducing several environmental taxes that are intended to modify the behaviour of the country's inhabitants for sustainable development of the economy.
  - *The Tyre levy* was implemented on 1 February 2017 due to the disposal of tyres that is littering the environment. New pneumatic tyres are subject to the payment of the tyre levy (an environmental levy) if used in South Africa and is payable by manufacturers in South Africa. The levy is calculated on the nett mass of the tyre.
  - *The Plastic bag levy* was introduced in June 2004, at a rate of 3 cents a bag on some types of plastic shopping bags, with the aim of reducing littering and encouraging plastic bag reuse. The levy was increased to 4 cents a bag from 1 April 2009, 6 cents a bag from 1 April 2013, 8 cents a bag from 1 April 2016, 12 cents a bag. From 1 April 2018 and further increased again to 25 cents a bag from 1 April 2020.
  - *The Electricity levy* was introduced in July 2009 at a rate of 2 cents per kWh. It applies to electricity generated from non-renewable sources. The latest increase in the rate of the levy was on 1 July 2012, when it was increased to 3.5 cents per kWh.
  - *The Incandescent light bulb levy* was introduced on 1 November 2009 at a rate of R3 per bulb, to promote energy efficiency and reduce electricity demand by encouraging the use of energy-saving light bulbs. Energy-saving light bulbs last longer and require less electricity. The use of these light bulbs thus helps reduce "greenhouse gas" emissions. The levy increased to R4 a bulb from 1 April 2013, R6 a bulb from 1 April 2016, R8 per bulb from 1 April 2018 and further to R10 per bulb from 1 April 2020.
  - *CO<sub>2</sub> tax on motor vehicle emissions* was introduced in September 2010 for passenger vehicles and in March 2011 for double-cab vehicles. The main objective of this tax is to encourage owners of motor vehicles in South Africa to become more energy efficient and environmentally friendly. The tax on emissions on passenger vehicles increased, from a rate of R75 to R90 on 1 April 2013, to R100 per gCO<sub>2</sub>/km for each gram of emissions above 120 gCO<sub>2</sub>/km on 1 April 2016 and increased again to R110 on 1 April 2018. For double-cab vehicles the rate of R100 increased to R125, R140 and R150 per gCO<sub>2</sub>/km for each gram of emissions above 175 gCO<sub>2</sub>/km on those dates. From 1 April 2020, the threshold was adjusted from 120 gCO<sub>2</sub>/km to 95 gCO<sub>2</sub>/km for passenger cars and the emissions tax rates increased to R120 per gCO<sub>2</sub>/km for passenger cars and R160 gCO<sub>2</sub>/km for double cabs.

## REVENUE COLLECTIONS

Table 1.7 shows the environmental tax collections for the past five years.

**Table 1.7: Environmental taxes, 2015/16-2019/20**

R million	Tyre Levy <sup>1</sup>	Plastic bag levy	Electricity levy	Incandescent light bulb levy	CO <sub>2</sub> tax on motor vehicle emissions	Total
2015/16	–	183	8 472	52	1 277	9 984
2016/17	77	232	8 458	70	1 209	10 046
2017/18	716	241	8 501	55	1 337	10 850
2018/19	730	300	8 404	41	1 390	10 866
2019/20	708	318	8 291	34	1 327	10 678

1. The Tyre levy was introduced with effect from 1 February 2017.

- *The Health Promotion Levy* was implemented on 1 April 2018. It is a levy imposed on sugary beverages in support of the Department of Health's deliverables to decrease diabetes, obesity and other related diseases in South Africa. Levy collections are shown in Table 1.8. The Health Promotion Levy applies to beverages with more than 4 grams of sugar content per 100ml. The levy is payable by manufacturers thereof in the Republic of South Africa (RSA), is a domestic consumption tax, and is therefore not payable on sugary beverages that are exported or processed in the manufacture of other dutiable goods. It is payable on sugary beverages manufactured in, or imported into South Africa, specifically:
  - Identified imported products are taxed when they are cleared for home consumption.
  - Locally manufactured products are taxed at source.

**Table 1.8: Health Promotion levy, 2019/20**

R million	Printed estimate Feb 2019	Revised estimate Feb 2020	Actual result	Increase / decrease on Printed estimate	Increase / decrease on Revised estimate
Health promotion levy <sup>1</sup>	1 986	2 590	2 446	460	-144
Health promotion levy on imports	245	54	67	-179	12
<b>Total Health promotion levy</b>	<b>2 231</b>	<b>2 644</b>	<b>2 513</b>	<b>281</b>	<b>-132</b>

1. Levy on locally manufactured products

- *Taxes on international trade and transactions* comprise of import related taxes and export duties. Import duties are duties imposed on goods imported into South Africa and are intended to protect local producers. This category also includes miscellaneous Customs and Excise receipts that have not yet been allocated to the appropriate import tax types as well as revenue from smaller subcategories. Also included in this category is the Diamond Export Levy that is imposed to stimulate the local diamond polishing industry. Further details are contained in Chapter 5. *Table A1.7.1* provides a summary of taxes on international trade and transactions.
- *State miscellaneous revenue* comprises of revenue received by SARS that cannot be allocated to specific revenue types.

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

### COST OF REVENUE COLLECTION

The cost of tax revenue collection is an important indicator of the efficiency of revenue administrations and may be used for comparative analysis when benchmarking against administrations in other countries. This ratio is calculated by dividing the cost of the internal operations of a revenue authority by total tax revenue collected.

This ratio does not include the non-tax revenue and social security contributions collected by SARS such as MPRR, UIF contributions and RAF levies. If these amounts are included in the cost of revenue collection, then the cost-to-revenue ratio will be even lower.

SARS' cost-to-tax-revenue ratio is below the international benchmark of 1.0%. During the past five years, the ratio has ranged between 0.96% in 2015/16 and 0.89% in 2017/18 and moved to a low of 0.80% in 2019/20. This consistent performance shows that SARS has contained costs, while increasing the amount of revenue it has collected. The management of costs has also been informed by budget adjustments in pursuit of fiscal sustainability for the state.

Table 1.9: Cost of revenue collection, 2015/16 - 2019/20

R million	Tax revenue collected	Operating cost <sup>1</sup>	Cost of collection <sup>2</sup>
2015/16	1 069 983	10 245	0.96%
2016/17	1 144 081	10 696	0.93%
2017/18	1 216 464	10 795	0.89%
2018/19	1 287 690	10 792	0.84%
2019/20	1 355 766	10 841	0.80%

1. Operating cost as disclosed in the Statement of Financial Performance for the controlling entity in the SARS: Own Accounts Annual Financial Statements.

2. Operating cost as a percentage of tax revenue.

### DISTRIBUTION BY PAYMENT CHANNELS AND MONTHLY TAX REVENUE

#### Payment channels used for SARS collections

Through Automation and Digital Migration, SARS has reduced the volumes of manual activity and significantly improved turnaround times. Cash collections at branch offices and the associated risks have been significantly reduced.

Current payment methods other than branch payments are:

- *eFiling*: This requires a taxpayer to register as an eFiling client in order to make electronic payments using this channel; and
- *Payments at banks*: Taxpayers can make either an internet banking transfer or an over-the-counter deposit.

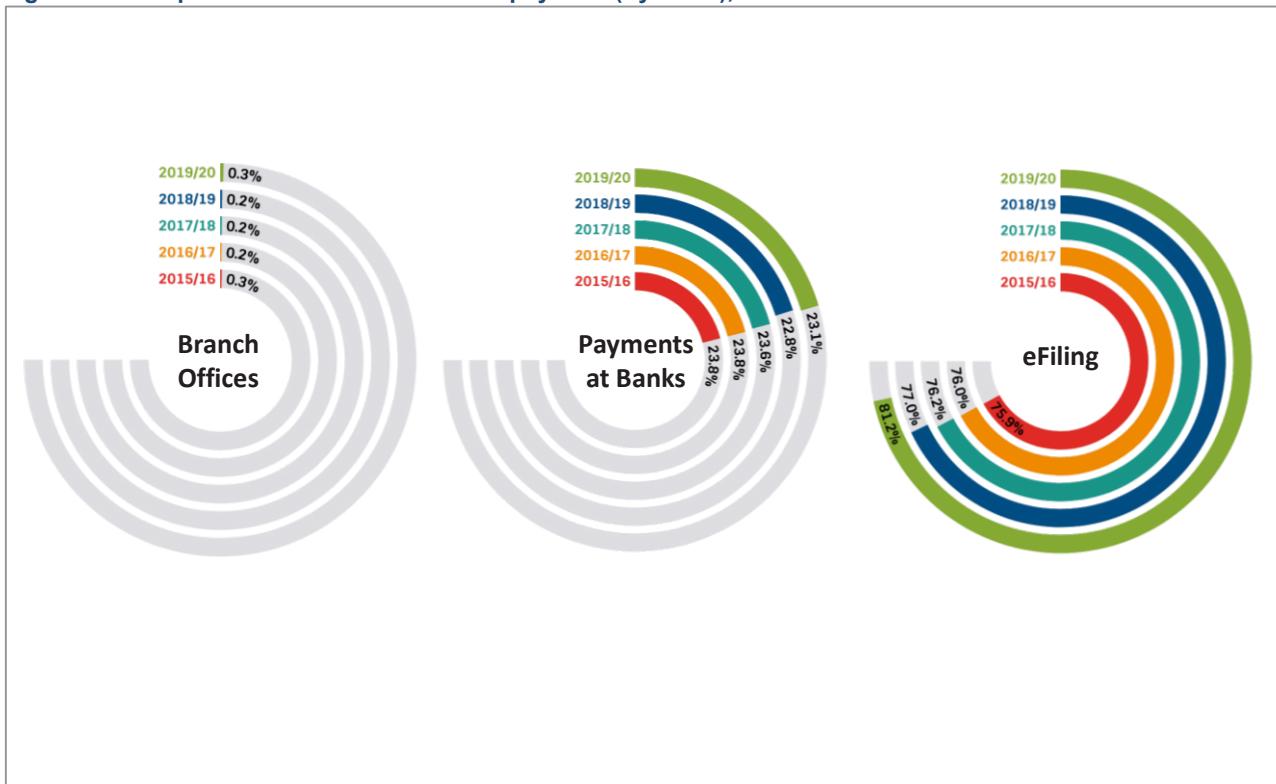

The eFiling payments channel constitutes the majority of payments received by SARS and accounted for 81.2% of the total value of all taxpayer payments in 2019/20. This is an improvement compared to 2015/16 when this channel accounted for 75.9% of the total value of payments processed.

# REVENUE COLLECTIONS

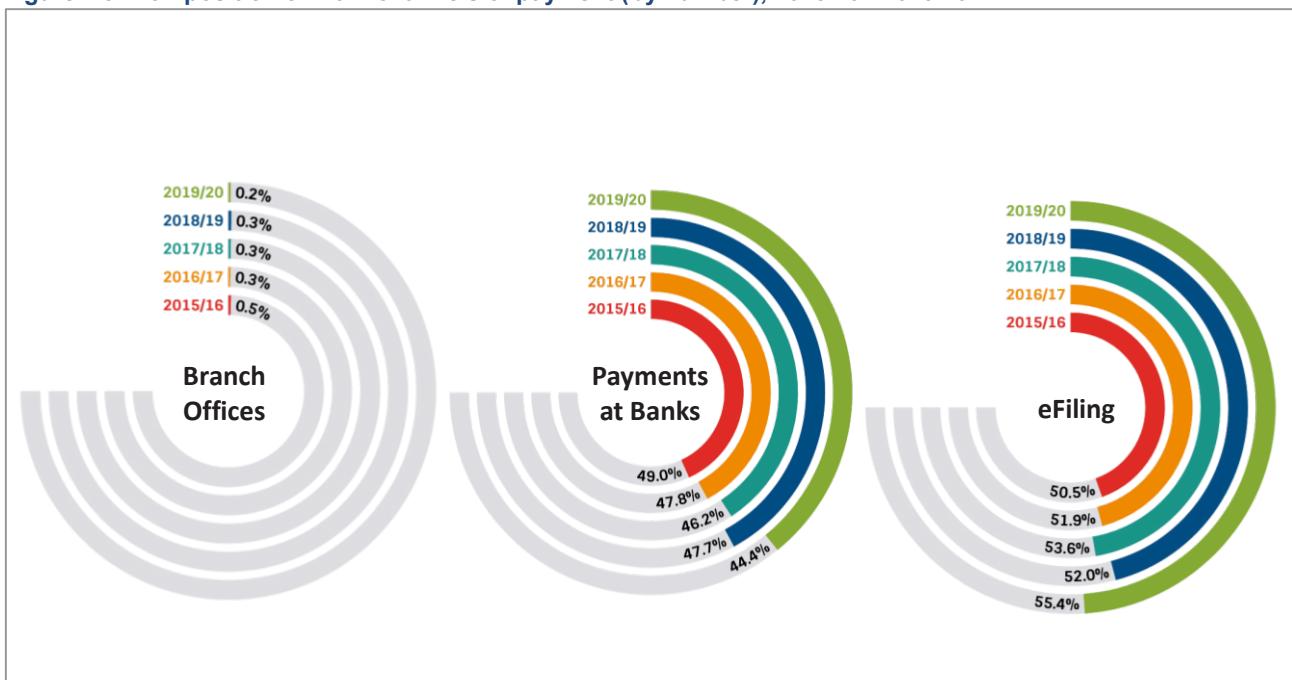

## REVENUE COLLECTIONS

The composition of the main channels of payment is shown in *Figures 1.8 and 1.9*.

**Figure 1.8: Composition of main channels of payment (by value), 2015/16 - 2019/20**

**Figure 1.9: Composition of main channels of payment (by number), 2015/16 - 2019/20**

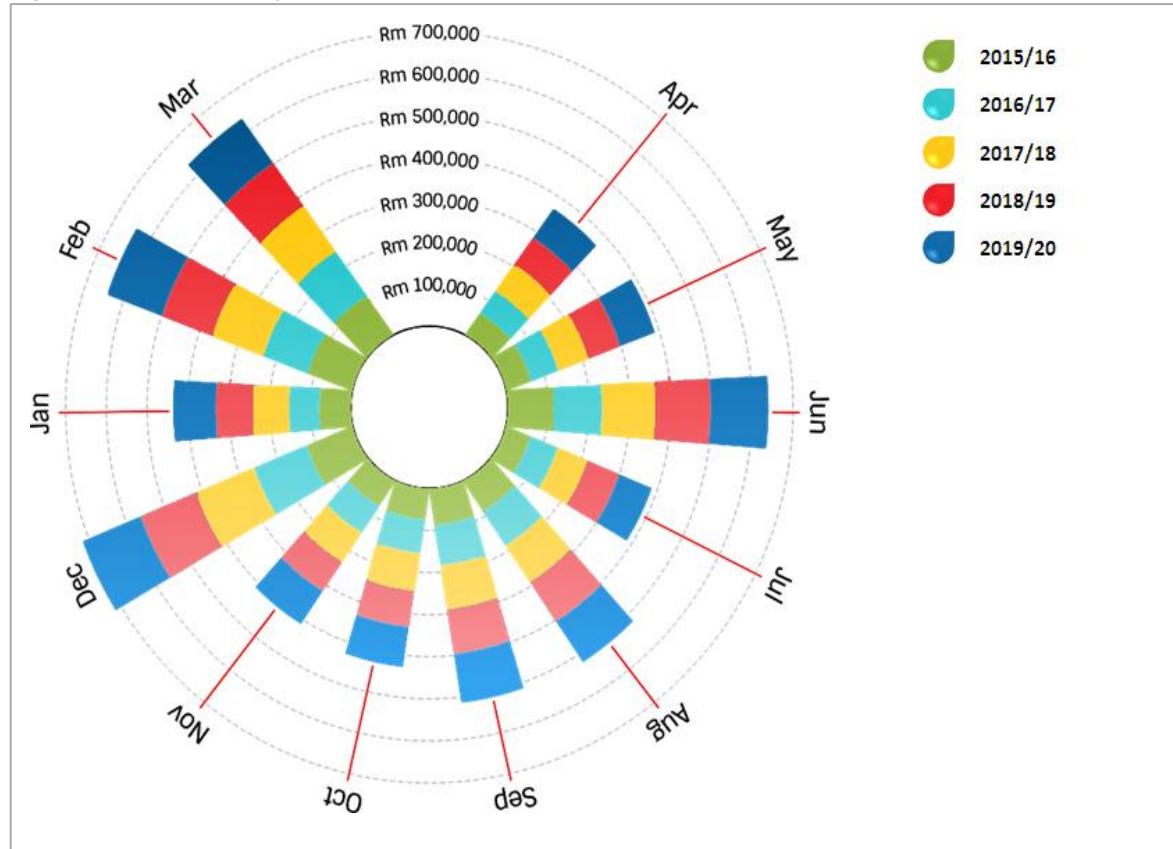

# REVENUE COLLECTIONS

## REVENUE COLLECTIONS

Changes to the SARS payment rules prescribed that from the beginning of 2011/12 SARS would no longer process VAT or PAYE payments of more than R100 000 at SARS branch offices. This was later reduced to R50 000 in August 2014 and extended to all tax products. The revised payment rules resulted in growth in the use of electronic payment channels and in the rapid decline in payments made at branch offices. The value of payments at branch offices in 2019/20 has increased to 0.3% of all taxpayer payments from 0.2% in 2018/19.

Figure 1.10 and Table A1.1.1 show the net monthly and quarterly trends in the collection of tax revenues. The peaks in June, December, February and March are mainly due to CIT provisional payments from companies with year-ends that coincide with these months.

**Figure 1.10: Net monthly tax revenue collections, 2015/16 - 2019/20**

Travel was the largest allowance at **R28.8billion** (26.3% of total allowances assessed).

Contributions to pension, provident and retirement annuity funds was the largest deduction at **R181.3billion** (83.4% of all deductions granted).

Pension, provident and retirement annuity contributions paid on behalf of employees was the largest fringe benefit at **R102.0billion** (59.8% of the total fringe benefits assessed).

Cohort across 10 consecutive years

2009

2018

**2 938 297**  
Taxpayers assessed for all tax years 2009 - 2018

Municipalities

Statistics available on assessed tax for individual taxpayers in 213 municipalities, reduced from 234 reported in the 2016 publication as a result of merging municipalities during the past year.

1. The finance sector refers to the Financial intermediation, insurance, real-estate and business services sector, which includes the following SARS sectors – Agencies and other services; Financing, insurance, real estate and business services; Long term insurance; and Research and scientific institutes

## 2 PERSONAL INCOME TAX

### KEY FACTS

- The Budget presented in February 2018 included:
  - Increases of 6.1%, 4.1% and 4.4% respectively in the primary, secondary and tertiary rebates to R14 067, R7 713 and R2 574 respectively. This increased the tax thresholds for taxpayers below the age of 65 to R78 150, for those 65-74 years to R121 000 and 75 years and older to R135 300.
- SARS received more than 18.8 million employees' tax certificates (IRP5s) that could be linked to nearly 13.4 million individuals.
- Assessed data for individual taxpayers shows that, of the 6 308 515 taxpayers expected to submit returns for the 2018/19 tax year, 4 337 923 (68.8%) have been assessed (based on data available at the end of October 2020).
- A demographic and geographic analysis of the assessments at the time of the data extracted for release of this publication shows:
  - 1 776 301 (40.9%) of assessed taxpayers were registered in Gauteng;
  - 580 464 of assessed taxpayers lived in the Johannesburg Metro and were taxed on an average taxable income of R512 785;
  - 1 171 410 (27.0%) of assessed taxpayers were aged between 35 to 44 years; and
  - 2 352 902 (54.2%) of assessed taxpayers were male; 1 985 021 (45.8%) were female.
- The assessed taxpayers had aggregate taxable income of R1.6 trillion and a tax liability of R360.0 billion. Their average tax rate was 22.5% compared to 21.6% in the previous tax year.
- Income from salaries, wages and other remuneration as well as pension, overtime and annuities accounted for 77.6% of total taxable income.
- The travel allowance of R28.8 billion at 26.3% of total allowances was the largest of the allowances assessed.
- Pension, provident fund and retirement annuity contributions paid on behalf of employees at R102.0 billion was the largest fringe benefit received by individuals. This represented 59.8% of the total fringe benefits assessed.
- Contributions to retirement funding (pension, provident and retirement annuity funds) were the largest deduction at R181.3 billion (83.4%).
- By 31 March 2019, the PIT register had grown to 22.2 million individuals.

# PERSONAL INCOME TAX

## INTRODUCTION

Personal Income Tax (PIT) is South Africa's largest source of tax revenue and contributed 39.0% of the total tax revenue collections in 2019/20, reflecting an increase of 0.7% from the contribution share of 38.3% in 2018/19.

PIT is a tax levied on the taxable income (gross income less exemptions and allowable deductions) of individuals and trusts. It is determined for a specific year of assessment. Taxable capital gains form part of taxable income.

PIT collections comprise of three different streams:

- Employees' Tax (PAYE) collected by employers on behalf of employees;
- Provisional tax (payable by any person who derives income other than remuneration, an allowance or advance); and
- Assessed tax which is paid on final assessment.

Most individuals receive their income as salaries or wages, pension or annuity payments and investment income (interest, taxable dividends or capital gains). Income from salaries, wages and other remuneration accounted for 78.0% of total taxable income. Some individuals also have business income, making them provisional taxpayers.

This chapter provides an overview of:

- IRP5 data for 2019;
- Personal income tax rates;
- Provisional tax payments;
- Tax returns and individual taxpayers' data;
- Taxable income and tax assessed;
- Employment tax incentive (ETI);
- Assessed individual taxpayers with business income; and
- Assessed individual taxpayers' allowances, fringe benefits and deductions.

## IRP5 DATA FOR 2019

In relation to the 2019 tax year, SARS received more than 18.8 million IRP5 certificates showing PAYE collection of R454.7 billion. As more than one IRP5 certificate can be issued to an individual, SARS applies a set of business rules to enable it to accurately identify the taxpayer named on the certificate and, where necessary, link all the IRP5 certificates issued to an individual. If any of the identification rules are not met, an individual's tax return is not pre-populated with information from the IRP5 certificates.

SARS identified nearly 13.4 million unique individuals. These unique individuals should not be regarded as an indication of the number of people working in the formal labour market. Some individuals who are not formally employed are also issued with IRP5 certificates. These include individuals who receive benefits from retirement funds or annuities. SARS could not link all the IRP5 certificates to specific individuals as some certificates were incorrectly completed by employers or contained inaccurate information.

# PERSONAL INCOME TAX

An analysis of the IRP5 certificates linked to the 13.4 million unique individuals identified by SARS reveals that 6.3 million were female taxpayers and 7.1 million were male taxpayers. Just over 7.3 million of individuals had certificates on which at least R1 or more of PAYE was deducted while 7.4 million individuals had certificates where no PAYE was deducted (for example taxpayers earning less than the tax threshold, independent contractor income and non-taxable amounts).

## PERSONAL INCOME TAX RATES

### Personal income tax brackets and thresholds

A top marginal income tax rate of 40% for individuals applied for 13 years until the increase to 41% for the 2016 tax year and thereafter to 45% for the 2018 tax year. Income tax brackets have been adjusted in part to compensate for the effect of inflation (fiscal drag). To assist low income earners, the tax brackets for lower income earners have been increased proportionally more than the higher income brackets.

*Table 2.1* shows the widening of the PIT income brackets between the 2016 and the 2019 tax years. The threshold of the 41% marginal rate PIT bracket in 2016 increased from R701 301 to R708 311 in 2019. This increase represents a CAGR of 0.3%. During this period the ceiling of the lowest PIT bracket rose from R181 900 in 2016 to R195 850 in 2019, or a CAGR of 2.5%. A 45% marginal tax rate was introduced in 2018 for taxable income above R1 500 000.

The primary rebate increased by 6.1% from the 2016 to the 2019 tax years. This resulted in a corresponding increase in the income tax threshold (the level of annual taxable income below which no income tax is payable) for individuals younger than 65 years from R73 650 to R78 150. The secondary rebate increased by 4.1% from R7 407 to R7 713. For individuals aged 65 to 74 years, the income tax threshold increased from R114 800 to R121 000, an increase of 5.4%. The tertiary rebate for taxpayers 75 years and older, increased by 4.4% from R2 466 to R2 574 and the income tax threshold for these individuals increased from R128 500 to R135 300, an increase of 5.3%.

# PERSONAL INCOME TAX

**Table 2.1: Personal Income Tax (PIT) brackets, 2016 and 2019**

Tax year Rand	2016		2019		Marginal PIT rates	Percentage increase in upper bracket	Percentage increase
Taxable income brackets	0	–	181 900	0	–	195 850	18.0%
	181 901	–	284 100	195 851	–	305 850	26.0%
	284 101	–	393 200	305 851	–	423 300	31.0%
	393 201	–	550 100	423 301	–	555 600	36.0%
	550 101	–	701 300	555 601	–	708 310	39.0%
	701 301	–	and over	708 311	–	1 500 000	41.0% <sup>1</sup>
				1 500 001	and over		45.0% <sup>1</sup>
<b>Rebates<sup>2</sup></b>							
Primary		13 257		14 067			6.1%
Secondary		7 407		7 713			4.1%
Tertiary		2 466		2 574			4.4%
<b>Tax thresholds</b>							
Below age 65		73 650		78 150			6.1%
Age 65 to below 75		114 800		121 000			5.4%
Age 75 and over		128 500		135 300			5.3%

1. Top marginal income tax rate of 40% applied for 13 years until the increase to 41% for the 2016 tax year. It increased again to 45% in the 2018 tax year.

2. Rebates are merely in existence to reduce the income tax due, but cannot result in a refund or credit.

## Tax relief

The tax burden aggregated across all taxpayers, as indicated by the tax assessed as a percentage of taxable income, increased from 20.4% in the 2016 tax year to 21.6% in the 2018 tax year and to 22.5% for the 2019 tax year, the period under review. The high increases for the 2018 and 2019 tax years are mainly the result of the increase from 41% to 45% in the top marginal income tax rate. The extent of tax relief, including “fiscal drag relief”<sup>1</sup>, is shown in *Figure 2.1* and illustrates the impact of tax relief over a period of 24 years. (1) An individual with taxable income of R100 000 in 1995 (2) was paying tax at an effective tax rate of 33.8%. (3) If the taxpayer’s taxable income had only kept pace with inflation (4) the effective tax rate would have increased to 40.7% in 2019 if there had been no adjustments made to the income tax brackets. The impact of the actual tax rate adjustments from 1995 for the same example (5) lowers the effective tax rate to only 19.8%. Note that real tax relief occurred in the period 2000 to 2010 after the broadening of the taxable income base.

*Table 2.2* shows the tax relief granted to individuals since 1995 across a range of income levels. Tax relief is much more prominent in the lower income groups. Lower income groups receive proportionately greater tax relief when the tax thresholds are raised.

<sup>1</sup> Fiscal drag relief granted to taxpayers to neutralize the impact of inflation on effective tax rates

# PERSONAL INCOME TAX

## PROVISIONAL TAX PAYMENTS

Any person who derives income other than remuneration, an allowance or advance as described in section 8(1) of the Income Tax Act 58 of 1962, is a provisional taxpayer. Provisional tax is not a separate tax. It is a method of paying tax due to ensure the taxpayer does not have to pay large amounts on assessment, as the tax liability is spread over the relevant year of assessment. It requires provisional taxpayers to pay at least two amounts in advance during the year of assessment. The amounts are based on estimated taxable income after deducting employees' tax. A third payment is optional after the end of the tax year, but before the issuing of the assessment. Final liability, however, is determined on assessment. The employees' tax and provisional tax payments already made, reduces the liability for normal tax for the applicable year of assessment.

In 2019/20, provisional tax payments by individuals contributed 5.9% to net PIT collections (*Table A1.4.2 in Chapter 1 of this Publication*). The 80% rule, as set out in the Fourth Schedule to the Income Tax Act, requires taxpayers with taxable income of more than R1 million to settle at least 80% of their tax liability by the time they make their second provisional tax payment.

The impact of this rule on provisional tax payment trends is shown in *Table 2.3*. Whilst it is clear from this table that taxpayers adhere to the abovementioned rules, SARS follows processes to make sure that it is maintained. Insufficient payment and/or underestimation of taxable income may lead to penalties and interest.

**Table 2.3: Provisional tax payments<sup>1</sup> by provisional period, 2016 – 2019**

Period Tax year	1st Provisional period (R million)	Percentage change	2nd Provisional period (R million)	Percentage change	3rd Provisional period (R million)	Percentage change	Total

1. Provisional tax payments above include only payments from individuals.

## TAX RETURNS AND INDIVIDUAL TAXPAYERS' DATA

### Tax register

During 2010 SARS changed its registration policy and stipulated that everyone formally employed, regardless of their tax liability, must be registered for PIT. If employees are not registered, it is the duty of their employer to register them with SARS. As a result, the tax register grew from 5.9 million as at 31 March 2010 (not reflected in the table below) to 22.2 million as at 31 March 2019 (*Table 2.4*). Not all of the registered taxpayers are paying tax, e.g. those below the income tax threshold.

31-Mar-18	21 104 375	5.6%	2018	6 594 651	5 372 211	81.5%
31-Mar-19	22 170 546	5.1%	2019	6 308 515	4 337 923	68.8%

1. Number of individuals registered at 31 March of each year (active cases excluding cases where status is in suspense, dormant, estate, insolvent, inactive or address unknown). The register for the year ending March 2018 differs from the register in the 2018/19 Annual Report as a result of a different reporting date used in the Annual Report (31 January 2018).

2. The number of taxpayers who are expected to submit a return for a specific tax year. Cases can be on the register and active for other years but not active for a specific tax year.

## Expected submissions and assessed individual taxpayers

The proportion of returns that have been received by SARS is more accurately measured against the number of returns expected to be submitted than against the number of taxpayers on the register. Some individuals are not required to submit a return because their earnings are below the income tax threshold or they are unemployed or they are below the compulsory submission threshold.

In February 2014 the International Monetary Fund (IMF) launched the Tax Administration Diagnostic Assessment Tool (TADAT) that defines the filing rate for CIT and PIT as the extent to which returns expected from registered taxpayers are filed. A similar interpretation has been adopted in this publication. There are many individual taxpayers currently submitting returns who are below the compulsory submission threshold. These taxpayers are therefore not liable to submit a return but still elect to submit a return, possibly to recover tax deducted as they may qualify for refunds that the employer was not aware of.

The submission taxable income threshold was R250 000 for the 2013 tax year and was increased to R350 000 from the 2015 tax year and once again to R500 000 in the 2019 tax year (see *Notice 342 of 2019 published in Government Gazette, 28 June 2019*). These changes in the submission threshold may have impacted on the accuracy of the expected submissions to different years.

Expected submission counts for each tax year include all taxpayers who have been assessed for a tax year as well as taxpayers with an “active” status who were assessed in any of the two previous years. The number of individuals expected to submit income tax returns was 6.8 million in the 2016 tax year. This decreased to 6.3 million in 2019, due to the increase in the threshold for submission of returns mentioned earlier. Based on data available at the end of October 2020, 85.7% of expected return submissions for 2016 had been assessed while 85.0% had been assessed for 2017, 81.5% for 2018 and 68.8% for 2019. In later years, the level of assessment for any given tax year increases as more outstanding returns are submitted and processed.

Taking into account the income tax return submission rules published in the Government Gazette for the 2018 and 2019 tax years, the estimation of the number of individuals required to submit returns amounts to 2 000 000 for the 2019 tax year; a 12.3% reduction from a total of 2 280 000 estimated for the 2018 tax year. The decrease is linked to the increased submission taxable income threshold to R500 000 in the 2019 tax year. There are however taxpayers who are not required to submit but they continue to do so mainly in order to receive a refund.

# PERSONAL INCOME TAX

The total of these taxpayers were estimated at 1 760 000 for the 2019 tax year compared to 1 940 000 taxpayers for the 2018 tax year, bringing the total expected submission for the 2018 tax year to 4 220 000 and for the 2019 tax year to 3 760 000. The number of assessments issued for the 2018 tax year as at the end of October 2020, were 5 857 738, one million more than expected, being the number of taxpayers choosing to submit returns but not necessary required to.

The statistics in the remainder of this chapter are based on assessments issued by SARS.

## TAXABLE INCOME AND TAX ASSESSED

Table 2.5 shows a summary of the number of individual taxpayers assessed, as well as their taxable income and the tax assessed.

**Table 2.5: Summary of assessed individual taxpayers, taxable income and tax assessed, 2016 - 2019**

Tax year	Number of taxpayers assessed	Taxable income (R million)	Average taxable income (R)	Tax assessed (R million)	Average tax assessed (R)	Tax assessed as % of taxable income
2016	5 857 738	1 650 199	281 713	336 950	57 522	20.4%
2017	5 746 248	1 724 781	300 158	356 805	62 094	20.7%
2018	5 372 211	1 750 496	325 843	377 463	70 262	21.6%
2019	4 337 923	1 598 811	368 566	360 024	82 994	22.5%

Tax assessed as a percentage of taxable income increased from 20.4% in the 2016 tax year to 22.5% in the 2019 tax year. The effective income tax rate increased to 21.6% in 2018 and further increased to 22.5% in 2019 mainly as a result of the increase of the top marginal tax rate from 41.0% to 45.0%. Capital gains tax on financial emigration by individuals also contributed to the increase in taxable income.

Average taxable income increased by 6.5% in 2017, by 8.6% in 2018 and 13.1% in the 2019 year. The number of taxpayers assessed with income below R500 000, was lower compared to previous years.

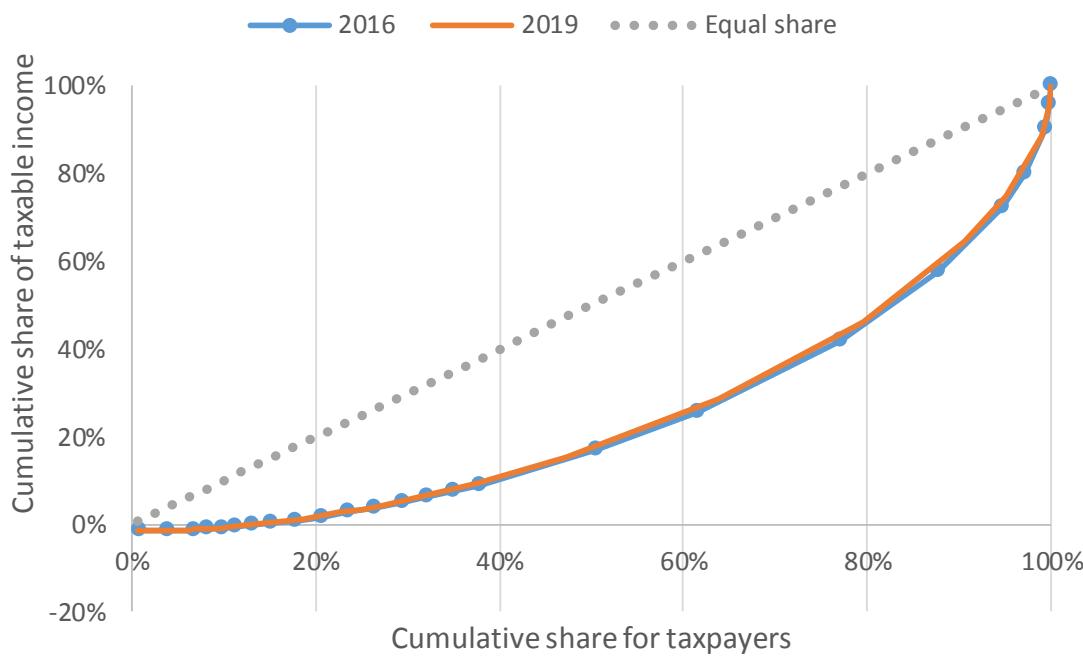

### Personal income tax concentration curves

Concentration curves are graphical representations of data that measure the degree of inequality and differences of inequality over time. The key two variables in the concentration curves below are the share of taxable income and tax liability against the cumulative share for personal income taxpayers.

The concentration curves for taxable income for the tax periods 2016 and 2019 based on assessed taxpayers, depict an improvement in the distribution of taxable income, see Graph 1. Tax policy measures over this period to broaden the taxable income base and increase the progressivity of the personal income tax system include the changes in the deduction of medical expenses to tax credits, retirement reform from the 2017 tax year, the increase in the effective capital gains tax rates, changes to fringe benefits on vehicles, increases in marginal tax rates as well as the partial adjustment for fiscal drag in a number of years during that period.

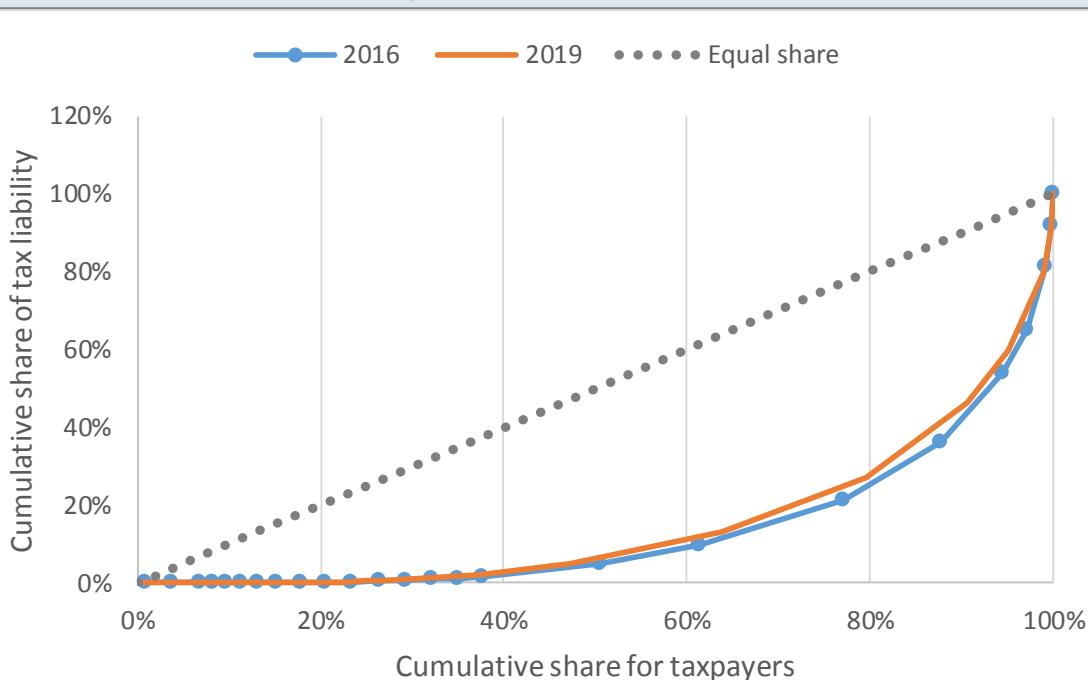

# PERSONAL INCOME TAX

Graph 1: Cumulative share of taxable income

The cumulative share of tax liability against the cumulative share for personal income taxpayers is more unequal than the cumulative share of taxable income and mirrors the progressive nature of the personal income tax whereby taxpayers at higher taxable income levels are taxed at higher tax rates.

Graph 2: Cumulative share of tax liability

# PERSONAL INCOME TAX

## Distribution of tax liability across taxable income and income groups

Table 2.6 presents the distribution of assessed individual taxpayers, taxable income and tax assessed across major taxable income groups. The table shows that for 2019, 79.5% of the assessed individual taxpayers had a taxable income below R500 000, i.e. most of the taxpayers fell below the return submission threshold. These taxpayers earned 46.4% of the total taxable income and contributed 27.3% of the tax assessed. A further 20.5% of the taxpayers earned higher than R500 000 in 2019 and were liable for 72.7% of the tax assessed.

Although taxpayers' contributions to the fiscus continue to reflect the income inequalities in the South African society, cohort structures based on tax administration data confirm that some upward social-economic mobility is taking place.

The number of taxpayers assessed in the brackets higher than R350 000 continues to grow. This is mainly due to above inflation adjustments to salaries as well as greater compliance. The R350 001 to R500 000 income tax bracket increased by 57 676 taxpayers (9.3%) between the 2016 and 2019 tax years while the upper bracket grew by 173 949 taxpayers (24.3%) during this period.

From the 2018 to the 2019 tax year, average taxable income for taxpayers within the income tax bracket of R70 001 to R350 000 increased by 1.9% while the group between R350 001 to R500 000 increased by 0.6%. Average taxable income for taxpayers in the group with taxable income higher than R500 000 contracted by 0.2%.

**Table 2.6: Distribution of assessed individual taxpayers over major taxable income groups, 2016 – 2019**

Percentage	Taxable income group	2016	2017	2018	2019

Figure 2.2 shows the percentage distribution of assessed individual taxpayers, their taxable income and the tax assessed according to taxable income group for 2019. Greater detail is provided in Table A2.1.1.

# PERSONAL INCOME TAX

Figure 2.2: Distribution of assessed individual taxpayers by taxable income group, 2019

Assessed losses for individuals do not only reflect the loss for that tax year, but also include accumulated assessed losses brought forward from previous tax years. If an individual had a taxable profit for the current year, it is possible that they could still have an assessed loss brought forward from previous years.

Table A2.1.2 shows “income” included in the final taxable income calculation as recorded on the assessment. Note that interest exemptions and Capital Gains Tax (CGT) exclusions have not been taken into account. The income shown in the table is, therefore, based on taxable income plus deductions. However, the income shown is still not an indication of the gross income of taxpayers as exempt amounts are not included.

Deductions granted as a percentage of income was 5.8% in 2016 and increased in 2017 to 13.5% and 13.6% in 2019 as a result of the introduction of legislative amendments to give effect to retirement reforms allowing higher tax deductions for retirement contributions.

Table 2.7 shows the distribution of income, and the granting of deductions, in income groups (rather than taxable income groups). The largest portion of the R368.6 billion allowed as deductions in 2019 was granted to taxpayers in the R500 000 + income bracket. Of their income, 12.5% was granted as a deduction.

## Tracking of taxable income and tax liability of a cohort across 10 consecutive years, 2009 - 2018

To track changes in the taxable income of taxpayers over a 10-year tax period, an analysis was conducted of the taxable income and assessed tax of all taxpayers who have been assessed every year since 2009. There were 5 076 863 taxpayers assessed in 2009. Of these, 2 938 292 taxpayers (57.9%) had been assessed for each of the subsequent nine years (2010 to 2018).

The retention rate across the 10-year period was 47.9% mainly due to the following reasons:

- The submission threshold introduced in 2008 was at R120 000, and remained at this level until the 2013 tax year when it was increased to R250 000. In the 2015 tax year it was increased again to R350 000. These submission thresholds allowed taxpayers to elect whether or not to submit a return for assessment if they met specific criteria.
- Some taxpayers assessed in 2009 may not have submitted returns for tax years 2010 and after for one or several reasons:
  - Death of taxpayer;
  - Emigration of taxpayer;
  - Leaving the formal active workforce due to retrenchment, resignation or retirement;
  - Insolvency of taxpayer; or
  - Failure to submit returns.

In 2009 of the 2 938 297 taxpayers, 1 212 164 taxpayers (41.3% of those assessed) had taxable income below R120 000. Of the below R120 000 taxpayers, the total number of assessed taxpayers in 2018 has decreased significantly to 447 185 (15.2% of those assessed), partly as a result of the increases in the submission thresholds.

# PERSONAL INCOME TAX

The number of taxpayers in the income group higher than R350 000 increased from 368 033 in 2009 to 1 293 705 in 2018.

Table 2.8 shows the increase in taxable income group and tax assessed, for the taxpayers assessed throughout the 10-year tax period. Further detailed data on the 10-year cohort can be found in Tables A2.8.1 to A2.9.1.

Over this period, the average taxable income of *all* assessed taxpayers increased by a CAGR of 7.8%. Changes to tax legislation contributed to the growth in assessed tax. These changes included the tax changes to medical expense and pension deductions, fringe benefits and travel expenses.

The average taxable income for the 2 938 297 taxpayers increased at a rate of 8.7% during the 10-year period. This indicates that these taxpayers recorded higher increases in taxable income than the average of *all* individuals assessed (the latter includes new entrants).

# PERSONAL INCOME TAX

Figure 2.3 shows how the 2.9 million taxpayers' taxable income shifted across the tax brackets due to increases in taxable income and other market factors.

**Figure 2.3: Proportion of the 2.9 million taxpayers by marginal tax rates, 2009 – 2018**

## Personal income tax concentration curves

Panel data, also known as longitudinal data or cross-sectional time series data in some special cases, is data that is derived from a (usually small) number of observations over time on a (usually large) number of cross-sectional units like individuals, households, firms, or governments.

Panel tax data whereby the distribution of these taxpayers and the annual changes in taxable income of those taxpayers are compared for the period 2009 to 2018 is depicted in the graph below. These taxpayers earned taxable income for each year under review and were assessed for the said period. The distribution of taxable income for these taxpayers has become more equal over this time period. The more equal distribution is attributed to the changes in tax policy measures and the average increases in remuneration for the respective income groups. Graph 3 below shows cumulative share of taxable income.

# PERSONAL INCOME TAX

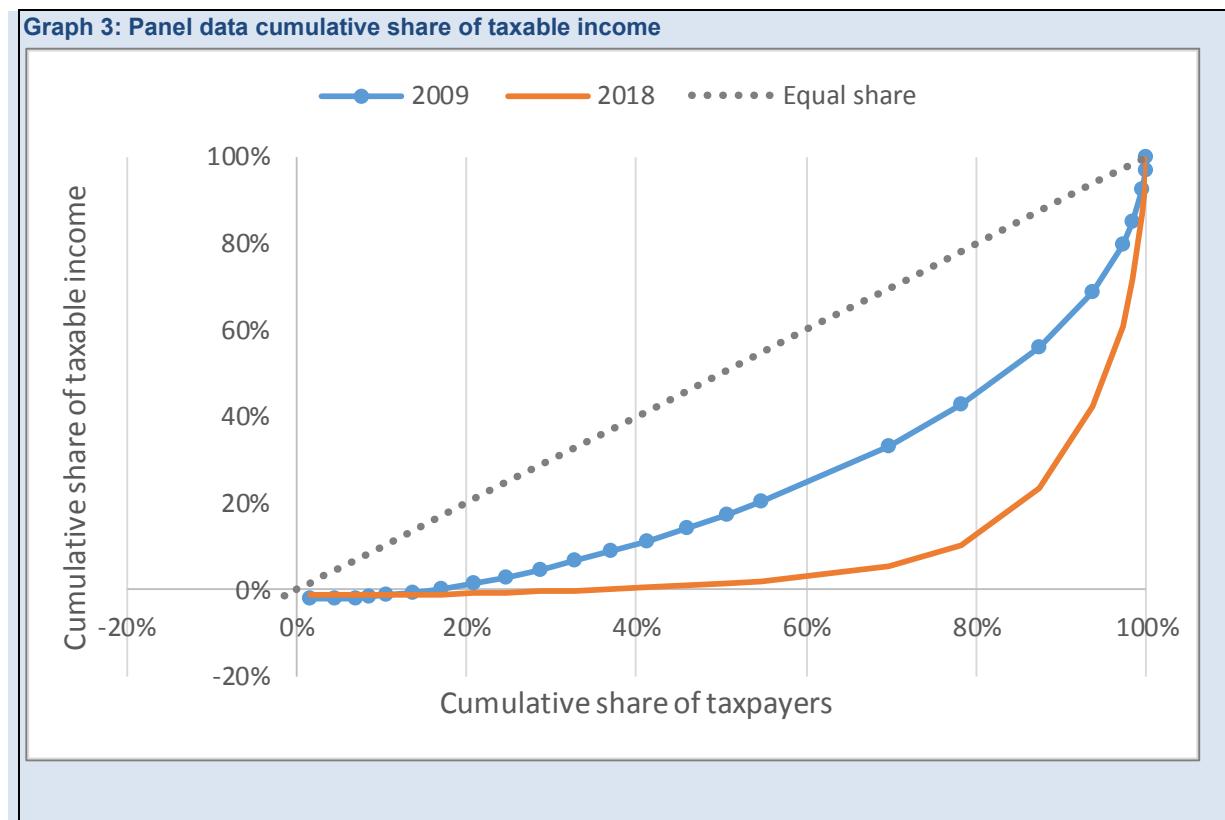

Table 2.9 shows assessed individual taxpayers, taxable income and effective tax rates, according to the age brackets for the 2009 tax assessments.

**Table 2.9: Assessed individual taxpayers: taxable income, tax assessed and effective tax rate by age group, 2009 and 2018**

Tax year	2009				2018				Increase

# PERSONAL INCOME TAX

The national average tax assessed per individual increased from R35 791 per individual in 2009 to R70 262 in 2018, an increase of 103.8% (CAGR of 8.2%). The 2.9 million taxpayers, however, increased their average tax assessed per taxpayer from R44 642 in 2009 to R106 386 in 2018, an increase of 138.3% (CAGR of 10.1%).

The average taxable income of assessed taxpayers younger than 56 years in 2018 (1.9 million), increased by a compound annual growth rate (CAGR) of 6.7%. It, however, increased by 16.2% for taxpayers 56 and older. Changes in growth in the different groups can be attributed to:

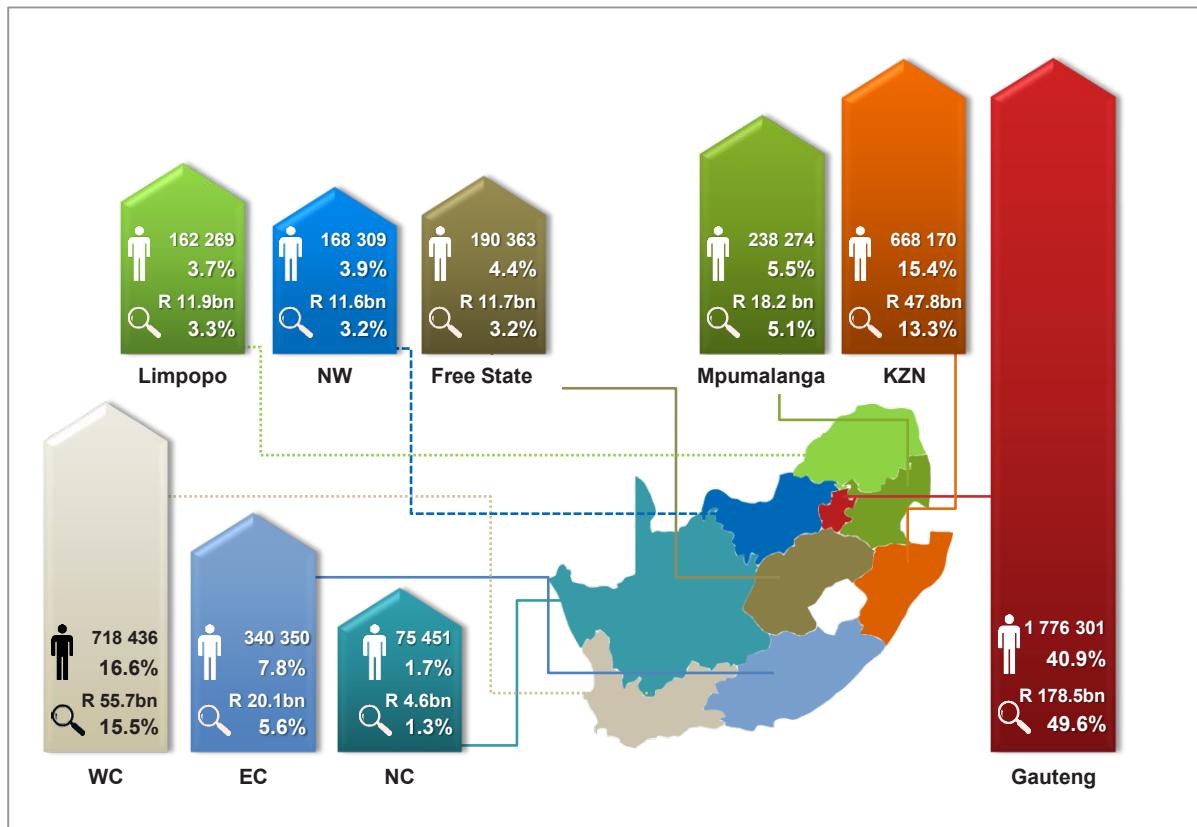

- Taxpayers retired or retrenched during this period can have elevated taxable income for a specific year as a result of lump sum payments. However, afterwards these taxpayers can experience a significant reduction in taxable income as salaries, their main source of income, were replaced with pension and investment income.
- Emigrating taxpayers declaring Capital Gains Tax resulting in high taxable income for a particular year.
- Taxpayers with business income can have a diverse taxable income resulting from economic conditions.
- Annual increases in pensions usually only compensate for inflation and are often lower than increases received by people earning salaries with no annual bonus payments;

## **Taxpayers who are 65 and older can deduct larger amounts for medical costs against taxable income.Distribution by province based on office of registration**

The distribution of taxpayers, taxable income and tax assessed by province in 2019, determined according to the location of the SARS office at which the taxpayer is registered, reveals almost unchanged proportions between provinces compared to the previous year (*Figure 2.4* and *Table A2.1.3*).

# PERSONAL INCOME TAX

Figure 2.4: Assessed individual taxpayers and tax assessed by province (based on office of registration), 2019

## Distribution by province based on taxpayer residential information as submitted on income tax returns

The distribution of taxpayers, taxable income and tax assessed by province and municipality, is determined using the residential address declared by taxpayers on their returns. The “unknown” province contained in the table indicates taxpayers who provided insufficient information to determine the province in which they reside. A study of taxpayers according to their place of residence provides a more accurate indication of the geographic distribution of taxpayers, as well as their taxable income and assessed tax, than an analysis that uses their office of registration. It also enables the distribution of taxpayers to be examined according to the municipality in which they reside.

# PERSONAL INCOME TAX

1. Based on the province where the taxpayer resides.

2. The "unknown" province indicates taxpayers who provided insufficient information to determine the province in which they reside.

Table 2.10 and Figure 2.5 shows that most assessed taxpayers are based in Gauteng and they have the highest average taxable income at R435 239 followed by Western Cape at R363 758, Limpopo at R346 517, Mpumalanga at R342 393, KwaZulu-Natal at R329 141 and Northern Cape at R320 289. The Eastern Cape and Free State Province have the next lowest average taxable income at R307 202 and R291 409 respectively. The North West has the lowest average taxable income at R291 239.

# PERSONAL INCOME TAX

Figure 2.5: Average taxable income per assessed taxpayer by province (based on residential address), 2019

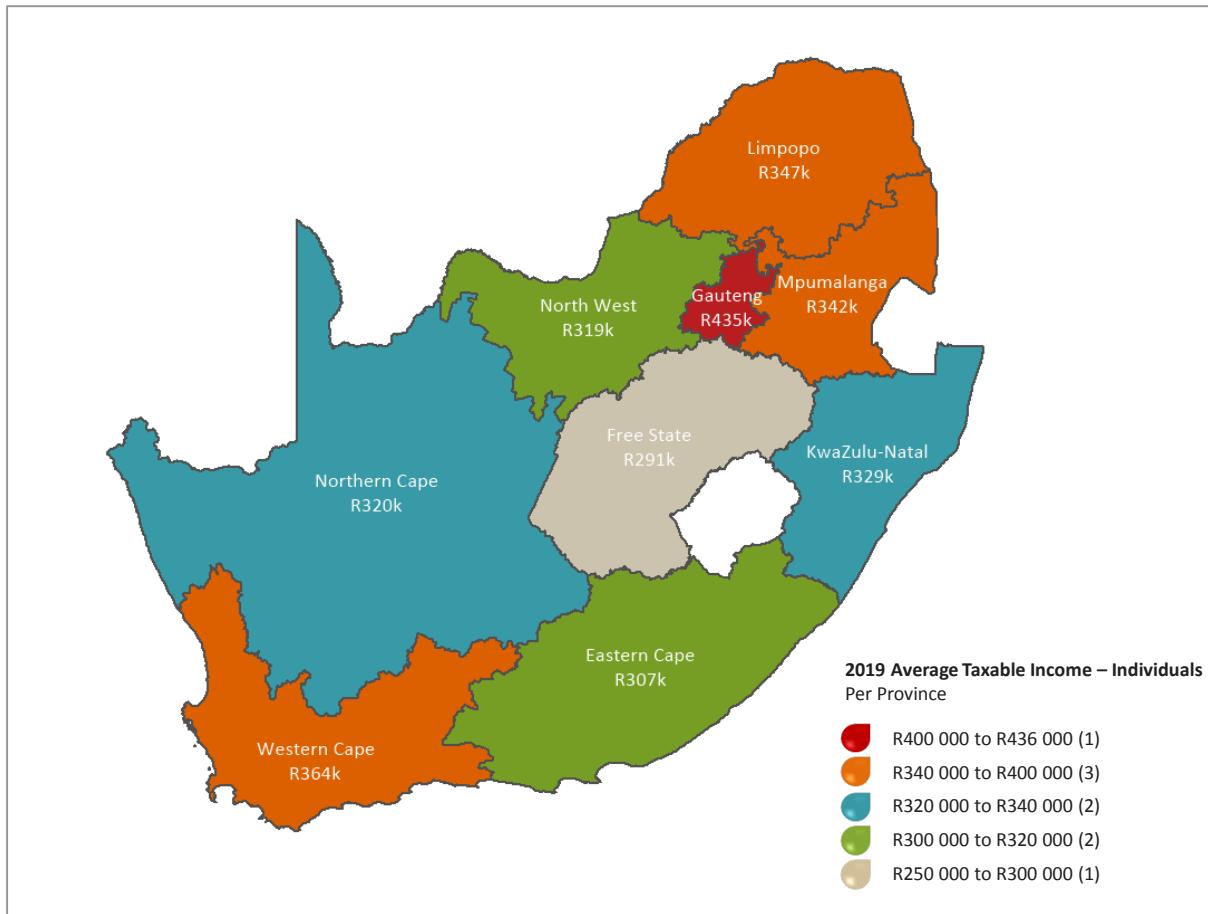

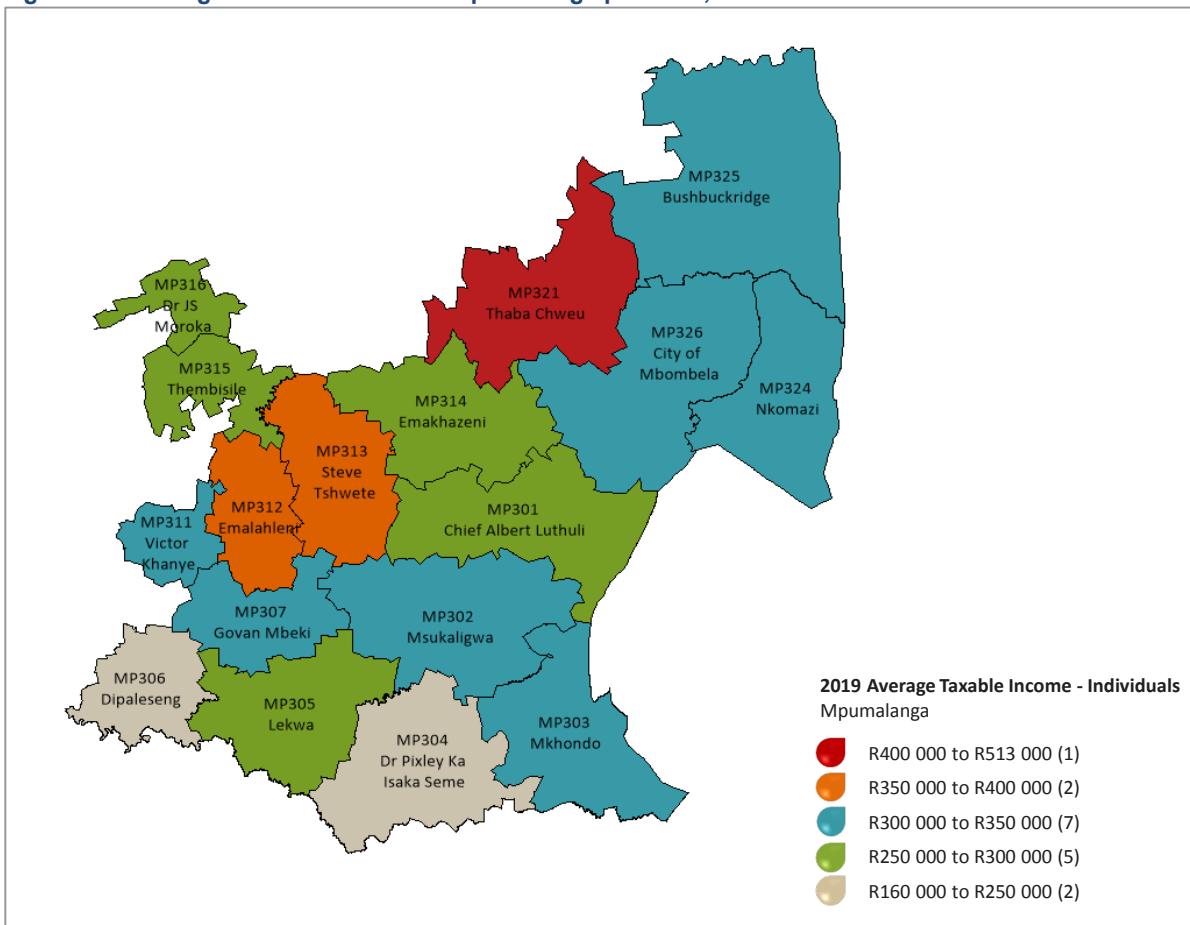

Figure 2.6 and Table 2.11 show the distribution of average taxable income by municipality for the Mpumalanga province. Tables and maps for all provinces can be found in *Tables A2.10.1 to A2.10.9*. Statistics on assessed tax are available for 213 local and metropolitan municipalities, using demarcation borders as available in June 2017.

## Distribution by age group

Figure 2.7 and Table A2.1.4 show a breakdown of assessed individual taxpayers by age group. The proportion of taxpayers in the five age groups older than 45 grew in 2019, while the representation of taxpayers in other age groups declined. This is likely due to the increase in the submission threshold. This would have resulted in fewer younger taxpayers, who usually earn less than older taxpayers, submitting returns. 27.0% of assessed taxpayers are in the 35-44 age group. This group earns nearly a third of the total taxable income and contributes nearly a third of the total tax assessed.

# PERSONAL INCOME TAX

Figure 2.7: Percentage of assessed individual taxpayers by age group, 2016 – 2019

## Distribution by gender

The percentage of female taxpayers has been steadily increasing. For 2019, as shown in *Figure 2.8* and *Table A2.1.5*, females accounted for 45.8% of assessed individual taxpayers, earned 39.5% of the taxable income and contributed 34.07% of the tax assessed.

Females had taxable income of R631 176 in 2019 and were liable for tax of R122 292 at an effective rate of 19.4%. This contrasts with males who had taxable income of R967 635 and were liable for tax of R237 732 at an effective rate of 24.6%. Females earned 21.0% less than males, as measured by taxable income, and were liable for 32.1% less tax than males. A percentage of 1.0% of total taxpayers couldn't be identified and are included under the male gender numbers.

# PERSONAL INCOME TAX

**Figure 2.8: Male and female assessed individual taxpayers by main taxable income group, 2019**

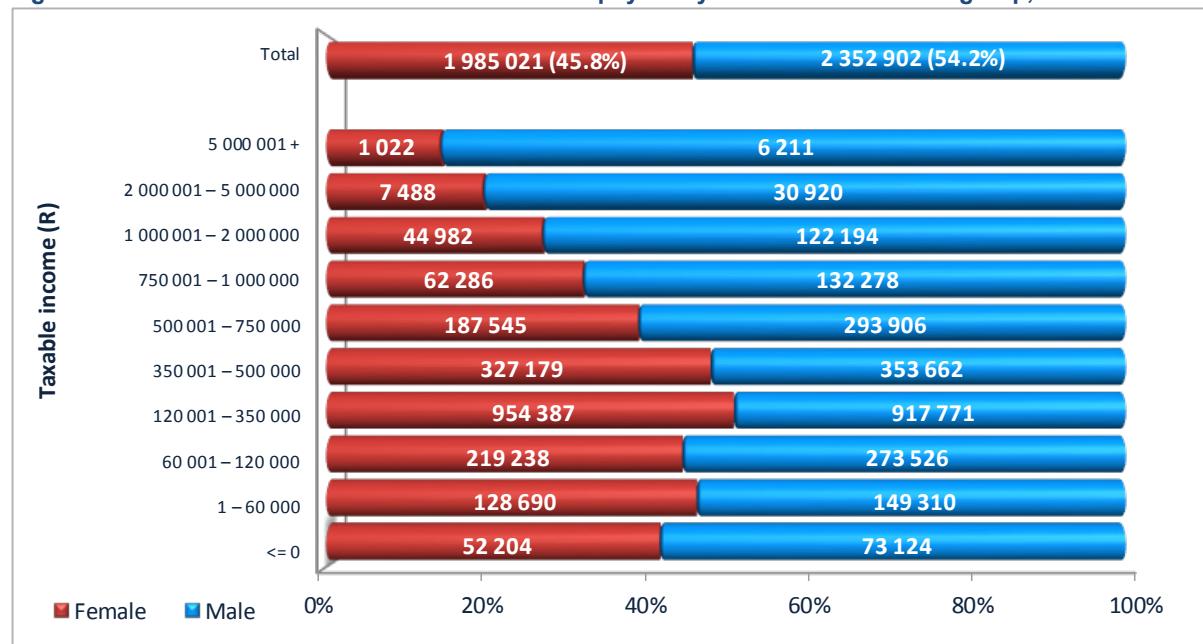

Table A2.1.6 shows that the number of individuals with taxable income between zero and R500 000 males in average were 8.5% higher than females. However, as taxable income increased the proportion of females declined significantly. Only 32.0% of taxpayers with taxable income between R750 000 and R1 million in 2019 were females. This proportion declines further to only 14.1% of those with taxable income of more than R5 million. The proportion of females as a percentage of the total number of taxpayers assessed increased from 43.8% in 2016 to 45.8% in 2019. This was mainly due to more females than males becoming liable for submitting tax returns.

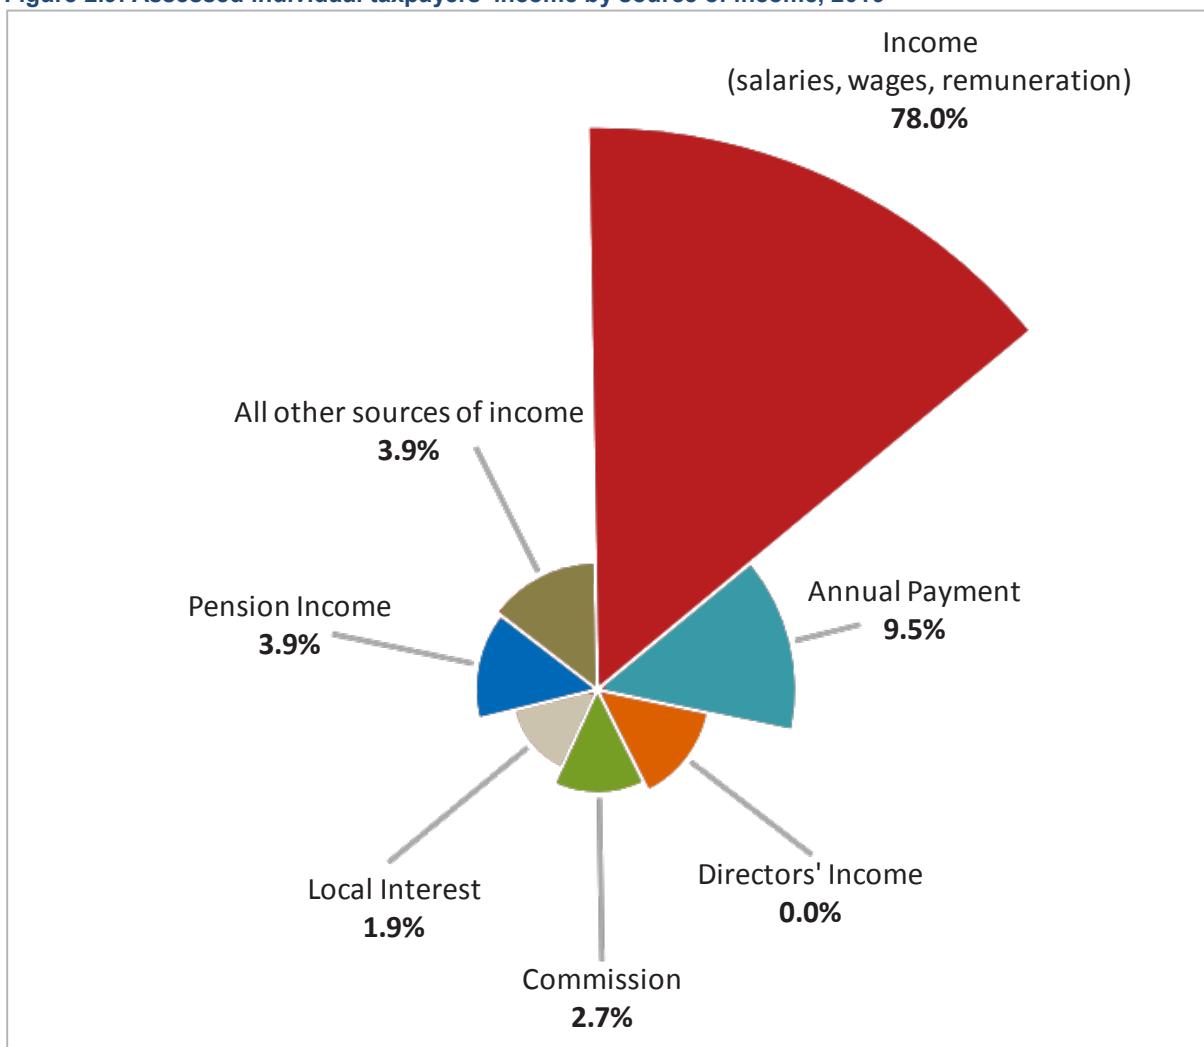

## Distribution by source of income

Figure 2.9 and Table A2.2.1 show taxpayers' sources of income. Nearly 4.3 million individual taxpayers received income in 2019 from remuneration, pensions or annuities. More than 2.8 million of these taxpayers also received annual payments in the form of bonuses or leave pay.

In 2019 almost 339 000 individual taxpayers earned local interest income that exceeded the exemption limit applicable for interest. Interest from a South African source earned by any natural person under 65 years of age, up to R23 800 per annum, and persons 65 years and older, up to R34 500 per annum, is exempt from taxation. The taxable portion of local interest increased from R18.9 billion in 2016 to R28.9 billion in 2019. The number of taxpayers with taxable foreign interest increased from 216 706 in 2016 to 236 386 in 2019.

# PERSONAL INCOME TAX

Figure 2.9: Assessed individual taxpayers' income by source of income, 2019

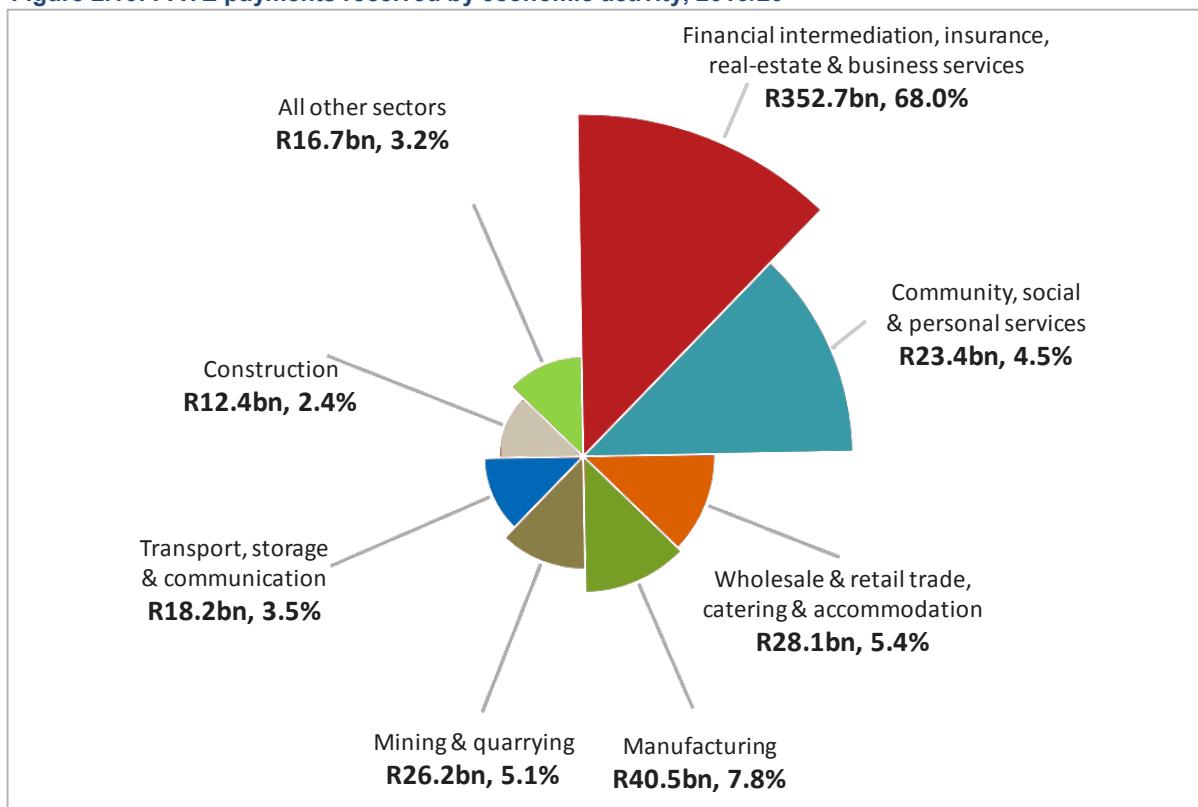

## Distribution by economic activity

Figure 2.10 and Table A2.3.1 show PAYE payments received, identified according to the Standard Industrial Classification (SIC), rather than SARS sector codes. It should be noted that the source of income codes used by SARS are not aligned with the SIC system used by Statistics South Africa.

The *Financial intermediation, insurance, real-estate & business services* sector employed the largest number of assessed individual taxpayers in 2019/20 (68.0%) followed by the *Manufacturing* (7.8%), *Wholesale and retail trade, catering and accommodation* (5.4%) and *Mining* (5.1%) sector. Employers in the *Financial intermediation, insurance, real- estate & business services* sector contributed almost half of the PAYE.

# PERSONAL INCOME TAX

Figure 2.10: PAYE payments received by economic activity, 2019/20

## EMPLOYMENT TAX INCENTIVE (ETI)

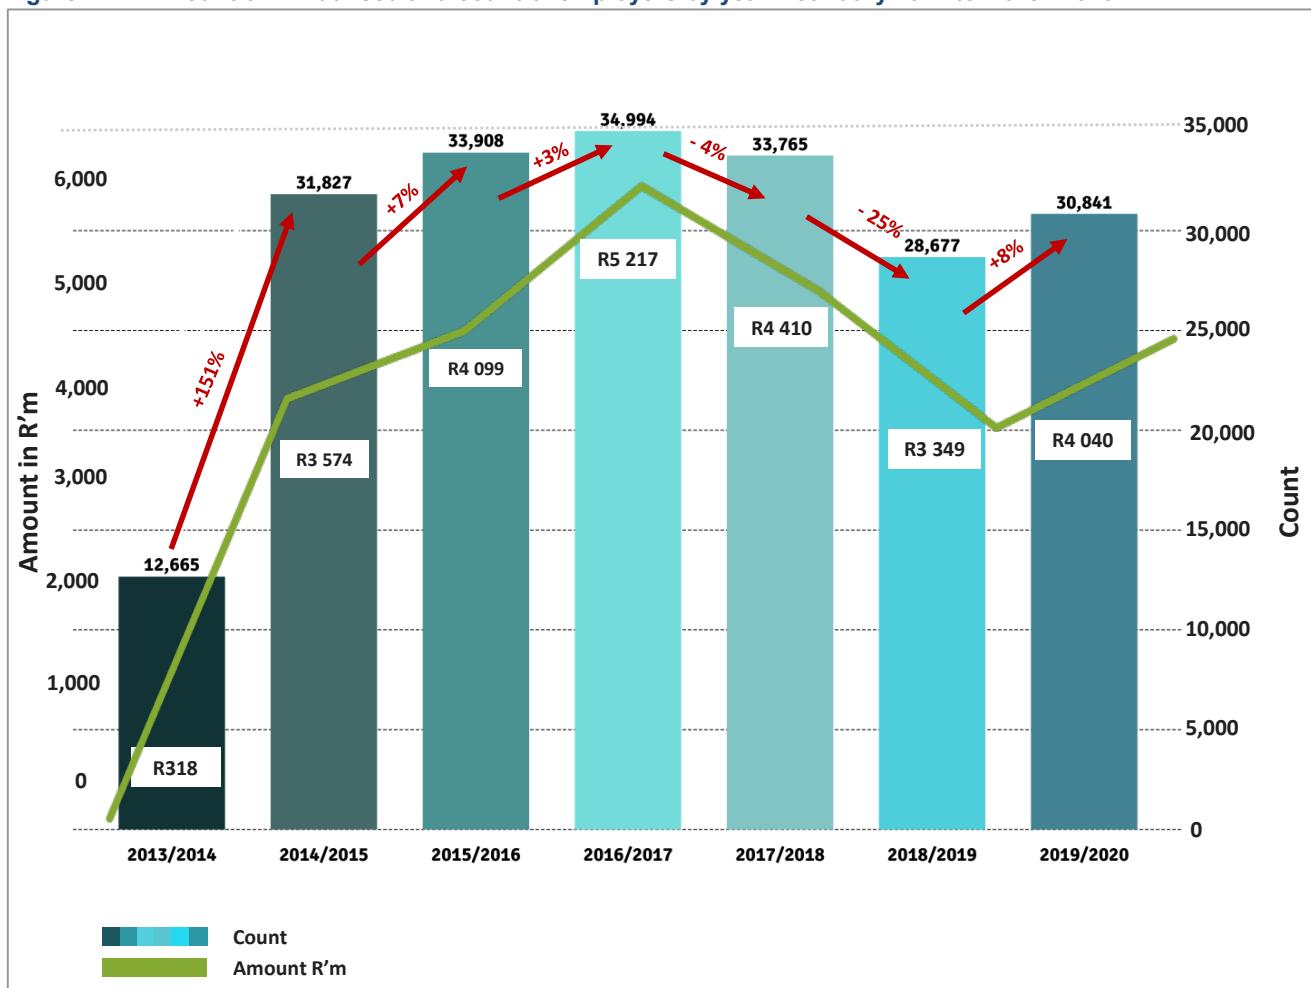

Government introduced the employment tax incentive on 1 January 2014 to contribute to reducing youth unemployment. It reduces an employer's cost of hiring young people through a cost-sharing mechanism with government, while leaving the salary the employee receives unaffected. The employer can claim the ETI and reduce the amount of Pay-As-You-Earn (PAYE) tax payable by the amount of the total ETI calculated in respect of all qualifying employees.

Total claims for the Employment Tax Incentive amounted to R25.0 billion for the period 1 January 2014 to 31 March 2020.

The number of ETI claims utilized increased by 151.3% from 12 665 in the 2013/2014 tax year to 31 827 in the 2014/2015 tax year, showing the uptake since introduction of this incentive. It increased by 6.5% in the following tax year but contracted by 3.5% two years later in the 2017/2018 tax year. Employers are able to claim the incentive for a 24 qualifying month period for all employees who qualify, which explains the contraction. The number contracted again by 15.1% but increased again by 7.5% in the 2019/2020 tax year. During February 2019 the Finance Minister announced that this incentive will be extended to February 2029. From 1 March 2019, employers will be able to claim the maximum value of R1 000 per month for employees earning up to R4 500 monthly, up from R4 000 previously.

# PERSONAL INCOME TAX

Figure 2.11: Amount of ETI utilised and count of employers by year – January 2014 to March 2020

Employers in sectors represented by the Wholesale & Retail SETA claimed the highest amount of ETI followed by the Services SETA.

The data in these summaries are based on monthly employer declarations received (EMP201).

## ASSESSED INDIVIDUAL TAXPAYERS WITH BUSINESS INCOME

Table A2.4.1 shows a breakdown of the economic sectors in which assessed individual taxpayers with business income participated in. Assessed individual taxpayers with business income comprised 4.6% of the total number of assessed individual taxpayers in 2019 compared to an average of 4.5% for the previous three years. It is expected that the number of cases for the 2019 tax year is to increase once assessments are finalised; not all cases have been finalised on the date when data was extracted for this publication.

The *Financing, insurance, real-estate & business services* sector contributed 44.5% of the total taxable income of assessed individual taxpayers with business income. This sector contributed 44.6% of the total number of assessed individual taxpayers with business income, followed by *Medical, dental and other health and veterinary services* (10.6%), *Public administration* (5.2%) and *Agencies and services* (4.8%) sectors.

## ASSESSED INDIVIDUAL TAXPAYERS' ALLOWANCES, FRINGE BENEFITS AND DEDUCTIONS

### **Retirement funding reforms became effective on 1 March 2016**

From 1 March 2016 deductions for contributions to retirement funds includes contributions to pension, provident fund and retirement annuity. Two important changes took place:

- Provident fund contributions are allowed as a deduction; and
- the employer's contribution is a taxable fringe benefit in the hands of the employee.

The formula to determine deductible retirement fund contributions is set out in section 11F (replacement of section 11(k)) of the Income Tax Act. The deduction is the lesser of:

- R350 000; or
- 27.5% of the greater of
  - remuneration; or
  - taxable income (including passive income and taxable capital gains),  
but excluding retirement lump sum benefits, withdrawal lump sum benefits and severance benefits in respect of both remuneration and taxable income.

Previously, different contribution caps and deduction bases applied to the three types of retirement funds.

### **How did section 11F (previously section 11(k)) of the Income Tax Act legislative changes affect the PIT taxable income base?**

The introduction of the annual 27.5% cap on deductible contributions will allow many taxpayers to get a deduction for a bigger portion of contributions that were also previously limited. Taxpayers contributing to pension funds and provident funds may be affected by the newly introduced annual contribution cap of R350 000 that did not apply previously. Taxpayers who contribute more than R350 000 (by way of their own and their employers' contributions) per annum, from 1 March 2016 pay tax on the contributions above the cap and accordingly see a reduction in their take-home pay.

Pension fund members are least affected by the changes as the previous pension fund model is effectively becoming the "standard" retirement fund model. Employers could previously contribute up to 20% to a pension fund on behalf of an employee while the employee could contribute a maximum of 7.5%.

Provident fund members benefit from a tax deduction on contributions made to their provident fund and see an increase in their take-home pay as they now receive a tax deduction for their contributions.

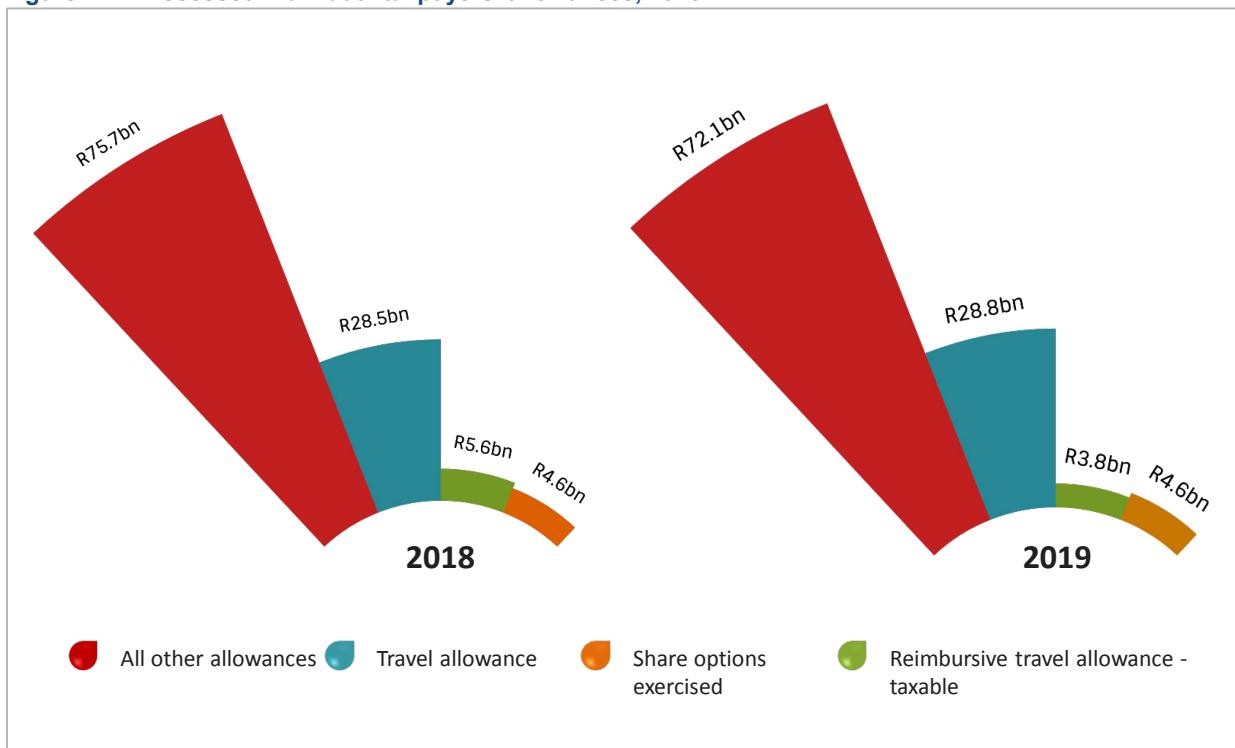

Retirement annuity fund investors are positively impacted by the changes. They now receive the same tax deductions after applying the same prescribed limitations as members of pension funds.

# PERSONAL INCOME TAX

## Assessed individual taxpayers' allowances

Travel allowances continue to be the largest allowance for individuals. This allowance has steadily increased in relative terms from 24.9% in 2016 to 26.3% in 2019 (*Figure 2.12*).

**Figure 2.12: Assessed individual taxpayers' allowances, 2019**

*Table A2.5.1* shows the consolidation for 2016 to 2018 tax years to enable a comparison. The most significant allowances are shown according to taxable income group in *Tables A2.5.2* to *A2.5.4*.

## Assessed individual taxpayers' fringe benefits

*Table A2.6.1* provides a summary of assessed individual taxpayers' fringe benefits. These benefits increased from R72.0 billion in 2016 to R187.3 billion in 2017 and to R192.4 billion in 2018. The high growths in the 2017 and 2018 tax years are in respect of pension, provident and retirement annuity fund contributions by employers resulting from retirement legislative reform effective from 1 March 2016 as per section 11F (previously section 11(k)) of the Income Tax Act. The amount of R170.6 billion for the 2019 tax year will increase as more assessments are finalised.

The pension, provident fund and retirement annuity contributions of R102.0 billion were the largest benefit in the 2019 tax year followed by medical scheme contributions paid on behalf of employees. In 2016 medical scheme contributions amounted to R53.1 billion and by 2018 it had increased to R58.0 billion but declined slightly to R51.5 billion in 2019. The most significant fringe benefits are shown by taxable income group in *Tables A2.6.2* to *A2.6.5*.

# PERSONAL INCOME TAX

## Assessed individual taxpayers' deductions

*Table A2.7.1* provides a summary of deductions allowed to individual taxpayers on assessment. The deductions for retirement fund contributions as a proportion of total deductions, increased from 64.5% in 2016 to 83.4% in 2019 (*Figure 2.13*); in monetary value an increase from R61.8 billion in 2016 to R181.3 billion in 2019. From the 2017 tax year retirement contributions are grouped under code 4029 and not separately under 4001, 4002, 4006 and 4007 as in previous years.

Since the 2017 tax year retirement contribution deductions are grouped under one code (4029), separate information for pension, provident and retirement annuity fund deductions are not available. The fringe benefit data however, shows the benefit separately. For the 2019 tax year 69.9% of the total retirement benefit is for pension fund contributions, 29.3% for provident fund contributions and 0.7% for retirement annuity fund contributions. Retirement annuity fund contributions are usually paid by the taxpayer and not by the employer and are therefore not reflected as a fringe benefit.

From the 2015 tax year no deductions for medical expenses appear on assessments as the additional medical expenses tax credit is treated as a rebate against tax payable and not a deduction in determining taxable income.

Tables on medical scheme fees tax credits and additional medical expenses credits allowed have been added for more complete information.

The amount allowed for medical scheme fees tax credits increased from R19.5 billion at the end of the 2016 tax year to R21.5 billion at the end of 2018. The low amount of R18.3 billion can be ascribed to lower submission levels as a result of the change in the submission threshold, but may increase as outstanding returns are finalised.

Additional medical expense tax credits allowed amounted to R6.3 billion at the end of the 2019 tax year which is higher than the amount of R4.5 billion allowed in 2016.

The most significant deductions are shown, by taxable income group, in *Tables A2.7.2 to A2.7.10*.

# PERSONAL INCOME TAX

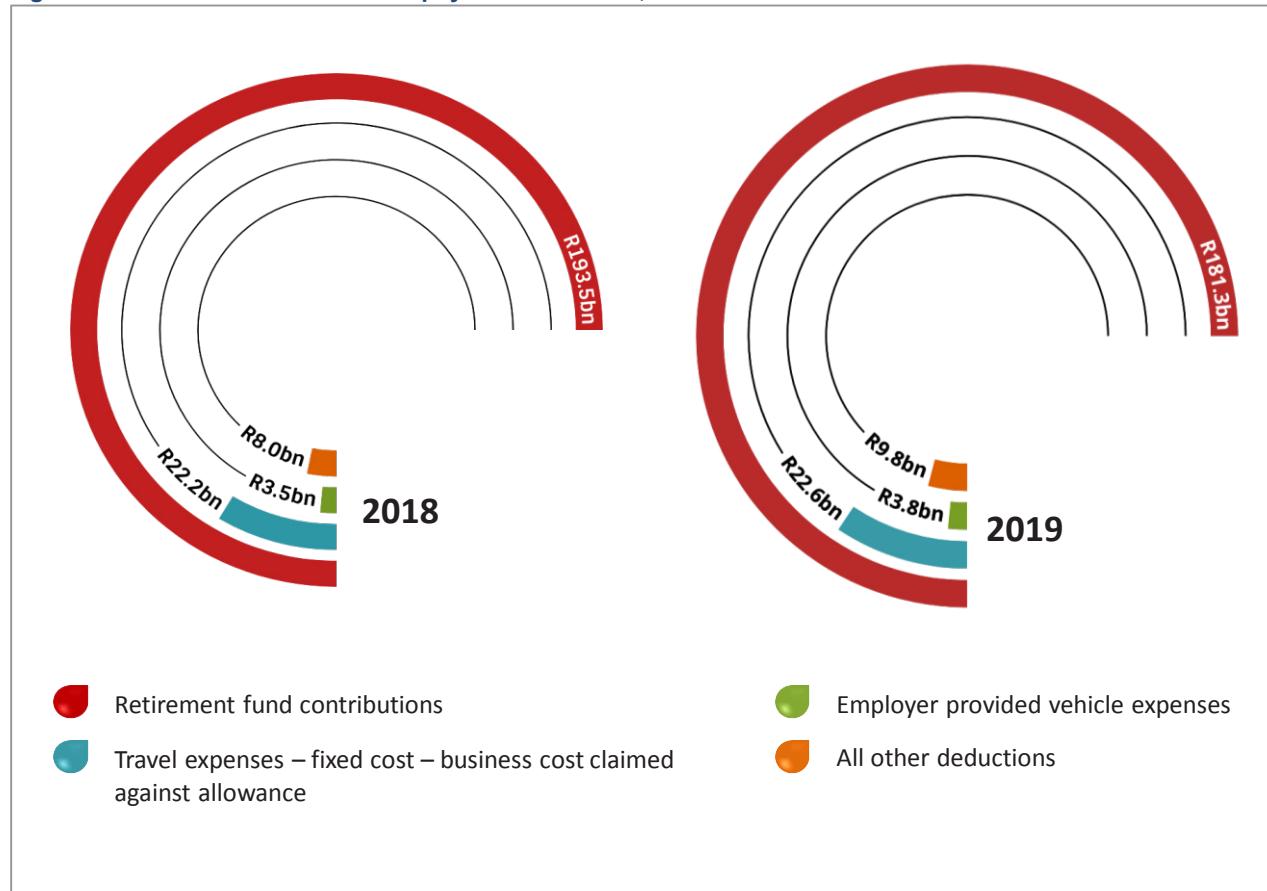

## Contributions that do not qualify for a medical scheme fees tax credit

Certain medical-related arrangements are entered into between taxpayers and entities that are not regulated by the Medical Schemes Act No 131 of 1998. Products offered by long-term or short-term insurers, which can include, for example, gap cover or hospital insurance, do not qualify for a medical tax credit because they are not paid to a registered medical scheme. Certain bargaining councils establish and operate medical aid funds. If these funds are not registered under the Medical Scheme Act, the contributions do not qualify for a medical tax credit.

In order for the expenses to qualify for the medical tax credit, the expenses must not have been recoverable by the taxpayer from any person, for example, from the taxpayer's medical scheme or an insurer under a medical gap cover insurance plan.

Contributions paid by the taxpayer to any other fund registered under provisions similar to the provisions of the Medical Scheme Act in the laws of any other country, may also be taken into account in the calculation of the medical tax credit. If a foreign fund is not regulated under legislation that is similar to the Medical Scheme Act, it will not qualify for a medical tax credit.

Figure 2.13: Assessed individual taxpayers' deductions, 2019

# PERSONAL INCOME TAX

Tables A2.7.11 to A2.7.17 show the significant deductions allowed by value of the deduction. For the 2019 year:

- 7.3% of assessed taxpayers had retirement fund contributions of between R50 000 and R60 000 compared to pension fund and current retirement annuity fund contributions in the 2016 year which were respectively between R5 000 and R10 000 (21.0%) and between R10 000 and R15 000 (22.3%);
- 8.3% had travel expenses of between R50 000 and R60 000;
- 10.5% had business expenses for employer provided vehicles of between R60 000 and R70 000;
- 47.6% of medical scheme fees tax credits are between R5 000 and R10 000; and
- 60.9% of additional medical expense credits are between R0 and R5 000.

1. Includes provident fund contributions as well as tool, entertainment and foreign subsistence allowances and other deductions.

2. From the 2015 tax year no medical expenses deductions will appear on assessments as the additional medical expenses tax credit is treated as a rebate against taxes and not a deduction.

Medical tax credit (rebates and additional expenses allowed) has been added for comparative purposes. From 1 March 2014 tax credits applied to all taxpayers. Rebate amount allowed for 2014 tax year already included in medical deduction and is not included in total amount allowed.

3. Deductions for Income Insurance Protection Contributions can no longer be claimed from the 2016 year of assessment.

Retirement reform was announced from 1 March 2016 in section 11F (replacement of section 11(k)) of the Income Tax Act. From the 2017 tax year retirement contributions are grouped under code 4029 and not separately under 4001, 4002, 4006 and 4007.

1. From the 2015 tax year no medical expenses deductions will appear on assessments as the additional medical expenses tax credit is treated as a rebate against taxes and not a deduction.  
Medical tax credit (rebates and additional expenses allowed) has been added for comparative purposes. High deductions values could be wrong and are being investigated.

1. From the 2015 tax year no medical expenses deductions will appear on assessments as the additional medical expenses tax credit is treated as a rebate against taxes and not a deduction.  
Medical tax credit (rebates and additional expenses allowed) has been added for comparative purposes. High deductions values could be wrong and are being investigated.

## 3 COMPANY INCOME TAX

### KEY FACTS

Analysis of Company Income Tax (CIT) returns assessed for the 2018 tax year and CIT collections in the 2019/20 fiscal year show:

- At 15.9%, CIT has remained the third largest contributor to total tax revenue collected in 2019/20; this is slightly below the 16.6% achieved in the 2018/19 financial year. Furthermore, it is well below the peak of 26.7% achieved prior to the 2008/09 global financial crisis. The 2008/09 performance was mainly due to elevated global demand for commodities in the prior years coupled with high commodity prices in 2008/09;
- However, the impact of the recession on CIT collections was felt in 2009/10 as the effects of lower corporate profits filtered through and the tax product has seemingly struggled to attain historic contribution levels for the past years;
- There were over 2.0 million companies registered for CIT as at 31 March 2019. Of these, 939 781 companies were expected to submit income tax returns for the tax year 2018, but only 83.0% of these companies were assessed in 2018;
- Out of the 780 480 companies assessed as at 31 July 2020 for tax year 2018, 25.2% had positive taxable income, whilst 46.6% had taxable income equal to zero and the remaining 28.2% reported an assessed loss;
- The concentrated nature of the South African economy is evident as only 399 large companies (0.2% of the companies with positive taxable income) had taxable income of more than R200 million and were liable for 57.3% of the CIT in respect of the 780 480 companies assessed;
- The *Financial intermediation, insurance, real-estate and business services* sector accounted for 200 343 (25.7%) of the assessed companies and was liable for 41.6% of the CIT assessed, thus it continues to contribute the most amongst all the sectors;
- As at 31 July 2020, of the 780 480 companies assessed in respect of the 2018 tax year, 170 207 were assessed as Small Business Corporations (SBCs), taxed at the applicable graduated income tax rates, and the remainder taxed at either the fixed company tax rate of 28% or the graduated income tax rates for micro business that elect to pay only turnover tax;
- With the introduction of the rule that provisional tax payments of at least 80% of a company's tax liability for the applicable year of assessment are payable by the end of that year, CIT collections continue to improve, with the third provisional tax payments decreasing from 12.9% of total provisional tax collections in 2009/10 to 2.3% in 2018/19 and subsequently to 2.4% in 2019/20; and
- During 2018/19, 51.6% of the tax paid related to the 2018 tax year and 47.4% related to the 2019 tax year.

## INTRODUCTION

A company that is incorporated in or effectively managed from South Africa is a South African resident for income tax purposes, thus it is liable to pay tax. Company Income Tax (CIT) is defined as a tax levied on the taxable income (gross income less exemptions and allowable deductions) of companies as well as close corporations. It is currently levied at a rate of 28% with the exception of Small Business Corporations (SBCs), which have a special tax dispensation in the form of graduated income tax rates as well as micro businesses that meet certain criteria and have an annual qualifying turnover of R1 million or less.

After PIT and VAT, CIT continues to be the third largest contributor to total tax revenue since 2009/10. CIT briefly surpassed VAT in 2008/09 after recording a year-on-year growth rate of 18.1%, the highest growth achieved in the past decade, on the back of the commodity price boom experienced in 2008. However, this trend sharply reversed in 2009/10, when collections dipped by 18.1% as the effects of the global financial crisis took its toll on many companies' profitability. Although CIT has maintained its status as the third largest contributor, its relative contribution to total tax revenue collection has declined from the pre-recession peak of 26.7% in 2008/09 to 16.6% in 2018/19 then further to 15.9% in 2019/20. Companies struggled to return to profitability, with many carrying large assessed losses.

Post the financial crisis, the relative contribution ratio of CIT to total tax revenue has continued on a negative trajectory, this trend is likely to repeat as a result of the lockdown to curb the spread of the corona virus. This is further highlighted by the reduction in the CIT-to-GDP ratio, which decreased from 6.9% to 4.2% during 2008/09 until 2018/19. The decline can largely be attributed to sluggish global and domestic economic growth, structural challenges in some sectors of the economy as well as low business and consumer confidence levels. All of these factors have played a crucial role in subdued investment activity, resulting in lower profitability for companies.

The CIT from the *Mining and quarrying* sector was further severely impacted by the economic developments such as stagnant commodity prices, lower demand for commodities as well as low production in the face of continued unreliable electricity supply. Other sectors that were adversely impacted were the *Manufacturing* sector, largely due to oil price fluctuations, demand constraints as well as power supply constraints and the *Construction* sector, which has been impacted by the governments (the biggest spender) budget cuts to limit spending thus imposing cuts in infrastructure spending.

Although the current headline CIT tax rate is 28%, some sectors of the economy have different effective tax rates due to sector-specific tax dispensations and allowable deductions. These include:

- The gold mining formula;
- Long-term insurers;
- Farming deductions and valuations, and
- Accelerated depreciation of capital assets for qualifying expenditure, e.g.
  - Section 12B of the Income Tax Act of 1962, relating to the manufacture of renewable energy infrastructure;
  - Section 13quin of the Income Tax Act of 1962, concerning qualifying buildings and improvements in urban development zones;

- Section 11D of the Income Tax Act No. 58 of 1962, with respect to Research and Development (R&D) expenditure incurred;

SBCs with a gross income of not more than R20 million for a particular year of assessment qualify for a special tax dispensation in the form of graduated income tax rates instead of the fixed rate.

Micro businesses may elect to pay only turnover tax provided they have an annual qualifying turnover of R1 million or less in a year of assessment and meet certain criteria. Turnover Tax is a separate tax regime for micro businesses, that was designed to lower their administrative burden and has lower tax rates. The turnover tax system replaces Income Tax, Provisional Tax, Capital Gains Tax as well as Dividends Tax for micro businesses. Turnover tax for the 2015 tax year had a graduated tax rate structure with a maximum marginal rate of 6%. This marginal rate was reduced to 3% with effect from 1 March 2015.

Capital Gains Tax (CGT) is not raised separately from CIT. A capital gain arises when a company disposes of an asset for proceeds that exceed its base cost. The taxable portion of capital gains is included in CIT taxable income at an inclusion rate of 80% for the years of assessment commencing on or after 1 March 2016. For the years of assessment commencing on or after 1 March 2012 the inclusion rate was 66.6% and, prior to that, it was 50%. More information pertaining to the CGT levied on companies can be found in Chapter 6 of this publication.

On 1 April 2012, Dividends Tax (DT) replaced STC. DT is levied on certain categories of shareholders (beneficial owners of dividends) when they receive dividend distributions from companies. DT was introduced at a rate of 15% and was subsequently increased to 20%, effective from 22 February 2017.

This chapter gives an overview of:

- Provisional tax payments;
- Number of companies on the tax register;
- Taxable income and tax assessed;
- Companies with assessed losses or profits; and
- Small Business Corporations (SBCs).

## PROVISIONAL TAX PAYMENTS

All companies are classified as provisional taxpayers and must comply with the requirements of the provisional tax payment system. This system requires taxpayers to provide for their final tax liability by paying two provisional tax payments accounting in total to at least 80% of the final tax liability, during the applicable year of assessment (or the lesser of 90% of actual taxable income and the basic amount if taxable income does not exceed R1 million). A third voluntary “top-up” payment may be made after the end of the tax year. Failure to adhere to this payment system attracts penalties and interest.

The first provisional tax payment is required within six months of the commencement of the year of assessment. The second provisional tax payment must be made no later than the last business day of the year of assessment. The introduction of the 80% rule for all years of assessment beginning on or after 1 March 2009 requires companies with taxable income of more than R1 million to settle at least 80% of their tax liability for the year by the time they make their second provisional tax payment.

# COMPANY INCOME TAX

Companies that fail to comply with this requirement can incur a penalty of 20% on the underpayment of provisional tax. The third payment is a voluntary "top up" payment in order to avoid the payment of interest. It may be made within six months from the end of the year of assessment or within seven months from the end of the year of assessment, if the year of assessment ends in February.

If SARS is of the opinion that the taxable income estimate for a company's first or second provisional tax return has been understated, the company may be required, in terms of paragraph 19(3) of the Fourth Schedule to the Income Tax Act, to pay provisional tax on an increased taxable income estimate. The additional payment resulting from the paragraph 19(3) provision is captured as either a first or second provisional tax payment even though it was paid after the due date.

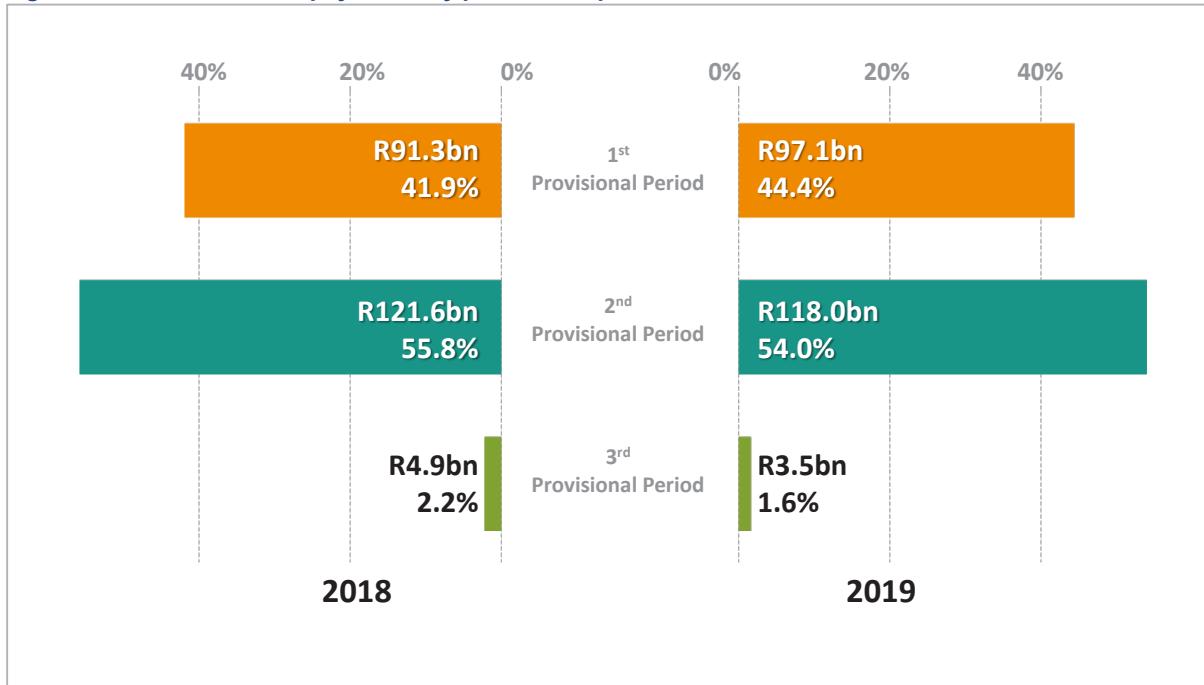

As a result of a more rigorous application by SARS of paragraph 19(3) of the Fourth Schedule to the Income Tax Act, as well as improved compliance with the provisional tax rule (80% rule for second provisional tax payments), the value of third provisional tax payments have declined significantly. Third provisional tax payments have remained on average below R6.0 billion (2.9% - 2.2%) between 2016 to 2018 and reduced even further to R3.5 billion (1.6%) for 2019. This is well below the maximum of 20% allowed for third provisional tax payments and payments on assessment (*Table 3.1* and *Figure 3.1*).

**Table 3.1: Provisional tax payments by provisional period by tax year, 2016 - 2019**

Period R million Tax year	1st Provisional period	Percentage change	2nd Provisional period	Percentage change	3rd Provisional period	Percentage change	Total
2016	82 174	7.3%	113 499	11.0%	5 858	-9.1%	201 531
2017	85 858	4.5%	119 245	5.1%	6 022	2.8%	211 126

# COMPANY INCOME TAX

Figure 3.1: Provisional tax payments by provisional period 2018 and 2019

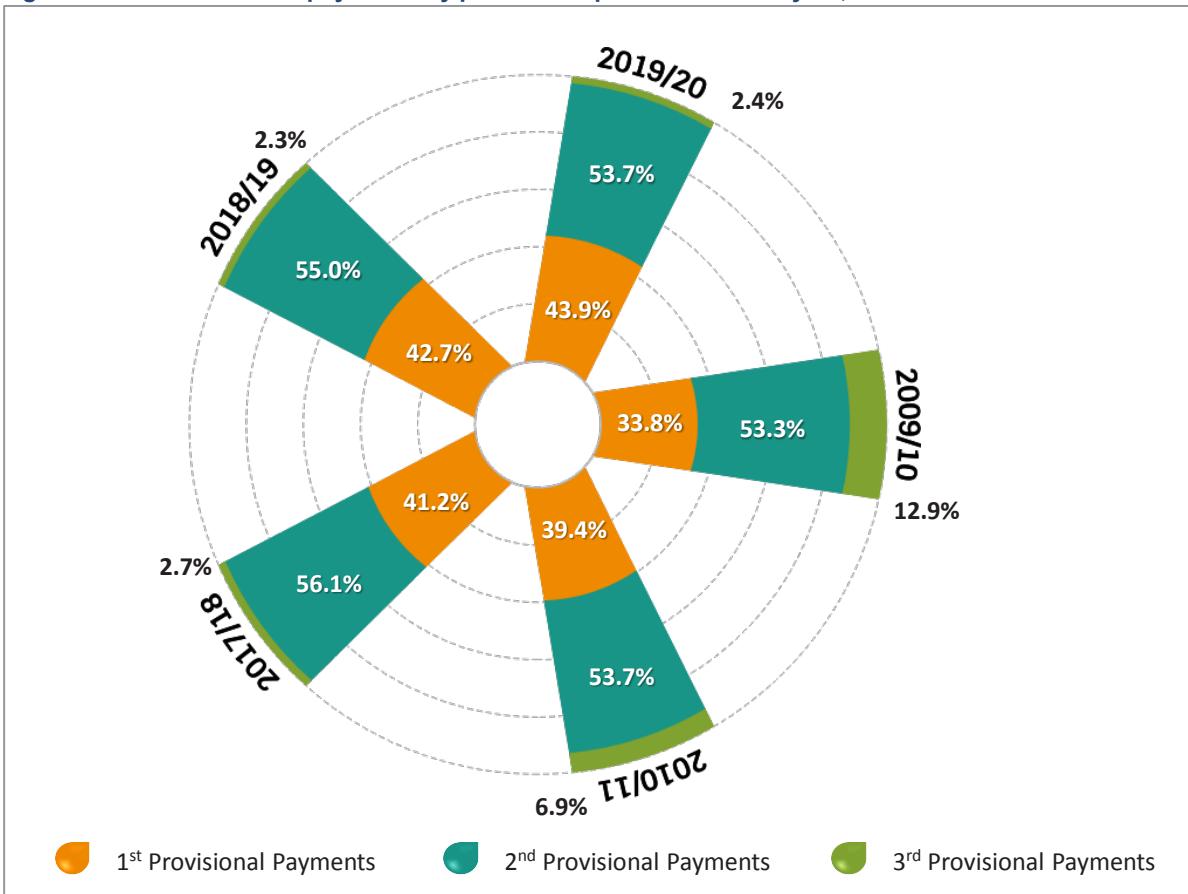

The introduction of the 80% rule improved CIT compliance and brought most of the CIT collections into the applicable year of assessment. The 80% rule also substantially reduced third provisional payments to levels well below the allowable 20%.

Figure 3.2 shows the shift from third provisional tax payments to first and second provisional tax payments by provisional period and fiscal year from 2009/10 to 2019/20. Third provisional tax payments declined from 12.9% of total provisional tax collections in 2009/10 to 2.4% in 2019/20 and have remained on average at 2.8% for the past four fiscal years (Details can be seen in *Table 3.1.1*), which is below the maximum allowed rate of 20%.

# COMPANY INCOME TAX

Figure 3.2: Provisional tax payments by provisional period and fiscal year,

## Company tax-year

Companies are allowed to select their own financial year-ends and these need not coincide with the fiscal year (i.e. from 1 April to 31 March) or the period 1 March to the end of February which is traditionally the tax year for individuals. The year of assessment, or tax year, of a company corresponds with its financial year. Companies may choose financial years ending in any month of the year. Hence, not all CIT paid in a tax year is attributable to income earned in the same year, due to the system of provisional tax payments and tax returns being submitted and assessed not later than a year after the respective company's year-end.

For this reason, provisional tax payments for a specific tax year are made over three fiscal years as illustrated below in *Table 3.2*.

# COMPANY INCOME TAX

*Table 3.2 illustrates the provisional tax payment timeline as determined by the companies' financial year-end.*

**Table 3.2: Example of timeline for provisional tax payments**

1. If the tax year of a company ends at the end of February, the third payment is then due seven months after the end of the tax year. In this case the third payment for 2019 would be due on 30 September 2019.

The five largest groups of CIT provisional taxpayers are those with financial years ending in February, March, June, September and December. Companies with June and December year-ends contribute approximately 60% to the total provisional tax payments for any fiscal year. These are companies in the *Finance* (mainly the Banks) as well as the *Mining and Quarrying* sectors. *Figure 3.3* shows a breakdown of 2017 and 2018 provisional tax payments according to the different financial year-ends.

The assessments for a tax year are lagging as a result of the provision that tax returns must be filed not later than a year after the respective company's year-end. However, the provisional tax payment system is designed to ensure that all or almost all payments in respect of a company's final CIT liability are received earlier. Provisional tax payments for a specific tax year are made over several fiscal years, as illustrated in *Table 3.3*. During 2018/19, about 51.6% of the tax paid related to the 2018 tax year and 47.4% related to the 2019 tax year.

# COMPANY INCOME TAX

The collection of provisional tax (a major contributor to CIT) has since recovered from the time it dropped to its lowest level of R135.1 billion in 2009/10 over the period of 2008/09 to 2019/20 due to the global financial crisis. It has grown by a compound annual growth rate (CAGR) of 5.3% over the past ten years, from R137.1 billion in 2010/11 to R217.4 billion in 2019/20. Total CIT collections amounted to R215.0 billion in 2019/20. Although this was higher in nominal terms than the R167.2 billion collected in 2008/09 (before the global financial crisis), it still represents a decline in real terms. For the 2016 tax year, 26.0% of assessed companies had assessed losses (mostly incurred during and brought forward from the period of the global financial crisis). This ratio has worsened, as 26.7% of assessed companies had assessed losses in 2017. The volatility of company profits can be seen again as the ratio of assessed losses has increased again in the latter tax years, 28.2% in 2018 and 31.1% in 2019. This is likely to deteriorate even further as the 2019/20 fiscal year ended on a depressed note with the start of the lockdown as a result of the COVID-19 pandemic on South African struggling economy.

*Table A3.1.1* shows provisional tax payments by company financial year-end, provisional period and fiscal year. *Table A3.1.2* shows the same information by tax year. *Table A3.2.1* provides a breakdown of provisional tax payments by sector and by fiscal year.

*Figure 3.4* provides a further breakdown of the fiscal year collections recorded in *Table 3.3* by disaggregating it by monthly collections where the significant contributions of the June and December financial year-end companies are evident.

**Figure 3.4: Monthly provisional tax payments by companies for fiscal years, 2016/17 - 2019/20**

## NUMBER OF COMPANIES ON THE TAX REGISTER AND EXPECTED RETURNS

On 31 March 2020, SARS had close to 2.5 million companies on its register. The broadening of the tax base, through education, outreach and enforcement initiatives has contributed to the increase in the number of companies on register in the past. The interactive link between SARS and the Companies and Intellectual Property Commission (CIPC) that automatically registers all companies for tax when they register with the CIPC also facilitated this significant growth in the tax register. A comparative data analysis of the CIT register against internal and third party data sets was conducted during the 2017/18 fiscal year; and as a result of this analysis, a significant number of companies which had no taxpayer activity since 2008 were removed from the register. This analysis was repeated during the 2018/19 fiscal year where inactive companies were removed from the register. This resulted in a decline in the number of companies from 3.7 million as at 31 March 2017 to 2.0 million as at 31 March 2019. The increase in the number of companies in 2018/19 was as a result of companies that have continued to register at CIPC taking advantage of a lower average registration time of 1.45 days during CIPC's 2018/19 financial year. Furthermore, most of the 2.5 million companies on register as at 31 March 2020 were inactive or dormant, and only 832 996 were expected to submit returns for the 2019 tax year.

In February 2014, the International Monetary Fund (IMF) launched the Tax Administration and Diagnostic Tool (TADAT) that defines the filing rate for CIT and PIT as the extent to which returns expected from registered taxpayers are filed. A similar definition was subsequently adopted in the *Tax Statistics* publications. The proportion of returns that have been received by SARS are more appropriately measured against the number of returns expected to be submitted than against the number of taxpayers on the register.

The number of returns expected for a particular tax year is determined by the number of companies that have been assessed for that tax year, plus the number of companies with an "active" status that were assessed in respect of either of the two tax years prior to the relevant tax year, but have not yet been assessed for the tax year in question.

The number of companies expected to submit returns was 939 781 in the 2018 tax year, however this was lower than the 2017 tax year where the expected number was 1 014 418. For 2018, 83.0% of the companies expected to submit returns had been assessed by the 31<sup>st</sup> of July 2020, whilst only 63.1% of the companies expected to submit returns in 2019 were assessed (*Table 3.4*). At the time of extraction, the number of assessments recorded for 2019, the most recent completed tax year, was relatively low because taxpayers have until 12 months after the end of their financial year to submit their returns.

# COMPANY INCOME TAX

**Table 3.4: Number of companies, 2016 – 2019**

Date	Registered <sup>1</sup>	Percentage growth in register	Tax year	Expected to submit returns <sup>2</sup>	Assessed	Percentage assessed
31-Mar-17	3 732 416	13.8%	2016	1 048 203	963 824	92.0%
31-Mar-18	3 202 007 <sup>3</sup>	-14.2%	2017	1 014 418	913 766	90.1%
31-Mar-19	2 020 759 <sup>3</sup>	-45.9%	2018	939 781	780 460	83.0%
31-Mar-20	2 548 975	26.1%	2019	832 996	525 487	63.1%

1. Excludes cases where status is in suspense or address unknown. The tax year for companies is normally the financial year of the company for financial reporting purposes.

2. These are companies that are active and not dormant.

3. A comparative data analysis of the CIT register against internal and third party data sets was conducted, a significant number of companies with no taxpayer activity since 2008 status was thus changed to dormant.

## Provisional tax as an indicator of the completeness of assessments

The value of provisional tax collections for previous tax years (2016 to 2018 tax years) has been or was more than 95% of the value of the final liability as reflected in issued assessments. Provisional tax collections for a specific tax year are known by SARS well before assessments for a specific tax year are raised and this enables extrapolations of tax collections and results in analysis that is more reliable. Tax assessed as a percentage of provisional tax payments received for a relevant tax year is, therefore, a good gauge of the completeness of the issued assessments.

Table 3.5 shows the tax assessed for a specific tax year compared with the provisional tax payments received for those tax years. For tax year 2018, higher provisional tax payments were paid compared to the actual tax assessed to date (31 July 2020). Of all the years under review, the assessment process for the 2016 tax year is closest to completion; hence, the tax assessed is more or less the same as the provisional tax payments.

**Table 3.5: Provisional tax payments and tax assessed by tax year, 2016 - 2019**

R million Tax year	Provisional tax payments	Tax assessed	Tax assessed as % of provisional tax payments
2016	201 531	201 530	100.0%
2017	211 126	208 793	98.9%
2018	217 798	207 005	95.0%
2019	218 539	122 353	56.0%

The tables in the remainder of this chapter show tax assessed as a percentage of provisional tax payment collections, rather than the number of companies assessed as a percentage of companies expected to submit.

## TAXABLE INCOME AND TAX ASSESSED

### Distribution by taxable income group

Table 3.6 shows the effective tax rates for different taxable income groups of companies assessed in respect of tax year 2018. Although the statutory company tax rate is fixed at 28%, some companies are liable for CIT at different tax rates due to sector and segment specific dispensations and deductions. The effective tax rates for companies will therefore also be different due to different allowable deductions.

# COMPANY INCOME TAX

These include long-term insurance companies, oil and gas companies, gold mining companies and SBCs (the impact of which can be seen mainly in the R1 to R1 million taxable income grouping). The taxable income total in the table below is based on taxable income in excess of R0 whilst the number of taxpayers and tax assessed totals are the totals for all categories. The effective tax rate for all categories is less than 28% even though there are penalties included in the tax assessed and this is also as a result of tax rate variations as described above.

**Table 3.6: Number of companies, taxable income and tax assessed, 2018**

Number	Number of taxpayers	Taxable income (R million)	Tax assessed (R million)	Effective rate <sup>1</sup>
Loss	219 730	-1 090 915	599	N/A
R nil	363 794	—	154	N/A
R1 to R1 million	160 488	32 159	6 563	20.4%
R1 million to R100 million	35 685	241 404	67 433	27.9%
R100 million +	763	481 698	132 255	27.5%
<b>Total</b>	<b>780 460</b>	<b>755 261</b>	<b>207 005</b>	<b>27.4%</b>

1. The Effective rate is calculated as Tax assessed divided by Taxable income.

Figure 3.5 shows the distribution of the number of companies assessed, their taxable income and the tax assessed for 2018.

**Figure 3.5: Assessed companies, taxable income and tax assessed by taxable income group, 2018**

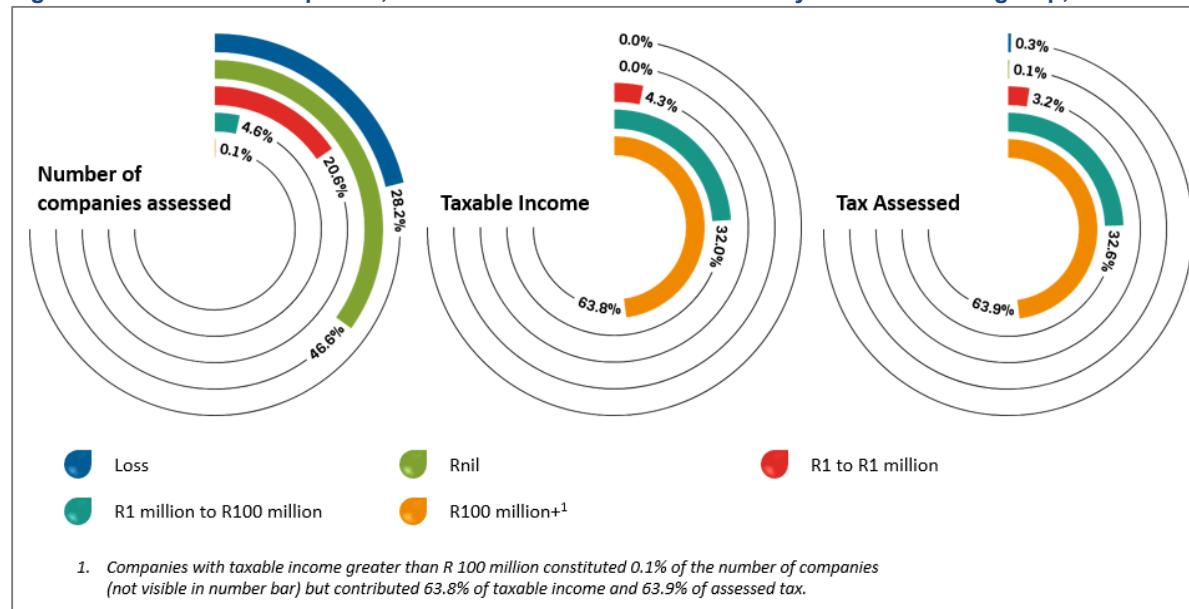

Table A3.3.1 depicts taxable income and tax assessed by taxable income group for all assessed companies. For the 2018 tax year, 25.2% of all assessed companies reported positive taxable income, a further 28.2% reported assessed losses and the remaining 46.6% reported zero taxable income.

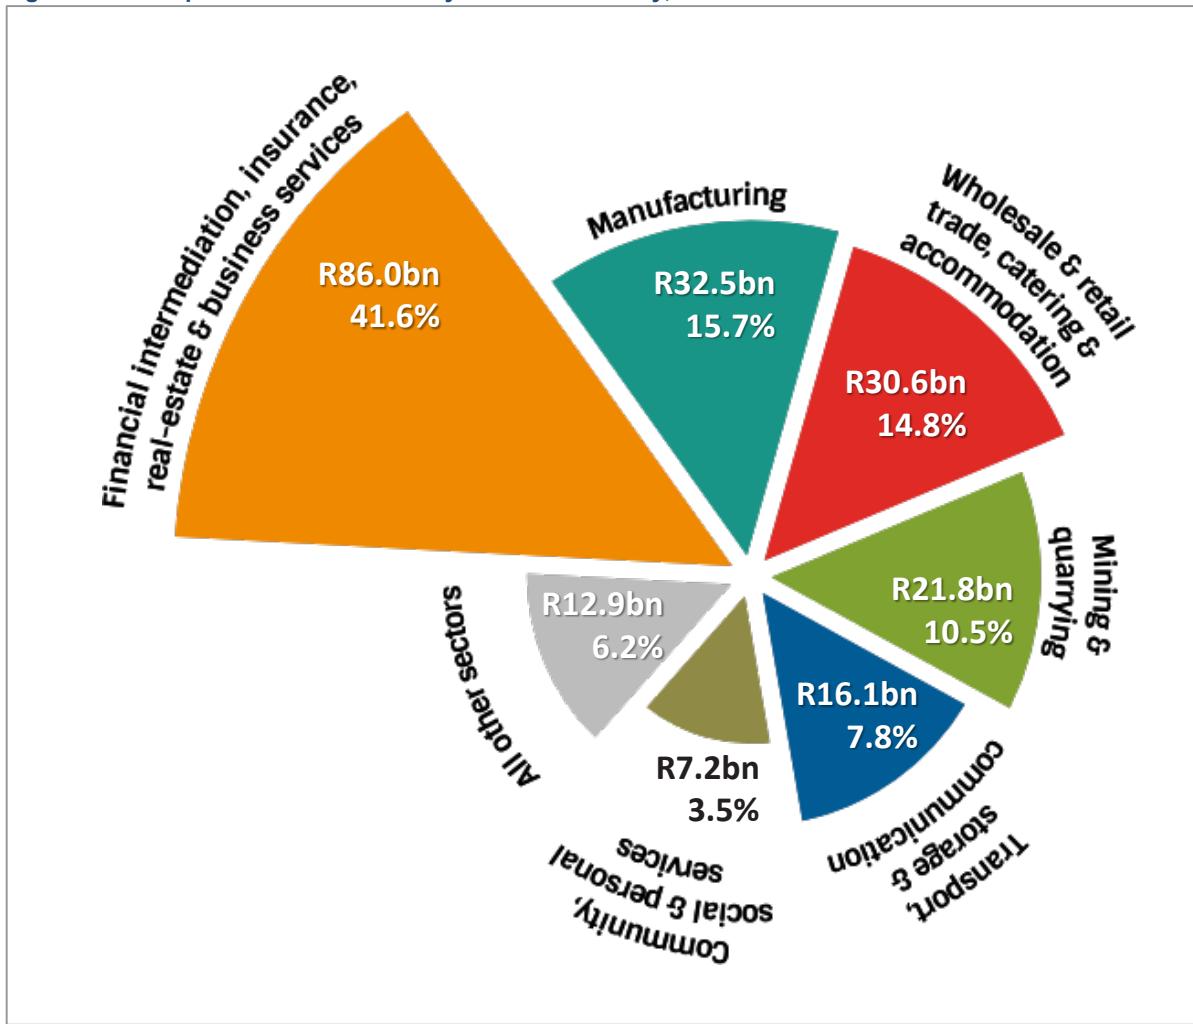

Table A3.3.2 shows that 57.3% of the tax assessed in 2018 was paid by large companies with taxable income in excess of R200 million. These companies comprised only 0.2% of the total number of companies assessed that had positive taxable income. However, almost 96.8% of the total number of companies assessed that had positive taxable income with taxable income between R1 to R10 million, only paid 15.5% of the tax assessed in 2018. This illustrates the concentrated corporate sector of the South African economy.

# COMPANY INCOME TAX

## Distribution by sector

As at 31 July 2020, the *Financial intermediation, insurance, real-estate & business services* sector had the highest number of taxpayers (25.7% assessed) in respect of the 2018 tax year. This sector accounted for 41.6% of the tax assessed in respect of the same tax year. The sector with the lowest number of taxpayers (0.4% assessed) in respect of 2018 tax year was the *Mining and quarrying* sector but this sector accounted for 10.5% of the tax assessed. (See *Table A3.4.2* and *Figure 3.6*).

**Figure 3.6: Companies' tax assessed by economic activity, 2018**

*Table A3.4.1* shows the taxable income and tax assessed by sector for all companies. *Table A3.4.2* uses SARS sector codes to classify assessed information according to the Standard Industrial Classification (SIC 5). It should be noted that SARS' sector codes are not yet aligned with the SIC 5 system used by Statistics South Africa.

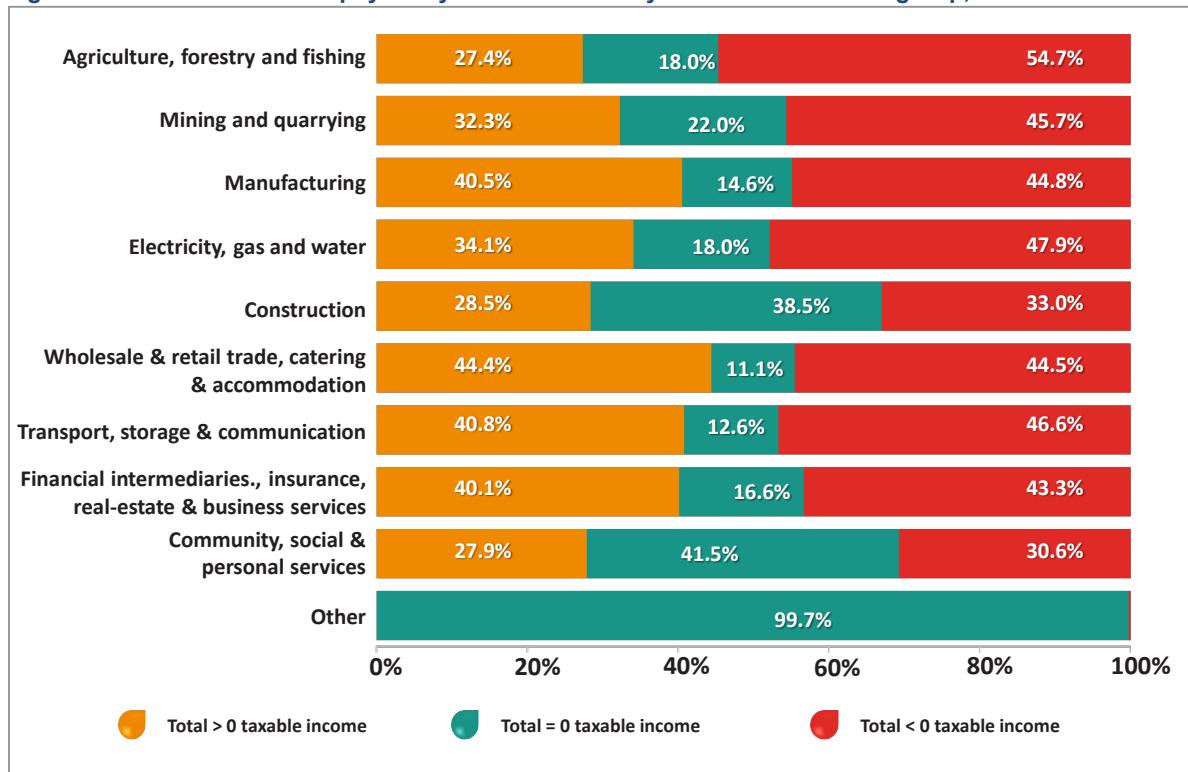

*Tables A3.4.3* to *A3.4.5* show the number of companies reporting positive, negative (assessed loss) and zero taxable income.

*Tables A3.5.1* to *A3.5.8* show the number of taxpayers and the tax assessed by economic activity, as displayed in *Table A3.4.2*, disaggregated in taxable income groups for each of the tax years.

# COMPANY INCOME TAX

Figure 3.7 shows the distribution of taxpayers by economic activity, and taxable income groups, for the 2018 tax year. It also shows that across all sectors most companies reported negative or zero taxable income.

**Figure 3.7: Distribution of taxpayers by economic activity and taxable income group, 2018**

## Tracking of taxable income and tax liability of a cohort across 10 consecutive tax years, 2009 - 2018

To track the variances in taxable income of corporate taxpayers over a 10-year tax period, all corporate taxpayers that were assessed for every tax year from 2009 to 2018 were identified and their taxable income and assessed tax was analysed. There were 351 540 corporate taxpayers, a slight improvement of 4.2% in the number of taxpayers included in the current cohort across 10 consecutive tax years compared to the period 2008 to 2017.

The cumulative taxable income (including positive taxable income and assessed losses) of these corporate taxpayers decreased by a CAGR of 202.6% from R126.8 billion in 2009 to an assessed loss of R159.1 billion in 2018. This substantial negative growth was driven mainly by companies in the taxable income grouping of less than R500 000 or lesser (Table 3.8.2). The number of companies in this cohort with positive taxable income (accounting for approximately 32.8% to 35.2% of the total population) was less compared to companies with an assessed loss (accounting for approximately 34.0% to 38.5% of the total population). Initially companies with a positive taxable income had sum taxable income a value of R395.8 billion in 2009, this value grew to R661.4 billion in 2018. Assessed losses also grew during the same period from R269.1 billion in 2009 to R820.5 billion in 2018. The assessed losses exceeded taxable income particularly in the last 3 tax years (2016 to 2018). These assessed losses will be carried forward by these companies to be offset against future positive taxable income and will thus impact on the tax assessed revenue receivable.

# COMPANY INCOME TAX

Average taxable income across the 10-year period has deteriorated substantially, in particular for companies with taxable income of less than R500 000 per annum due to the companies moving from either a positive taxable income position to an assessed loss or zero taxable income position.

*Table 3.7 illustrates the taxable income and tax assessed, in the 2009 taxable income groups, for the common companies assessed for the 2009 - 2018 period.*

**Table 3.7: Assessed companies: taxable income, tax assessed and effective tax rate by taxable income group, 2009 and 2018**

During the first year of the 10-year tax period, exchange rates appreciation, higher demand for commodities as well as higher commodity prices contributed to the growth in taxable income prior to the global financial crisis. Towards the end of 2009, the effect of the global financial crisis started to take its toll as can be seen in cumulative taxable income which decreased to R126.8 billion in 2009 and continued to decrease even further in 2010 to R89.9 billion. Although there was a slight improvement between 2011 to 2013 where taxable income remained constant, the taxable income for the latter years subsequently declined due to lower demand as well as lower prices that had a negative effect on corporate profitability. There was an increase in companies that moved into an assessed loss position particularly during the last 3 tax years (2016 to 2018).

Nonetheless, the value of tax assessed for the 351 540 corporate taxpayers common to the 10-year period increased although at a lower CAGR rate of 5.6%, from R112.4 billion in respect of tax year 2009 to R183.9 billion for tax year 2018.

*Table 3.8 shows assessed company taxpayers and taxable income, according to the age brackets defined in the 2009 tax year.*

Total CIT assessed increased from R132.1 billion for the 2009 tax year to R207.0 billion for the 2018 tax year, an increase in the CAGR rate of 5.1%. The group of 351 540 common corporate taxpayers' proportional contribution to total tax assessed increased from 85.0% (R112.4 billion of the 2009 CIT assessed) to 88.9% (R183.9 billion of the 2018 total CIT assessed).

The 10-year segment experienced a slightly higher CAGR rate of 5.6% for total tax assessed compared to an overall CAGR rate of 5.1% for all companies. This is indicative that this segment contributed to the growth of tax revenue for the period post 2008. This is due to established large companies showing an improvement and resilience in income despite the prevailing economic challenges. Companies in the taxable income grouping of more than R50 million per annum, recorded an increase in tax assessed since 2009. The concentrated nature of the South African economy is again evident as on average over the 10-year period 1 038 large companies (0.9% of companies with positive taxable income) with taxable income of more than R50 million per annum were liable for 72.2% of the CIT assessed.

Tables A3.8.1 to A3.8.4 show number of taxpayers, cumulative taxable income, cumulative tax assessed and effective tax rates by taxable income group from 2009 to 2018.

# COMPANY INCOME TAX

## COMPANIES WITH ASSESSED LOSSES OR PROFITS

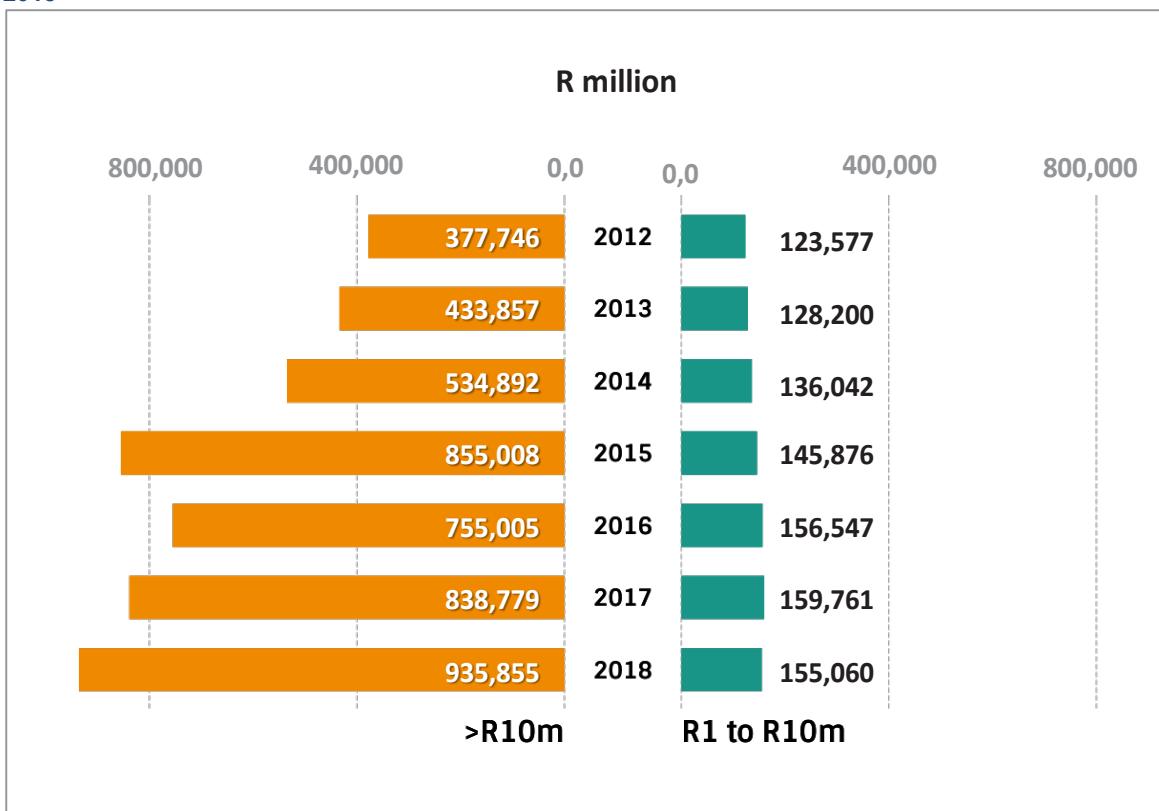

Assessed tax losses for companies may include losses incurred during a specific tax year as well as assessed losses brought forward from previous tax years. If a company, therefore, has a taxable profit for a specific tax year, it is possible that the company could still be in an assessed loss position if the taxable profit for the year was insufficient to clear the assessed loss brought forward.

The *Financing, insurance, real-estate & business services* sector contained the highest proportion of companies with assessed losses in 2018 (14.4%), followed by the *Construction* sector (8.0%) and the *Agencies and other services* sector (6.0%).

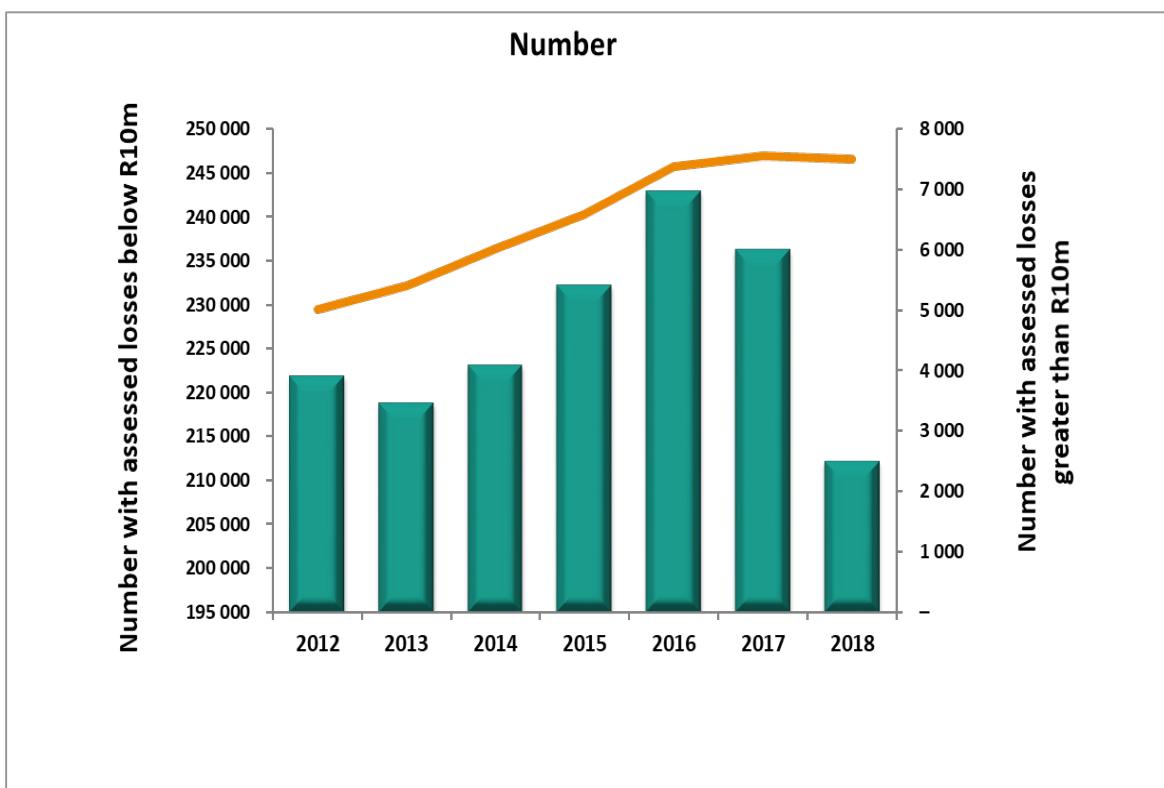

Table A3.6.1 shows the total number of companies with assessed losses or profits by sector.

Figure 3.8 shows the number of taxpayers with assessed losses by tax year, 2012 to 2018.

**Figure 3.8: Value of assessed losses and number of taxpayers with assessed losses by tax year, 2012-2018**

# COMPANY INCOME TAX

The number of companies reporting assessed losses, as well as the value of assessed losses, increased sharply after the global financial crisis. The value of assessed losses for companies with losses greater than R10 million declined significantly at a rate of 11.7% in respect of tax year 2016 compared to a growth rate of 59.8% in 2015. The value of these assessed losses then subsequently increased by 11.1% and 11.6% in 2017 and 2018 respectively, which is indicative of a deterioration in company income that is taxable. The value of assessed losses for companies in the R1 to R10 million range, however, increased marginally by 2.1% in 2017 from a growth rate of 7.3% in 2016. This was followed by a decline in assessed losses of 2.9% in the 2018 tax year, particularly for companies in the R1 to R10 million range. The number of companies with assessed losses worth more than R10 million peaked in 2016 from the 2015 tax year, and increased albeit at a slower pace in the 2017 tax year, before declining in the 2018 tax year. However, the number of companies with assessed losses in the R1 to R10 million range has been on a declining trend for the period from 2011 to 2013. This number grew substantially between 2014 and 2015 and hit a record high in 2016 but it has subsequently been declining from the 2017 tax year.

# COMPANY INCOME TAX

## SMALL BUSINESS CORPORATIONS

Companies are taxed as SBCs for a particular tax year if they meet specific criteria. These criteria include:

- Gross income of not more than R20 million;
- Limitations on shareholding in the company; and
- The taxpayer must indicate on the annual tax return that it qualifies to be taxed as an SBC.

SBCs benefit from graduated income tax rates (progressive taxation) rather than the fixed tax rate of 28%. *Table 3.9* shows the increase in the SBC taxable income brackets from the 2016 to the 2019 tax years. The threshold of the first SBC bracket increased by 6.1% from R73 650 in respect of tax year 2016 to R78 150 for the 2019 tax year.

SBCs can also immediately write-off all plant or machinery used in a process of manufacture and are eligible for an accelerated write-off of certain other depreciable assets (at a rate of 50%, 30% and 20%).

**Table 3.9: Small Business Corporation tax rates, 2016 and 2019**

Tax year Rand	2016		SBC rate for 2015	2019		SBC rate for 2018	Percentage increase in top bracket
Taxable income brackets	0	–	73 650	0%	78 150	0%	6.1%
	73 651	–	365 000	7%	365 000	7%	–
	365 001	–	550 000	21%	550 000	21%	–
	550 001	–	and over	28%	and over	28%	–

In any calendar year, SBCs could be taxed by applying two different tax year rates. In 2018 they could be taxed on either 2017/2018 tax rates or 2018/2019 tax rates. This would occur because:

- 2017/2018 tax rates (rates in effect from 1 April 2017 to 31 March 2018) are applicable to SBCs with years of assessment ending between 1 January 2018 and 31 March 2018; and
- 2018/2019 tax rates (rates in effect from 1 April 2018 to 31 March 2019) are applicable to SBCs with years of assessment ending between 1 April 2018 and 31 December 2018.

*Table A3.7.1* shows the number of SBC taxpayers and the tax assessed by taxable income group. *Table A3.7.2* shows the number of SBC taxpayers and the tax assessed by sector. *Table A3.7.3* shows the number of SBC taxpayers and the tax assessed by economic activity. *Tables A3.7.4* to *A3.7.6* show SBCs reporting positive, negative (assessed loss) and zero taxable income. *Table A3.7.7* shows the tax assessed for SBCs by turnover group.

1. SARS' source of income code is used to classify according to the Standard Industrial Classification (SIC) system. SARS' source of income code is not fully aligned with the SIC system that Statistics South Africa uses.

2. Includes the following SARS sectors – Bricks, ceramic, glass, cement and similar products; Chemicals and chemical rubber and plastic products; Clothing and footwear; Coal and petroleum products; Food, drink and tobacco; Leather, leather goods and fur (excl. footwear & clothing); Machinery and related items; Metal (including metal products); Other manufacturing industries; Paper, printing and publishing; Scientific, optical and similar equipment; Textiles; Transport equipment; and Wood, wood products and furniture.

3. Includes the following SARS sectors – Catering and accommodation; Retail trade; Specialised repair services; Vehicles, parts and accessories; and Wholesale trade.

4. Includes the following SARS sectors – Agencies and other services; Financial, insurance, real estate and business services; Personal and household services; Professional and scientific services; and Research and scientific institutes.

5. Includes the following SARS sectors – Educational services; Medical, dental and other health and veterinary services; Personal, and household services; Personal and cultural services; and Social and related community services.

6. Includes where the source of income was indicated as Other (as per SARS source code) or where the source of income was left blank on the return.

## 4 VALUE-ADDED TAX

### KEY FACTS

In the 2019/20 fiscal year:

- Net VAT collections totalled R346.8 billion and grew by 6.8% compared to the previous year. Domestic VAT, which amounted to R399.3 billion and grew by 5.4%, was the key driver for the aggregate growth in net VAT. This growth was augmented by the collection of R180.0 billion in Import VAT, which grew by 2.7% compared to the prior year. VAT refunds totalled R232.5 billion and grew by 1.5%. All the growth rates in 2019/20 were quite modest compared to the double-digit growth rates in the prior year which were as a result of the 1 percentage point VAT rate hike, which came into effect on 1 April 2018;
- The subdued household consumption expenditure curtailed the growth in Domestic VAT collections, which were below expectation. Consumption was constrained by low consumer confidence and high debt levels, high costs of servicing debt as well as slow growth in employment. The main sectors that contributed to nominal Domestic VAT growth were *Financial intermediation, insurance, real estate & business services; Manufacturing; as well as Wholesale and retail trade, catering and accommodation;*
- VAT refunds increased the most in the *Wholesale and retail trade, catering and accommodation; Construction; as well as Electricity, gas and water sectors;* and
- There were 831 821 registered vendors as at 31 March 2020, of which 449 597 (54.0%) were active. Key statistics include the following:
  - The 14.1% of VAT vendors in the monthly submission category contributed 80.5% to Domestic VAT payments and received 90.2% of VAT refunds;
  - The 83.7% of VAT vendors that submitted returns bi-monthly (every two months), accounted for 19.4% of Domestic VAT payments and received 9.7% of VAT refunds;
  - Companies and close corporations comprised 78.5% of VAT vendors, individuals 16.1%, trusts 2.9%, partnerships 1.6% and the remaining enterprises 0.9%;
  - The *Financial intermediation, insurance, real estate & business services* sector is the largest sector, constituting 41.3% of the total number of active vendors;
  - VAT vendors with a turnover of R1 million or less, i.e. below the mandatory registration threshold, constituted 35.4% of the total number of active vendors;
  - On average, for each R1.00 in Domestic VAT declared, R2.83 in output tax was declared and R1.83 in input tax was claimed; and
  - On average, for each R1.00 in VAT refund claimed, R0.87 in output tax was declared while R1.87 in input tax was claimed.

## INTRODUCTION

This chapter reports on the Domestic VAT payments and VAT refunds associated with vendors active in the year as well as some information regarding Import VAT. More detail on the latter is contained in Chapter 5.

The South African VAT system is destination-based where only the domestic consumption of goods and services is subject to VAT. Value-Added Tax is therefore payable on the supply of goods and services within South Africa as well as goods and services imported into the country. It is a broad-based tax on consumption rather than a selective tax on specific products.

South African tax legislation requires qualifying businesses (referred to as VAT vendors) to register and to charge and collect VAT on their supply of goods and services. The mechanism for charging, collecting and paying the VAT to Government is a self-assessment system that allows businesses to determine their VAT liability or VAT refundable. VAT continues to be a significant source of revenue for Government and contributes on average around 26% of all tax revenue collected by SARS.

The standard rate of VAT in South Africa was increased to 15% with effect from 1 April 2018; before that date, it had remained at 14% since 1993. Value-Added Tax is levied at each stage of the production and distribution chain as value is added. It is intended to tax all consumption of goods and services except those that are exempt or zero-rated. Some basic food items, for example, are zero-rated to provide relief to low-income groups.

The zero-rate is also applied to goods or services that are exported in line with the destination basis of VAT and is intended to free these goods and services from the burden of VAT.

As mentioned above, certain goods and services are exempt supplies. These are supplies of goods and services on which VAT is not charged either at the standard or zero-rate. If a business produces only exempt supplies, it cannot register as a VAT vendor and therefore it cannot charge VAT on those supplies. Furthermore, any VAT the business incurs to produce exempt supplies cannot be deducted as input tax; for example, the rental of residential property and some financial services are exempt from VAT.

Consumers may benefit more from the zero-rating of goods and services than from exempt supplies. This is because input VAT on zero-rated supplies is claimed as an input cost by the VAT vendor and VAT is levied at zero per cent (effectively no VAT) on the sales made by the VAT vendor. In contrast, input VAT on exempt supplies may not be claimed, and output VAT may not be levied on exempt sales. The cost to the vendor of procuring goods and services in exempt supplies is therefore higher than the cost of supplies in zero-rated sales.

A VAT refund occurs when a vendor's input tax exceeds its output tax. Examples of circumstances under which this situation may occur include:

- Zero-rated supplies, such as goods for export, are produced. Input tax can be claimed for the production of such supplies but there will be no output tax against which to set off the input tax;
- Capital investments - Input tax on capital items results in large once-off input tax claims; and
- Restocking by vendors or the selling of merchandise below cost.

This chapter gives an overview of the following:

- The VAT register;
- Domestic VAT payments and VAT refunds;
- Input tax and output tax;
- The distribution of vendors by turnover group;
- The VAT efficiency factors; and
- The 10-year cohort analysis.

## THE VAT REGISTER

According to the VAT Act No. 89 of 1991, it is mandatory for a business that produces taxable supplies valued at more than R1 million in any consecutive 12-month period to register for VAT. A business may also voluntarily register if the value of its taxable supplies in the previous 12 months exceeded R50 000 or if it can reasonably be expected to exceed that amount within 12 months from the date of registration.

The number of vendors registered for VAT as well as those that are active have been increasing since 2016/17. However, the register as well as its active component have been increasing at a decreasing rate (slowing down). A vendor is regarded as active if a payment was received from or a refund made to the vendor during the fiscal year, regardless of the registration status. In 2019/20, there were 831 821 registered VAT vendors of which 449 597 were active (see *Table 4.1*).

**Table 4.1: Number of registered VAT vendors, 2016/17 - 2019/20**

Fiscal year	Registered <sup>1</sup>	Percentage growth rates	Active vendors	Percentage growth rates	Active percentage of register
2016/17	742 388	5.0%	432 072	1.6%	58.2%
2017/18	773 783	4.2%	434 981	0.7%	56.2%
2018/19	802 957	3.8%	448 710	3.2%	55.9%
2019/20	831 821	3.6%	449 597	0.2%	54.0%

1. As per register at 31 March of each year. Excludes coded cases where status is in suspense or estate or address unknown.

## DOMESTIC VAT PAYMENTS AND VAT REFUNDS

The information about Domestic VAT payments and VAT refunds, shown in *Table A4.1.1*, is drawn from the SARS Domestic VAT payments and VAT refunds database. The values shown in the table do not match the actual collections, as published in Chapter 1, for a variety of reasons, including:

- Unallocated Domestic VAT payments and VAT refunds are included in the published collection figures which are yet to be allocated to specific vendors;
- Debt equalisation by SARS where, for example, a VAT refund is set off against a CIT-related debt; or
- Journals passed to allocate Domestic VAT payments between different tax periods within the VAT system.

# VALUE-ADDED TAX

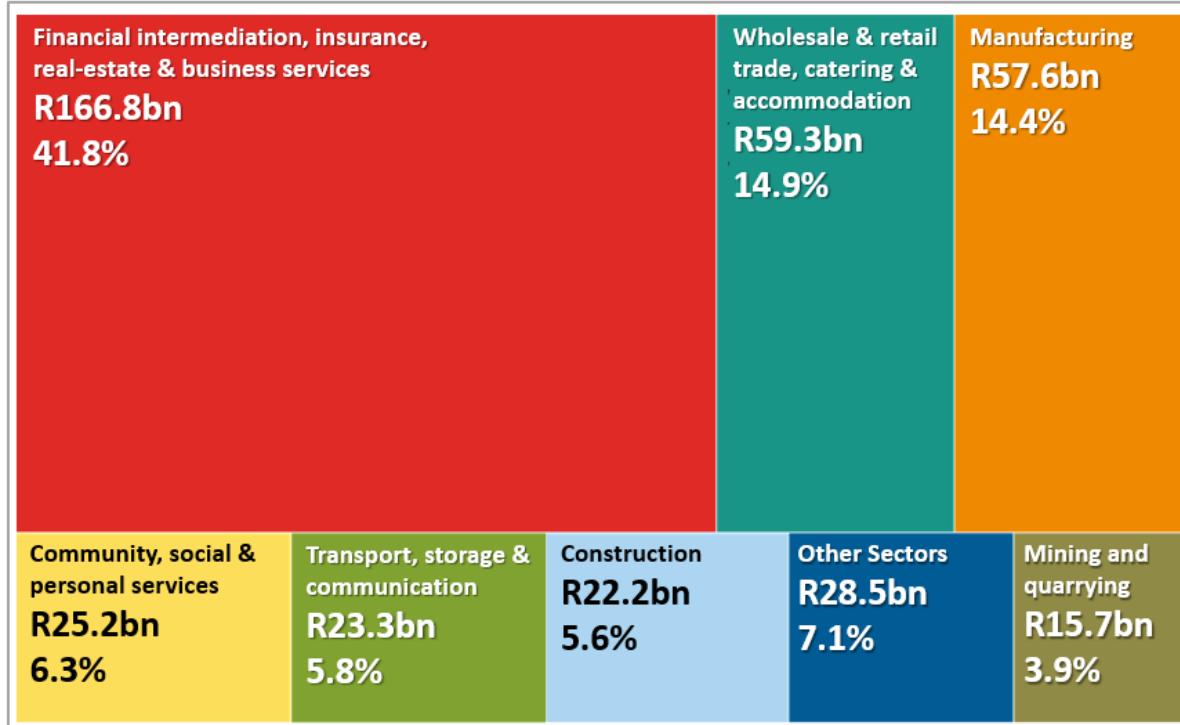

## By sector

The SARS sector codes are not yet aligned with the Sectoral Industrial Classification (SIC) 5 system used by Statistics South Africa. *Table A4.1.1* shows the number of VAT vendors, and the value of Domestic VAT payments and VAT refunds for each sector as defined by the SARS sector codes. *Table A4.1.2*, which is the source of the information shown in *Figures 4.1 & 4.2*, reclassifies the SARS sector codes according to the SIC 5 system. The three sectors with the highest number of active VAT vendors in 2019/20 were *Financial intermediation, insurance, real estate & business services* sector (41.3%) followed by *Wholesale & retail trade, catering & accommodation* (18.5%); as well as the *Agriculture, forestry & fishing* (12.4%) sectors, as shown in *Table A4.1.2*.

The *Financial intermediation, insurance, real estate & business services* sector contributed R166.8 billion (41.8%) to Domestic VAT in 2019/20, the largest contribution among all sectors. This sector received the fourth largest proportion of VAT refunds for the year amounting to R41.6 billion (17.9%).

The *Mining & quarrying* sector had the second lowest number of active vendors at only 0.7% in 2019/20 and contributed R15.7 billion (3.9%) of the total Domestic VAT payments during the period. However, these vendors received the largest proportion of VAT refunds, amounting to R50.4 billion (21.6%). The large volume of zero-rated mineral exports makes the *Mining & quarrying* sector a negative contributor to net VAT. *Figure 4.1* shows the Domestic VAT payments by economic activity.

**Figure 4.1: Domestic VAT payments by economic activity, 2019/20**

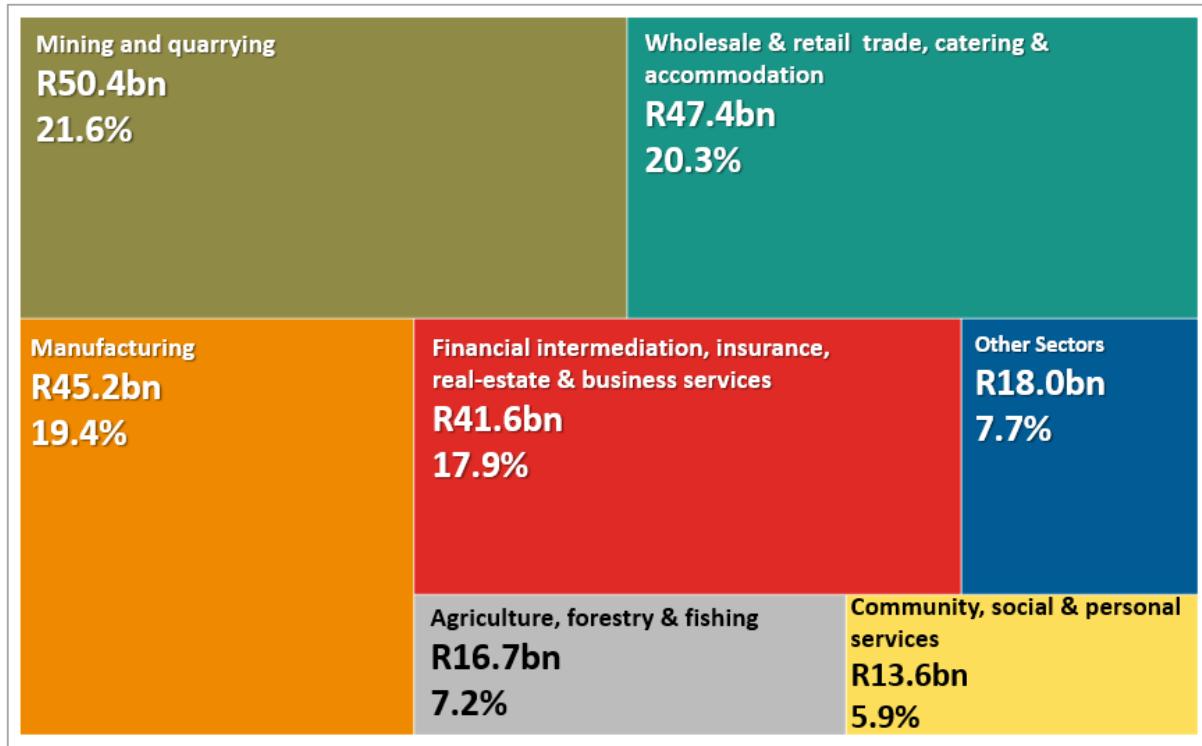

The largest total VAT refunds as seen in *Figure 4.2* were paid to the *Mining & quarrying* sector (21.6%), followed by the *Wholesale & retail trade, catering & accommodation* sector (20.3%); the *Manufacturing* sector (19.4%); as well as the *Financial intermediation, insurance, real estate & business services* sector (17.9%).

# VALUE-ADDED TAX

The *Mining & quarrying* sector; *Manufacturing*; as well as the *Wholesale & retail trade, catering & accommodation* sector (because of vehicle manufacturers) benefited from zero-rated exports; while the *Financial intermediation, insurance, real estate & business services* sector received substantial VAT refunds mainly due to vendors that offer services claiming high input tax on other goods and/services which led to the higher refunds for the year under review.

Figure 4.2: VAT refunds by economic activity, 2019/20

## By sector – including Import VAT

Table A4.2.6 provides an overview of declared Import VAT flows by SARS sector codes. Note that declarations do not always translate exactly into collections. The declared Import VAT recorded in each sector is based on bill of entry declarations and is then classified using the sector indicated by the importer's associated VAT reference number.

Although, as indicated below, the given Import VAT figures reflect declarations by importers (rather than actual Import VAT payments), there is a close relationship between the two. In 2016/17, Import VAT amounts captured on bills of entry matched 99.3% of actual Import VAT collections; this ratio reached 100.1% in 2017/18 and decreased to 98.4% in 2019/20 (see Table 4.2).

**Table 4.2: Import VAT per bills of entry vs. actual Import VAT collected, 2016/17 – 2019/20**

Fiscal year	Import VAT per bills of entry (R million)	Actual Import VAT collected (R million)	Bills of entry as a percentage of actual collected
2016/17	148 228	149 265	99.3%
2017/18	152 923	152 789	100.1%
2018/19	172 615	175 185	98.5%
2019/20	177 056	179 987	98.4%

After the inclusion of Import VAT for 2019/20, as shown in *Table A4.2.7*, the *Financial intermediation, insurance, real-estate & business services* sector remained the largest contributing sector with net VAT payments of R153.6 billion. The inclusion of Import VAT in an overall view of vendors in 2019/20 reflects a more accurate picture of the performance of VAT. For example, the contribution of the *Wholesale & retail trade, catering & accommodation* sector increased over six-fold from R11.9 billion to R80.2 billion. The overall view of the *Mining and quarrying* sector, which had a net outflow in 2019/20 before the inclusion of Import VAT, improved as a result of the inclusion; the sector's net outflow decreased from R34.6 billion to R30.4 billion.

### By payment category

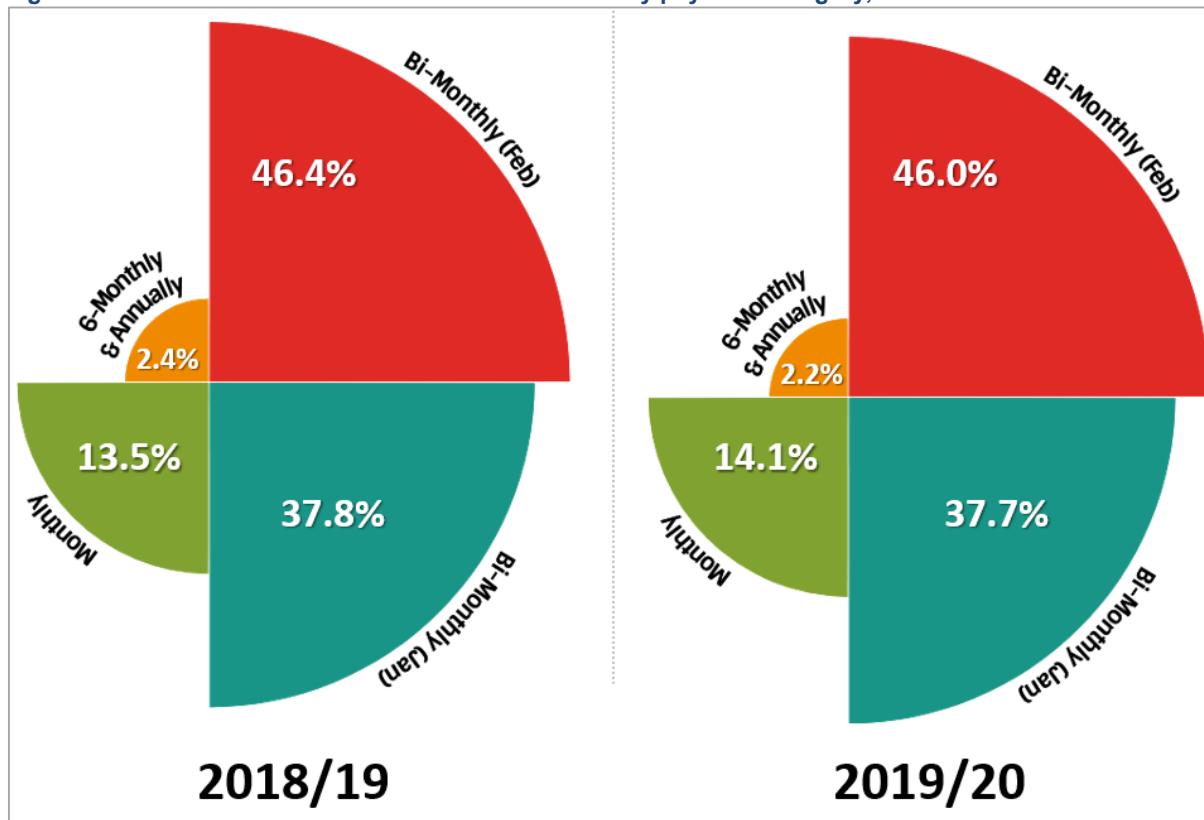

Most vendors account for and pay their VAT to SARS bi-monthly (every two months). When the value of a vendor's taxable supplies (turnover) in a 12-month period exceeds R30 million, the vendor is required to account for and pay VAT every month. Some farming enterprises are allowed to pay VAT six-monthly (twice a year).

In 2019/20, 83.7% of vendors submitted returns bi-monthly and 14.1% of vendors submitted monthly returns as is shown in *Figure 4.3*. The 14.1% of vendors that submitted returns monthly contributed 80.5% to Domestic VAT payments and accounted for 90.2% of the VAT refunds as shown in *Table A4.2.1*.

*Table A4.2.1* provides a summary of the Domestic VAT payments and VAT refunds for each of the payment categories. *Tables A4.2.2* to *A4.2.5* provide a breakdown of the Domestic VAT payments and VAT refunds by sector for the different payment categories. Most of the 63 465 vendors that fell in the monthly category in 2019/20 were in the *Financing, insurance, real estate & business services* sector (24.4%) followed by the *Retail trade* sector (12.9%).

# VALUE-ADDED TAX

Figure 4.3: Distribution of the number of VAT vendors by payment category, 2019/20

## By type of enterprise

In 2019/20, 78.5% of active VAT vendors were companies or close corporations. They contributed 92.6% to Domestic VAT payments and accounted for 90.9% of VAT refunds. Although individuals (sole proprietors) comprised 16.1% of active VAT vendors, they only contributed 2.7% of Domestic VAT payments and received just 1.2% of VAT refunds.

Table A4.3.1 shows a summary of Domestic VAT payments and refunds by type of enterprise for 2016/17 to 2019/20.

## INPUT TAX AND OUTPUT TAX

The South African VAT system is based on a subtractive or “credit input” method that allows businesses (VAT vendors) to deduct the VAT incurred on allowed business expenses (these VAT amounts are termed *input tax*) from the VAT collected on the supplies they produce (VAT collected on supplies of goods and services is termed *output tax*). A VAT vendor may deduct the VAT paid during the preceding stages of the production and distribution chain. The burden of VAT, therefore, rests on the final consumer while maintaining neutrality in the business chain. However, as suggested above, input tax may not be claimed for some expenses. These include the cost of, for example, the acquisition of motor cars or entertainment expenses.

VAT returns submitted to SARS reflect amounts payable to SARS, amounts refundable by SARS or reflect a zero liability (such a return is called a *nil* return). The input and output tax tables (Tables A4.4.1 to A4.4.3) show the values recorded by sector in the VAT return submissions (the relevant form is the VAT201 form).

# VALUE-ADDED TAX

The values for Domestic VAT payments and VAT refunds, shown in *Table A4.1.1* do not match the VAT liability shown on the VAT returns. Possible reasons for this discrepancy include:

- Adjustments may have been made during the audit process;
- Declared VAT payable amounts may not have been paid or partially paid; in this case, the difference between actual payments and the applicable liability may be part of tax debt; or
- Refunds may have been delayed due to additional verification procedures.

The total values for output tax and input tax declared are the sum of amounts reflected on all returns (given in *Table A4.4.1*), and hence include returns related to the intermediate transactions between VAT vendors. There is no output tax payable on the supply of zero-rated goods and services; however, the input tax claimed on the acquisition of these goods and services is included in the input tax totals.

As mentioned earlier, no VAT is charged on the supply of exempt goods and services and hence no input tax (or deemed input tax) can be claimed on the acquisition of such goods and services. The value of changes in the use of goods and services, amounts related to changes in accounting practices as well as amounts written off or bad debts recovered are added to or subtracted from the total output tax declared and input tax claimed. *Table 4.3* shows output tax by class of supply.

**Table 4.3: Output tax by class of supply, 2016/17 - 2019/20**

Fiscal year	Standard rate (excl. capital goods and services and accommodation)	Standard rate (only capital goods and services)	Supply of accommodation	Adjustments <sup>1</sup>	Total output tax
<b>R million</b>					
2016/17	1 263 976	36 909	2 836	12 034	<b>1 315 756</b>
2017/18	1 320 499	36 697	3 026	11 646	<b>1 371 867</b>
2018/19	1 459 836	37 543	3 281	36 029	<b>1 536 689</b>
2019/20	1 552 243	37 997	3 490	25 362	<b>1 619 092</b>
<b>Percentage of total</b>					
2016/17	96.1%	2.8%	0.2%	0.9%	<b>100.0%</b>
2017/18	96.3%	2.7%	0.2%	0.8%	<b>100.0%</b>
2018/19	95.0%	2.4%	0.2%	2.3%	<b>100.0%</b>
2019/20	95.9%	2.3%	0.2%	1.6%	<b>100.0%</b>

1. Comprises VAT of Change in use and export of second-hand goods, as well as VAT of Other and imported services.

In 2016/17 and 2017/18, the supply of standard-rated goods and services contributed more than 96.0% to total output tax, this dropped below that bar since 2018/19. Over the same period, the contribution of the supply of capital goods was below 3.0% and decreasing; this is in line with subdued business confidence levels that have led to low capital investments.

# VALUE-ADDED TAX

**Table 4.4: Input tax by class of supply, 2016/17 - 2019/20**

Fiscal year	Claimed on capital goods and services	Claimed on capital goods imported	Claimed on other goods and services	Claimed on other goods imported	Claimed on adjustments <sup>1</sup>	Total input tax
<b>R million</b>						
2016/17	110 852	7 251	912 590	119 361	11 314	<b>1 161 368</b>
2017/18	114 137	6 461	976 117	122 112	11 330	<b>1 230 157</b>
2018/19	118 961	4 833	1 072 425	144 217	36 948	<b>1 377 384</b>
2019/20	112 429	7 183	1 171 474	150 697	16 819	<b>1 458 602</b>
<b>Percentage of total</b>						
2016/17	9.5%	0.6%	78.6%	10.3%	1.0%	<b>100.0%</b>
2017/18	9.3%	0.5%	79.3%	9.9%	0.9%	<b>100.0%</b>
2018/19	8.6%	0.4%	77.9%	10.5%	2.7%	<b>100.0%</b>
2019/20	7.7%	0.5%	80.3%	10.3%	1.2%	<b>100.0%</b>

1. Comprises Change in use; Bad debts and Other.

As was the case in previous years, the largest portion of input tax declared relates to the purchase of other goods and services; in 2019/20, this class of supply accounted for 80.3% as seen in *Table 4.4*. Claims related to domestic capital goods and service purchases accounted for 7.7% of input tax. Imports (capital goods and other goods) led to a further 10.8% and the remaining input tax resulted from adjustments. Vendors do not always capture VAT on imports separately from domestic input tax, as they should. This is evident as VAT on imports claimed on VAT returns in 2019/20 amounted to R157.9 billion, while the total value of Import VAT on bill of entry declarations totalled R177.1 billion as shown in *Table 4.2*. This gap is also explained by importers that are not vendors and therefore do not qualify to claim input tax as they do not file VAT returns.

The relationship between output tax and input tax is best illustrated by calculating how much output tax is declared per R1 of Domestic VAT payable and how much input tax is claimed per R1 of VAT refundable.

*Table 4.5* illustrates that input costs, ordinary and capital expenses, do differ from one period to the next depending on business decisions made on vatable expenses and expenses on non-vatable expenses.

**Table 4.5: Output/input tax declared for R1 Domestic VAT payable and VAT refundable, 2016/17 - 2019/20**

Fiscal year	For each R1 of					
	Domestic VAT payable, there is input tax claimed of	Domestic VAT output tax declared of	Net Domestic VAT payable	VAT refundable, there is input tax claimed of	VAT refundable, there is output tax declared of	Net VAT refundable
2016/17	-1.89	2.89	1.00	-2.10	1.10	-1.00
2017/18	-2.00	3.00	1.00	-2.08	1.08	-1.00
2018/19	-2.02	3.02	1.00	-2.00	1.00	-1.00
2019/20	-1.83	2.83	1.00	-1.87	0.87	-1.00

For each R1 in Domestic VAT declared in 2019/20:

- R2.83 in output tax was declared (R1 346.1 billion ÷ R475.3 billion) (see table A4.4.2); and
- R1.83 in input tax was claimed (R870.8 billion ÷ R475.3 billion).

For each R1 in VAT refund claimed in 2019/20:

- R0.87 in output tax was declared (R273.0 billion ÷ R314.8 billion) (see table A4.4.3); and
- R1.87 in input tax was claimed (R587.8 billion ÷ R314.8 billion).

# VALUE-ADDED TAX

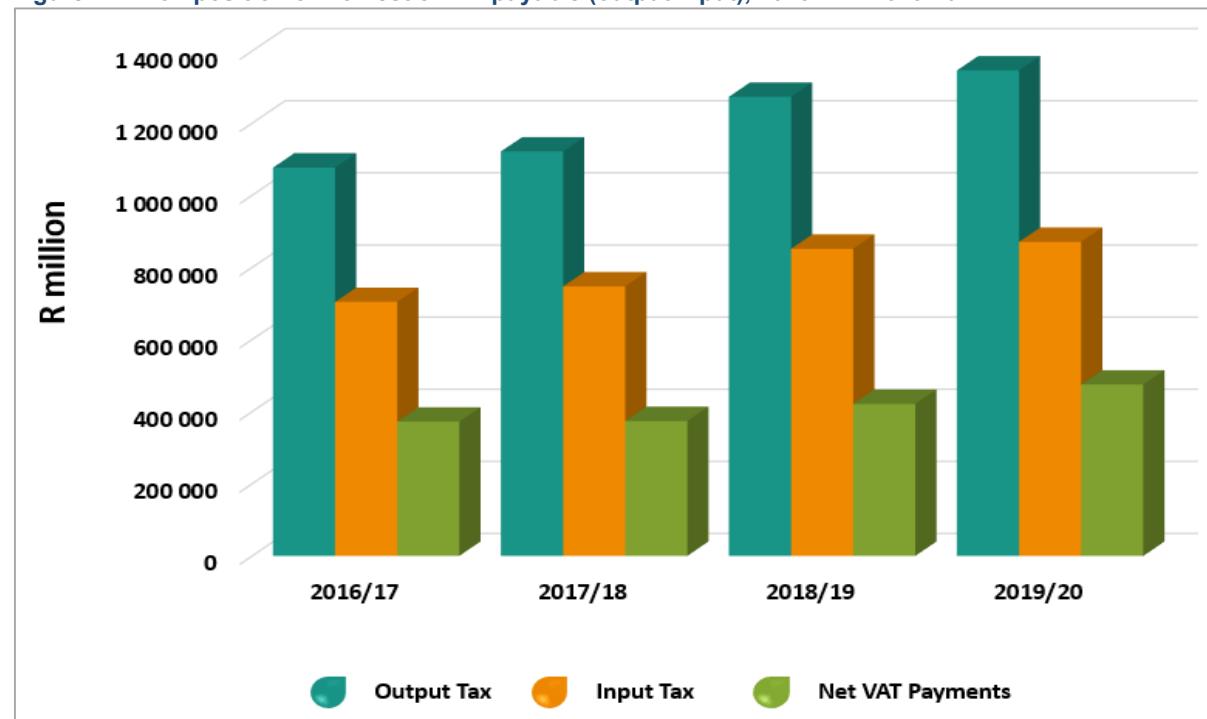

Some sectors deviate significantly from these nationally aggregated ratios. The *Mining & quarrying* sector, for example, which received refunds of R50.4 billion in 2019/20, declared only R0.36 in output tax and claimed R1.36 in input tax for each R1 of VAT refunds claimed.

Changes in output and input tax ratio per R1 of VAT payable or refundable are influenced by the following factors:

- changes in standard sales (output tax) for a given ratio of input costs claimed, or
- changes in inventory levels (increase in stock levels associated with higher claims for input costs and depletion of stock or vice versa), or
- changes in expense input costs such as administrative, rentals, maintenance and reparations for a given amount of standard sales, or
- changes in investment expenditure (claim for capital cost), or
- changes in import values (volume and rand values based on exchange value of the rand), or
- changes in zero-rated sales and exports for a given input cost ratio.

The input tax and output tax relationship is shown further in *Figure 4.4*. *Tables A4.5.1* and *A4.5.2* show these ratios for each sector.

**Figure 4.4: Composition of Domestic VAT payable (output/input), 2016/17 – 2019/20**

## DISTRIBUTION OF VENDORS BY TURNOVER GROUP

Annualised turnover, shown in *Figure 4.5* and *Table A4.6.1*, is calculated using the turnover declared by each vendor during the 12-month period of each fiscal year.

# VALUE-ADDED TAX

The calculation is performed as follows:

- If a vendor, that is registered to pay VAT monthly, submitted all 12 returns for a one-year period on time, the turnover would be calculated as the sum of the turnover declared on the 12 returns;
- If the vendor, however, submitted fewer than the 12 required returns, the projected turnover would be calculated by dividing the turnover for the specific tax periods under review by the number of returns submitted and multiplying by 12 to obtain an annualised turnover. If the vendor, for example, submitted 10 returns, the turnover would be divided by 10 and multiplied by 12.

In 2019/20, 35.4% of vendors had a turnover of R1 million or less i.e. below the mandatory VAT registration threshold. However, these vendors accounted for only 1.7% of Domestic VAT payments and 4.9% of VAT refunds. In contrast, 3.2% of VAT vendors who had an annual turnover greater than R100 million accounted for 64.8% of Domestic VAT payments and 78.8% of VAT refunds, as shown in *Table A4.6.1*.

**Figure 4.5: Distribution of VAT vendors by turnover group, 2019/20**

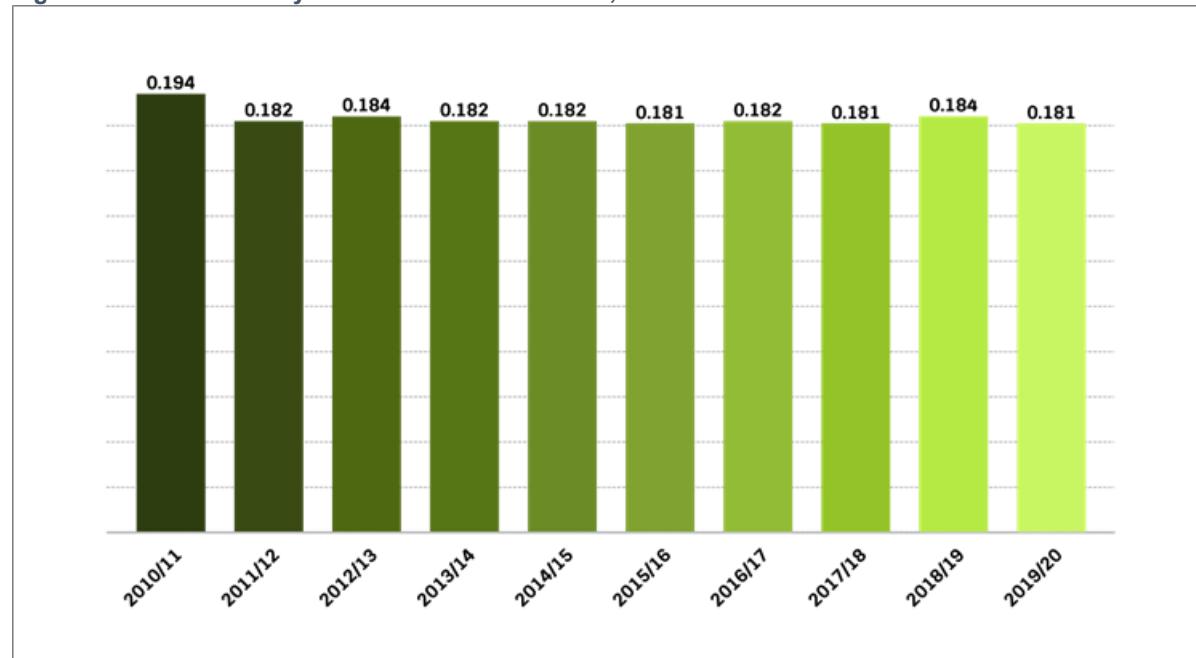

## VAT EFFICIENCY FACTORS BASED ON TURNOVER OF VENDORS

The VAT efficiency factor measures the value of VAT payments made relative to the turnover per percentage point of the VAT rate. A higher rate is an indication of improved tax administration. However, economic and policy outcomes affecting payments relative to turnover are also determined by factors such as the level of VAT refunds that are a function of the level of investment in the economy, the level of zero-rated sales and the change in export earnings.

The VAT efficiency ratios for the period between 2010/11 and 2019/20 remained fairly stable with small annual changes to this ratio except for the fiscal years 2010/11 and 2018/19 when the efficiency ratios were higher than the mean. The 2010/11 fiscal year ratio is higher due to the higher VAT collections relative to turnover mainly due to the activities related to the South African 2010 FIFA World Cup. The higher 2018/19 fiscal year ratio was mainly policy driven by the 1 percentage point increase in the standard VAT rate. The subsequent decline in this ratio in 2019/20 was due to a combination of tax base factors such as the higher increase in the sale of zero-rated goods relative to standard goods and the higher annual increase in input VAT relative to the annual increase in output VAT.

**Figure 4.6: VAT efficiency factors based on turnover, 2010/11 – 2019/20**

## TRACKING OF PAYMENTS AND REFUNDS OF A COHORT ACROSS 10 CONSECUTIVE YEARS 2010/11 TO 2019/20

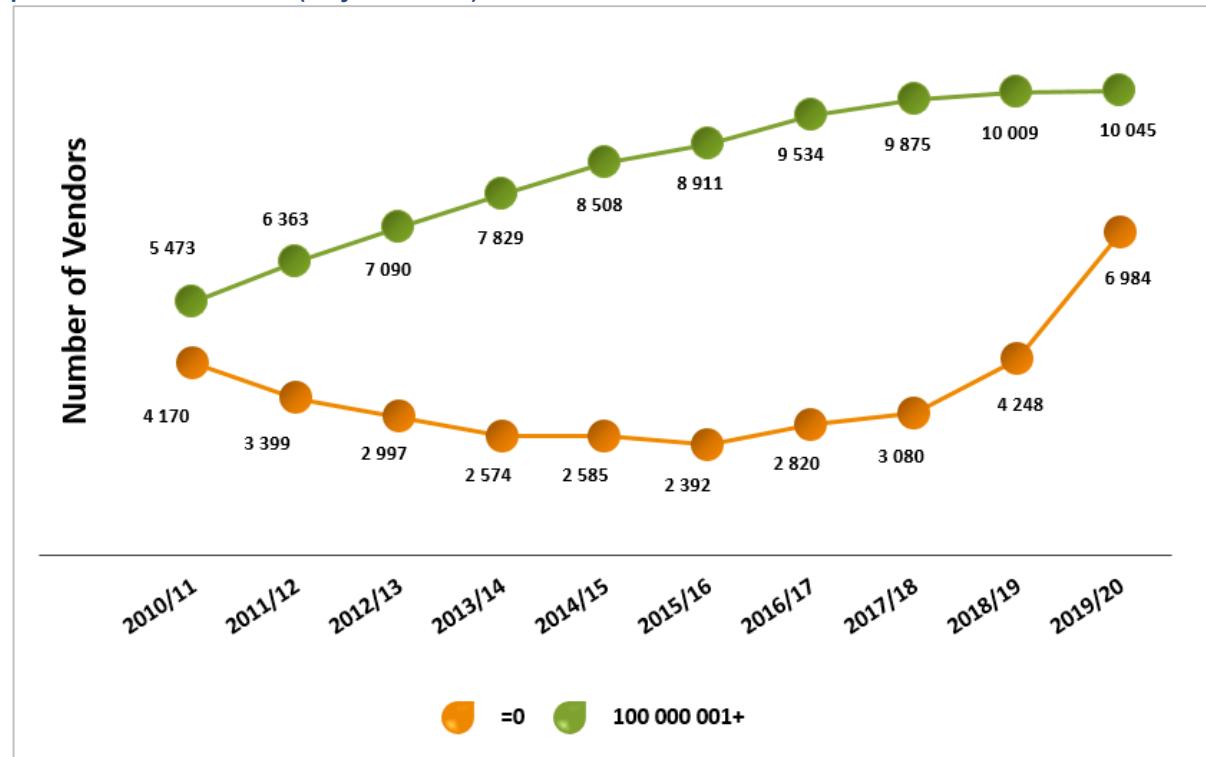

A population of active vendors that consistently filed returns, paid Domestic VAT and/or received VAT refunds over a 10-year tax period from 2010/11 to 2019/20 were grouped by turnover intervals per fiscal year. There were 225 557 vendors that met the criteria set for the population. Their number, turnover, Domestic VAT and VAT refunds were analysed for the fiscal years from 2010/11 to 2019/20.

# VALUE-ADDED TAX

The number of vendors per turnover grouping as per the base year changed each year due to some vendors migrating between the turnover groups. The 10-year series on vendor count is found in *Table A4.7.1*. The compound annual growth rate (CAGR) for the number of vendors in the base year 2010/11 and the most recent year 2019/20 is negative for most of the lower base turnover segments ranging from the R1 to R50 000 turnover bracket to the R2 000 001 to R3 000 000 turnover bracket, as shown in *Table A4.7.2*. The R3 million+ grouping increased in number, with the two largest turnover groupings of R50 000 001 to R100 000 000 and R100 million+ growing by a CAGR of 5.3% and 7.0% respectively.

The growth in numbers of the nil turnover group had a CAGR of 5.9% between the base year 2010/11 and the most recent year 2019/20. However, that growth has not occurred evenly throughout the decade as shown in *Figure 4.7* below. The number decreased compared to the previous year in four of the 10 years. There was a marked decrease in 2011/12 compared to 2010/11 when the number of vendors with nil returns decreased by 18.5%. The size of this group increased significantly in the last two years from 2018/19 to 2019/20. At a macroeconomic level, the decrease in nil returns after 2009/10 can be explained by the continued impact of the economic recovery after the financial crisis driven partly by the expansion in infrastructure for the World Cup in 2010. From 2016/17 to 2019/20, the South African economy recorded periods of technical recession that contributed to the increase in nil returns.

**Figure 4.7: Number of vendors in the lowest (Nil) and highest (R100 million+) turnover groups over the period 2010/11 – 2019/20 (10-year cohort)**

The turnover levels during the 10-year period increased for the groups of vendors with turnovers above R3 million in the base year 2010/11 as well as in the most recent year 2019/20. All groups of vendors with a turnover of less than R3 million in 2010/11 and in 2019/20 reflected decreased turnover levels. The cumulative turnover of the 10-year cohort increased by a CAGR of 7.6% from R5.8 trillion in 2010/11 to R11.4 trillion in 2019/20, as shown in *Table A4.7.2*.

# VALUE-ADDED TAX

The total Domestic VAT payments for the 225 557 vendors of interest increased by a CAGR of 7.2%, from R156.4 billion to R293.0 billion during the same period. VAT refunds paid to these vendors grew by a CAGR of 9.1% from R80.6 billion to R175.9 billion. This confirms that the economy has remained subdued over the decade as the growth rates slightly exceed the higher end of the inflation target band. The 10-year series for the 10-year cohort vendors in respect of turnover, Domestic VAT and VAT refunds are found in *Tables A4.7.3 to A4.7.8*.

The percentage change in vendor count by turnover for 2019/20 compared to 2010/11 was a decline for those vendors with a non-zero base turnover of less than R3 million per annum compared to a surge in the number of vendors with a base turnover in excess of R5 million per annum (as seen in *Table 4.6*). For all 10 years, the turnover grouping with the highest number of VAT vendors was the R1 million to R2 million per annum grouping; a 15.0% decline in these numbers was recorded for 2019/20 compared to 2010/11.

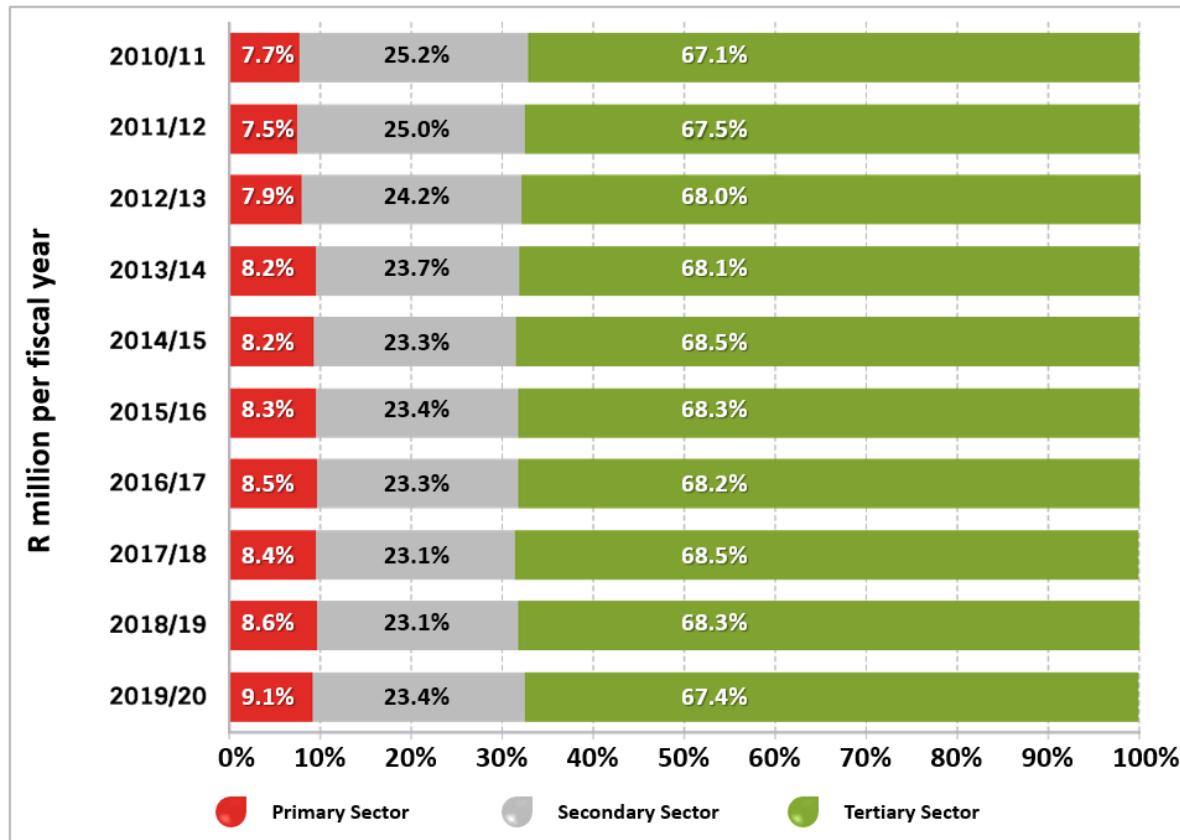

**Table 4.6: Average Annual Turnover Analysis per turnover bracket, 2010/11 – 2019/20 (10-year cohort)**

Turnover group	2010/11			2019/20			% Change in No. of Vendors	% Change in Average Turnover	Average Turnover CAGR

O: 20 000 001 to 30 000 000	6 333	154 532	24 401 017	8 270	202 168	24 445 909	30.6%	0.2%	0.0%
P: 30 000 001 to 50 000 000	5 939	229 402	38 626 308	8 353	325 978	39 025 285	40.6%	1.0%	0.1%
Q: 50 000 001 to 100 000 000	5 116	357 854	69 948 022	8 161	571 807	70 065 832	59.5%	0.2%	0.0%
R: 100 000 001 +	5 473	4 496 939	821 658 825	10 045	9 575 668	953 277 034	83.5%	16.0%	1.7%
<b>Total</b>	<b>225 557</b>	<b>5 847 068</b>	<b>25 922 796</b>	<b>225 557</b>	<b>11 350 189</b>	<b>50 320 714</b>	<b>0.0%</b>	<b>94.1%</b>	<b>7.6%</b>

In respect of the average turnover per vendor, a comparison of 2010/11 to 2019/20 shows that the highest increase of 16.0% was recorded by those vendors with a base turnover in excess of R100 million per annum. Negative growth was recorded for vendors with average base turnovers of between R1 and R100 000 as well as between R700 001 and R1 000 000 per annum. Effectively, there was minimal growth of average turnover for other groupings ranging from 0% to 1.0%. As might be expected, the average turnover CAGR for all turnover groupings ranged from -1.6% to 1.7%. The significant average total turnover percentage change of 94.1% is mainly due to inflationary growth of turnover over the decade for the 225 557 vendors under consideration, as well as the 1 percentage change in the VAT rate effected in 2018/19.

# VALUE-ADDED TAX

Figure 4.8: Distribution of sector contribution to Domestic VAT payments for 2010/11 - 2019/20

At an economic activity level, the primary sector's contribution to Domestic VAT has increased from 7.7% in 2010/11 to 9.1% in 2019/20 as seen in *Figure 4.8*. The secondary sector has shown strain, decreasing to 23.4% in 2019/20 from 25.2% in 2010/11. On the other hand, the contribution of the tertiary sector has been steady averaging a contribution of 68.0% during this ten-year period. This has been driven by the *Financial intermediation, insurance, real estate & business services* sector, which is the largest contributor and continues to do well. This detail is available in *Table A4.7.7*.

On the other hand, the sectors receiving the highest VAT refunds in the same period were *Mining & quarrying* averaging over 25.0%; *Manufacturing* over 20.0%; as well as *Wholesale & Retail trade, Catering & Accommodation* following closely with 19.0%. This is due to large volumes of zero-rated exports in these sectors. This trend is observed in *Table A4.7.9*.

# VALUE-ADDED TAX

Table A4.1.1: VAT: Payments and refunds by sector, 2016/17 – 2019/20

Fiscal year	2016/17	2017/18	2018/19	2019/20					
Sector	Number of vendors (R million)	Payments (R million)	Refunds (R million)	Number of vendors (R million)	Payments (R million)	Refunds (R million)	Number of vendors (R million)	Payments (R million)	Refunds (R million)

# IMPORT VAT AND CUSTOMS DUTIES

For the 2019/20 fiscal year

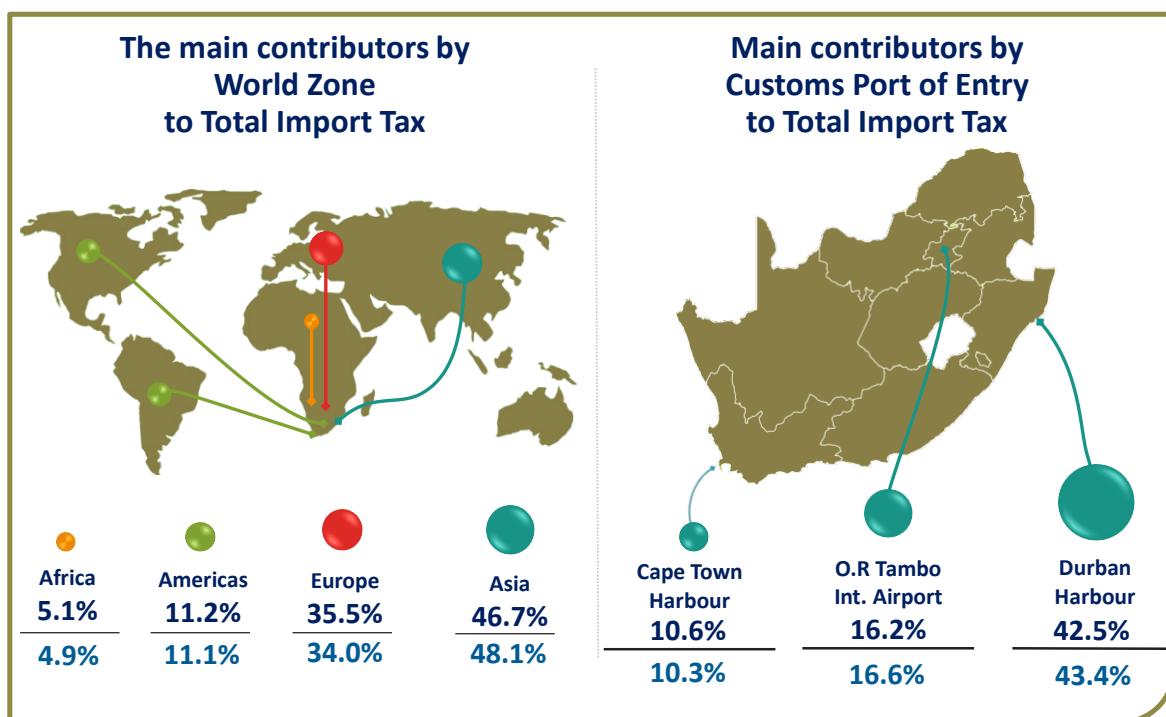

## Number of registered importers

329 820  
319 949

PY Figures (2018/19)

PY Figures (2018/19)

## 5 IMPORT VAT AND CUSTOMS DUTIES

### KEY FACTS

For the 2019/20 fiscal year:

- Import VAT collections totalled R180.0 billion and grew year-on-year (y/y) by 2.7% compared to a significant 14.7% recorded in 2018/19. This was driven by moderate levels of growth in the imports of key contributing commodities.
- Collections of Customs Duties totalled R55.4 billion and experienced a marginal y/y improvement of 0.8%, on the back of a notable 11.8% growth rate in 2018/19. Revenue from two of the sub-categories of Duties, namely Specific Excise Duties and *Ad valorem* Excise Duties contributed R7.9 billion (14.3%) and R10.5 billion (18.9%) respectively to the year's total Duty collection (referencing Sections A and B respectively of Part 2 of Schedule 1 to the Customs and Excise Act, 1964). The majority of the remaining R37.0 billion (66.8%) comprises all other Customs Duties levied, predominantly General Duties (Part 1 of Schedule 1 to the Customs and Excise Act, 1964).
- The sluggish growth rates registered by both Import VAT and Customs Duties were largely driven by restrained contributions from key commodities underpinned by an overall meagre 2.3% y/y expansion in nominal merchandise imports for the financial year 2019/20, compared to 9.8% in the prior year. The sluggish growth rates were testament of an operating environment that is economically subdued with passive levels of investment, domestic demand and household consumption. Performance towards the end of 2019/20 was further exacerbated when the first signs of the disruptive impact of COVID-19 on the global and domestic manufacturing and trade sectors weighed on South Africa's import levels and Import Tax collections.
- Import VAT and Customs Duties accounted for 13.3% and 4.1% of the year's Total Tax Revenue respectively; resulting in a 17.4% aggregate, which was slightly below the 17.6% average over the preceding five fiscal years. The share of these taxes to GDP increased to 4.6% from the preceding five-year average of 4.5%, with Import VAT and Customs Duties recording 3.5% and 1.1% for the year respectively.
- The largest driver of the year's Import VAT was *Machinery and Electronics* at 25.9%, slightly up from 25.7% in 2018/19. Notably, *Vehicles, Aircraft and Vessels* accounted for the significant portion of Customs Duties at 25.1%, dipping from 25.9% in the prior year.
- Imports from the world zones of Asia and Europe accounted for 82.2% of the combined Total Import Tax contribution, the same proportion as in 2018/19.
- On a country basis, China and Germany at 25.2% and 11.2% of Total Import Tax contribution respectively remained the principal suppliers of taxable goods into South Africa.
- The Importer register grew y/y by 3.0% to 329 820 in number, as reflected in *Table 1.1* in Chapter 1.

# IMPORT VAT AND CUSTOMS DUTIES

## INTRODUCTION

The South African Customs Administration plays an integral role in the facilitation of movement of goods and people entering or exiting the country's borders. Customs is the first line of control to secure the state's interests by regulating the movement of goods into, from and through the state's Customs territory. Goods imported into the country are subject to VAT and Customs Duties upon importation based on their Customs value, with tariff and origin of the goods having an impact on the latter as well.

The Customs value of imported goods at time of entry for home consumption is the transaction value thereof (i.e. the price actually paid or payable for the goods when sold for export to the Republic), adjusted by the addition of any dutiable charges not included in the price actually paid or payable, or the deduction of non-dutiable charges included in the price paid or payable. For the purposes of Import VAT calculations, this value is 'uplifted' by a further 10% to cover costs such as insurance and freight. No such mark-up is, however, applied in respect of goods that originate from any of the BELN countries (Botswana, Eswatini, Lesotho and Namibia) when cleared for home consumption and only VAT of 15% is calculated on the customs value.

Import VAT is levied on the importation of goods and services into South Africa in terms of the VAT Act of 1991. This is an indirect consumption tax, there are however, certain goods and services, including specific mineral oils and several basic food items, which are supplied at either zero-rate or are exempt from VAT. The standard rate of VAT in South Africa was 14% from 07 April 1993 until 31 March 2018. In the National Budget Speech 2018, the Minister of Finance announced a 1 percentage point increase in the VAT rate, bringing the rate to 15% effective from 01 April 2018. This rate increase should be taken into account when comparing Import VAT across the years.

Customs Duties are imposed under the Customs and Excise Act, 1964. They are levied on imported goods with the aim of raising revenue and protecting the local market. These duties are either levied on an *ad valorem* basis, meaning as a percentage of the value of the goods; or on a specific duty basis, which applies at a rate of cents per unit (for example: per kilogram, metre or litre). The determination of the rate applicable to each import is set out in the schedules to the Customs and Excise Act and is based on the specific tariff classification of the commodity.

It is important to note that the term "Customs Duties" when used in this chapter comprises all duties levied on imports including Specific Excise Duties and *Ad valorem* Duties; and also includes revenue for the SACU member states which is to be distributed to them according to the revenue sharing agreement, further detailed in chapter 6.

This chapter gives an overview of:

- Methodology;
- Declarations and Payment process;
- Harmonised System section;
- World zone and selected trade blocs;
- Country of origin; and
- Customs port of entry.

# IMPORT VAT AND CUSTOMS DUTIES

## METHODOLOGY

South Africa is a member of the World Customs Organisation (WCO) and therefore uses the Harmonized Commodity Description and Coding System (HS) for the classification of goods on importation.

South Africa is also a signatory to the General Agreement on Tariffs and Trade (GATT). The basis for determining customs values are provided for in the Agreement on implementation of Article VII of the General Agreement on Tariffs and Trade, 1994.

The Free on Board contract is currently the basis for customs valuation in South Africa. Section 67(1)(e) of the Customs and Excise Act, 1964 provides for the addition to the price charged for the goods, to the extent that they are not included in such a price; of transportation expenses (from factory to warehouse) and insurance, loading, unloading, handling and associated charges incidental to delivery of the goods to the place of export in the country of exportation.

## DECLARATIONS AND PAYMENT PROCESS

Customs values are declared on a Bill of Entry (BOE) to Customs at the time of importation. The tables in this chapter reflect the values as processed on these BOE transactions and may therefore differ from the actual collections. This difference is usually a result of the delay between the date of the declaration and the date that the amount payable (as reflected on the declaration) was settled.

It is important to note that the payment dates differ depending on whether or not the importer participates in the Customs deferment scheme. An importer who is registered for the Customs deferment scheme maintains an account with SARS. This account is closed every month and the amount owing has to be settled within seven days of billing. Importers not registered for the Customs deferment scheme are required to settle their liability for Import VAT and Customs Duties with a payment before the goods are released.

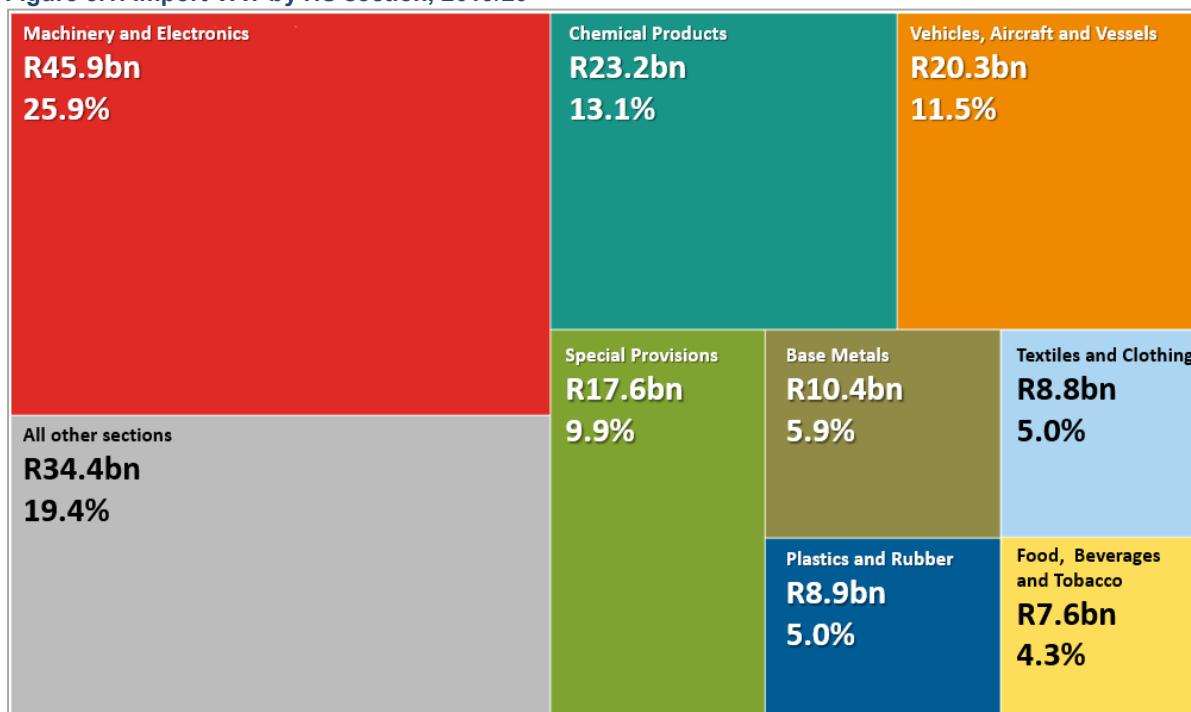

## BY HARMONISED SYSTEM SECTION

Table A5.1.1 shows the Customs value of imports, Import VAT, Customs Duties and Total Import Tax as classified by the HS section. The table shows that imports of *Machinery and Electronics* (17.7%) accounts for the largest portion of Customs value in 2019/20, followed by *Mineral Products* (14.2%) and *Chemical Products* (11.5%).

Import VAT for 2019/20, as shown in Figure 5.1, was collected mostly from the importation of *Machinery and Electronics* (25.9%); *Chemical Products* (13.1%); *Vehicles, Aircraft and Vessels* (11.5%); *Special Provisions* (9.9%); *Base Metals* (5.9%); *Plastics and Rubber* (5.0%); *Textiles and Clothing* (5.0%) as well as *Food, Beverages and Tobacco* (4.3%). The *All Other* sections grouping (19.4%) comprises the remaining 14 HS sections.

# IMPORT VAT AND CUSTOMS DUTIES

Figure 5.1: Import VAT by HS section, 2019/20

As discussed in Chapter 4, *Table A4.2.6* provides a fully aligned overview of Import VAT flows by SARS sectors. The Import VAT recorded in each sector is based on bill of entry declarations and is then classified using the VAT sector indicated by the importer's VAT reference number.

*Table A4.2.7* shows that imports under *Tertiary* economic activities accounted for 60.3% of the Import VAT total in 2019/20, with *Secondary* activities at 32.5% and *Primary* activities at 3.5%.

Import VAT from the top three contributing economic sectors made up 86.0% of the total, namely the *Wholesale and Retail Trade, Catering and Accommodation* sector (*Tertiary*) at 38.5%, followed by the *Manufacturing* sector (*Secondary*) at 29.7% and the *Financial Intermediation, Insurance, Real-Estate and Business Services* sector (*Tertiary*) at 17.8%.

The largest contributing HS sections to Customs Duties in 2019/20, as shown in *Figure 5.2*, were *Vehicles, Aircraft and Vessels* (25.1%); *Textiles and Clothing* (16.7%); *Food, Beverages and Tobacco* (15.8%) as well as *Machinery and Electronics* (11.7%).

Imports under the *Food, Beverages and Tobacco* section made up 98.5% of the Specific Excise Duty total, largely driven by cigarettes (43.4%) sourced mainly from Switzerland; and whiskies (27.3%) imported mostly from the United Kingdom.

The sections of *Vehicles, Aircraft and Vessels* (66.3%) as well as *Machinery and Electronics* (29.0%) were the largest contributors to the *Ad valorem* Duty total; with 38.7% of the former's total comprising luxury vehicles from Germany, while 68.1% of the latter's total made up by electronic devices mainly from China.

The overall effective Customs Duty rate in 2019/20 was 3.2% compared to previous year's 3.1%. Key commodities with the highest effective Duty rates were *Footwear and Accessories* at 24.8%; *Hides, Skins and Leather* at 20.4%; *Textiles and Clothing* at 16.1%; *Food, Beverages and Tobacco* at 13.0% as well as *Vehicles, Aircraft and Vessels* at 7.6%.

# IMPORT VAT AND CUSTOMS DUTIES

Figure 5.2: Customs Duties by HS section, 2019/20

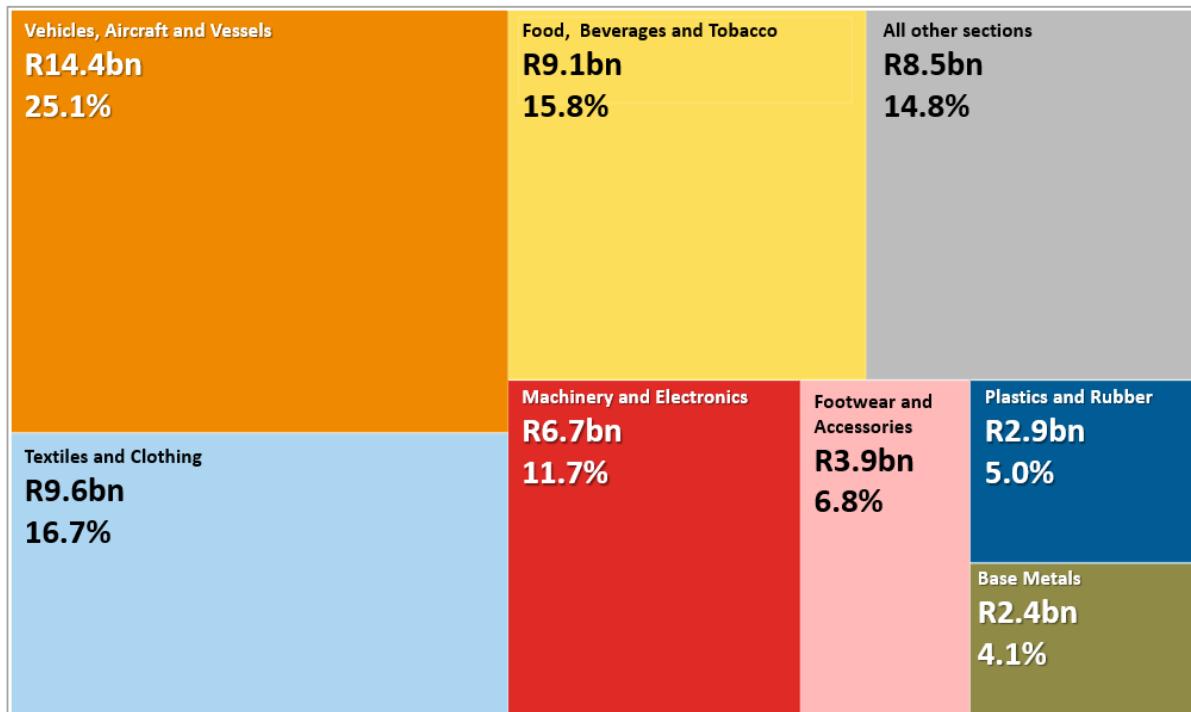

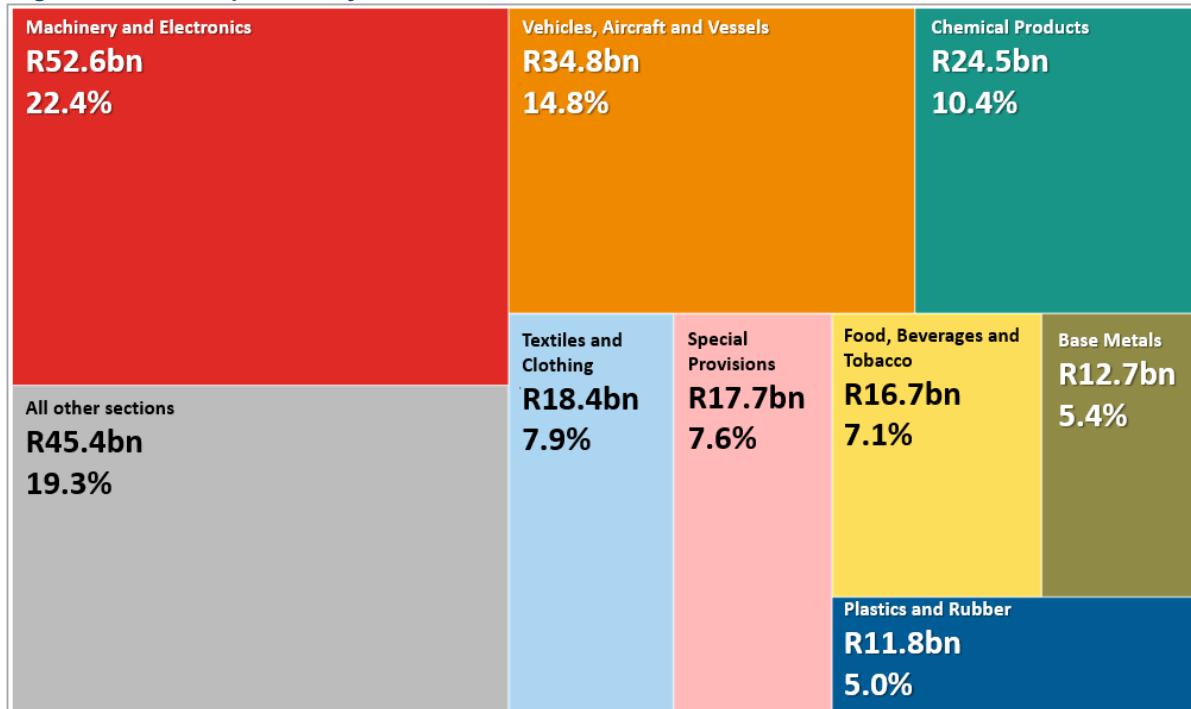

Figure 5.3 shows the top four contributing sections – *Machinery and Electronics*; *Vehicles, Aircraft and Vessels*; *Chemical Products*, *Textiles and Clothing*, *Special Provisions* as well as *Food, Beverages and Tobacco* – combined, made up more than 70% of the Total Import Tax for 2019/20.

Figure 5.3: Total Import Tax by HS section, 2019/20

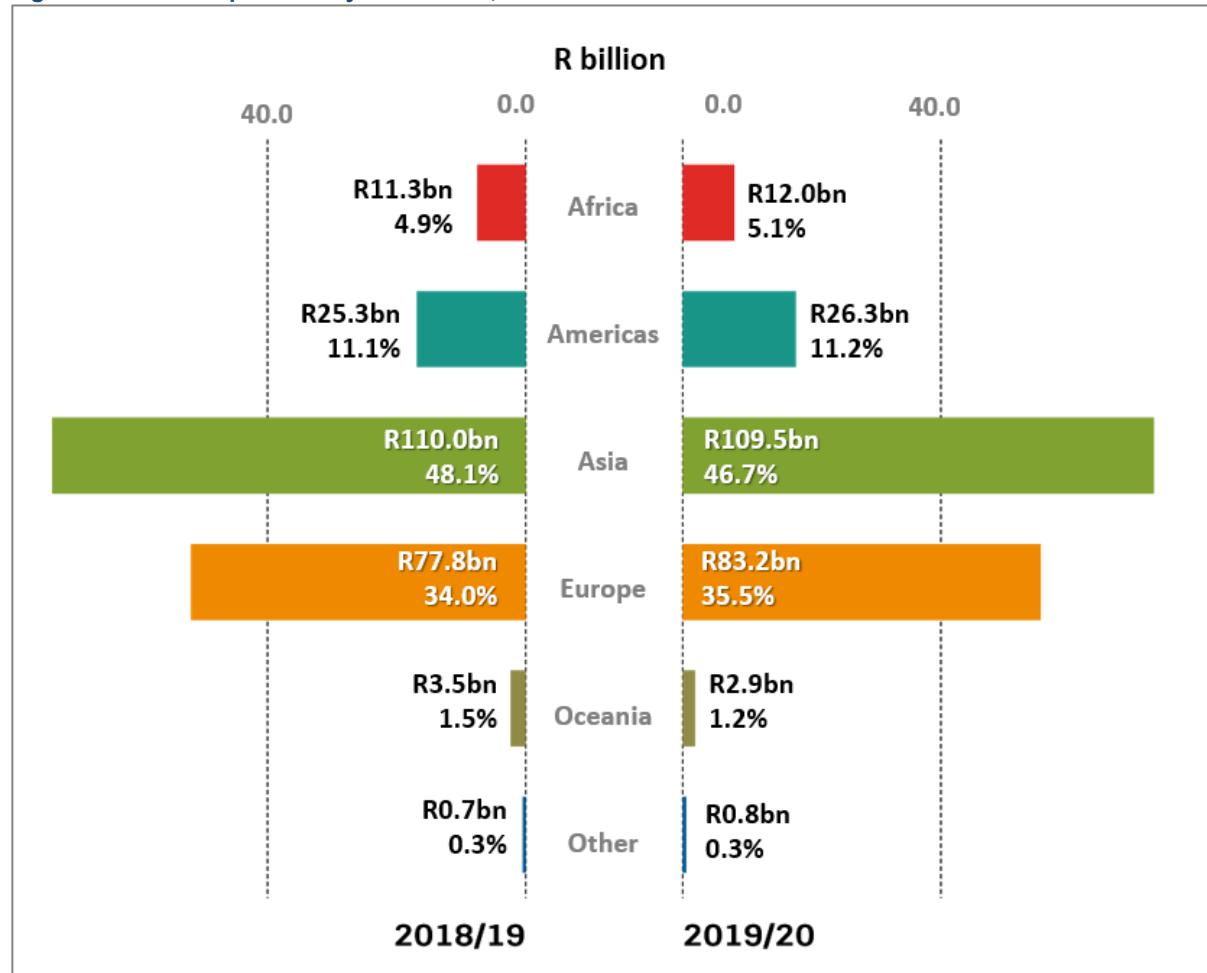

# IMPORT VAT AND CUSTOMS DUTIES

## BY WORLD ZONE AND SELECTED TRADE BLOCS

Imports from Asia accounted for 46.7% of the Total Import Tax, followed by Europe at 35.5% and the Americas at 11.2%. *Figure 5.4* and *Table A5.2.1* show the combined Total Import Tax contribution of Import VAT and Customs Duties, categorised by world zone as well as selected trade blocs.

**Figure 5.4: Total Import Tax by world zone, 2019/20**

Asia was South Africa's largest import supplier in 2019/20 at 36.8% of total Customs value, 43.7% of Import VAT and 55.9% of Customs Duties; with goods imported from China, India, Japan and Thailand accounting for 78.4% of Asia's contribution to South Africa's Total Import Tax.

Europe, the second biggest supplier, contributed 25.8% to total Customs value, 36.2% to Import VAT and 33.3% to Customs Duties; with imports from Germany, United Kingdom, Italy, Switzerland, France and Spain constituting 68.2% of Europe's share of South Africa's Total Import Tax.

The Africa world zone - which comprises the rest of Africa including BELN - continues to grow as an important strategic trade partner for South Africa; specifically in light of the African Continental Free Trade Area agreement signed in 2018, in conjunction with other existing trade agreements including SACU and SADC. In 2019, Africa remained the only world zone with which South Africa recorded a positive trade balance (R193.9 billion) which culminated into a 26.9% contribution to the Customs value as well as 5.1% to the Total Import Tax for 2019/20.

# IMPORT VAT AND CUSTOMS DUTIES

The majority of Africa's Total Import Tax contributions emanated from Import VAT at 94.1% share, with Eswatini being the continent's biggest contributor to Import VAT at 24.3%.

The growing trade with Africa in 2019/20 was further emphasized within the selected trade bloc category where the African Union (AU) was marginally ahead of the European Union (EU) as South Africa's top supplier for the second successive fiscal year, in terms of Customs value at 24.4% share, while contributing a modest 4.8% to Total Import Tax.

The EU trade bloc (still including the United Kingdom/Great Britain) recorded 24.2% of the total Customs value and 32.2% of Total Import Tax; with imports from Germany, United Kingdom, Italy, Switzerland, France and Spain being the major contributors.

BRICS was marginally ahead of EU as the largest trade bloc contributor to Total Import Tax at 32.5%, while accounting for 21.3% of the year's Customs value; with China, India and Brazil among SA's top 13 suppliers in terms of revenue.

## BY COUNTRY OF ORIGIN

Figure 5.5 shows that the top six countries of origin – China, Germany, United States, India, United Kingdom and Japan – collectively accounted for 55.7% of the Total Import Tax for 2019/20.

Goods imported from China under the *Machinery and Electronics* section contributed the most to the country's Customs value (47.7%) and Import VAT (45.5%) for 2019/20. The key imports from China that accounted largely for Customs Duties were *Textile and Clothing* (32.3%), *Machinery and Electronics* (19.9%) as well as *Footwear and Accessories* (11.7%).

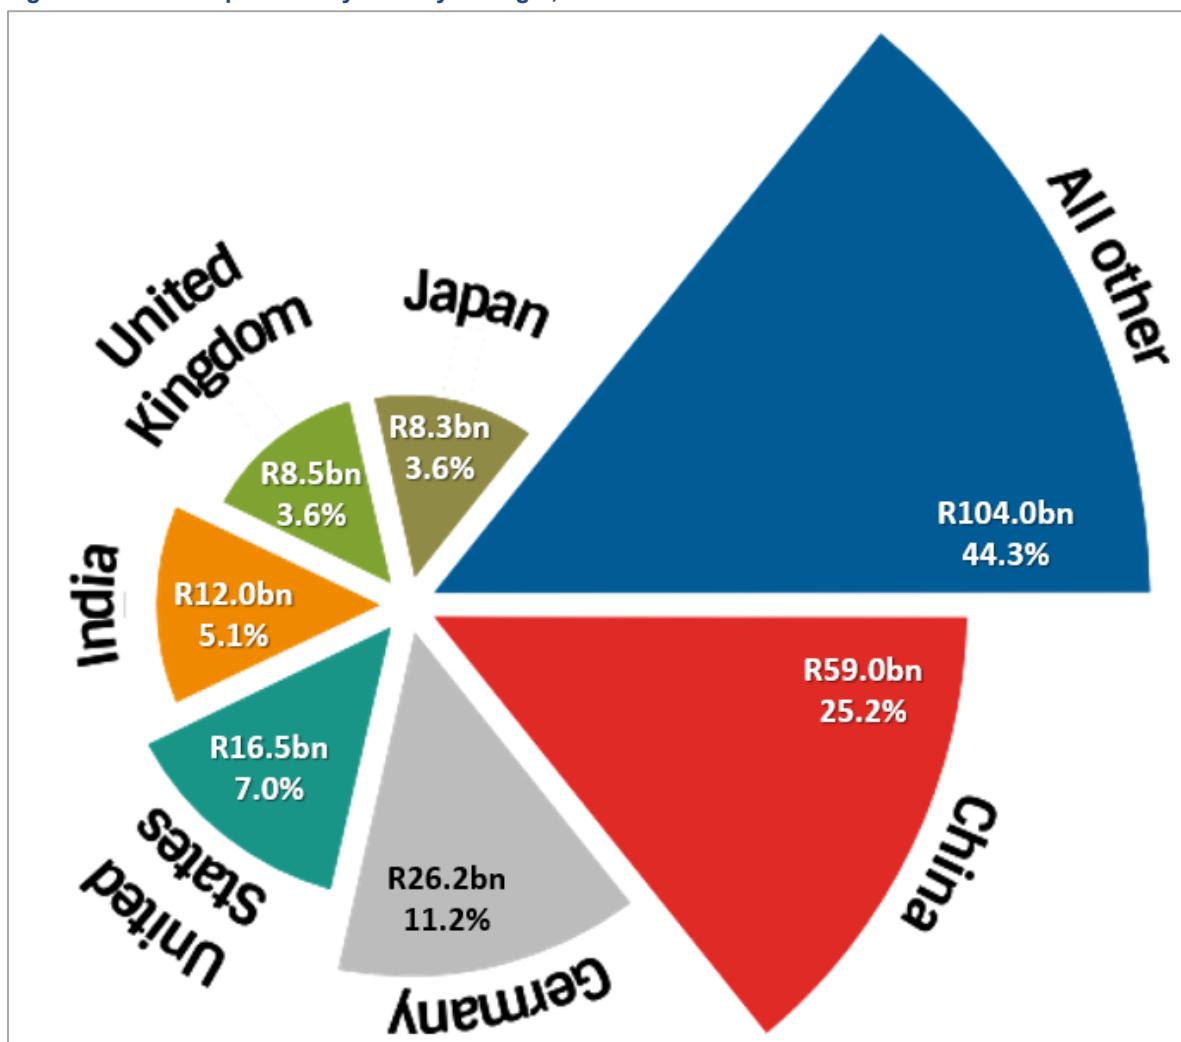

Merchandise imported from Germany under the *Special Provisions* section (automotive parts for purposes of the Motor Industry Development Programme/Automotive Production and Development Programme) recorded the highest Customs value (27.1%) and Import VAT (29.5%) contributions, while the biggest driver of Customs Duties was *Vehicles, Aircraft and Vessels* (81.3%).

Eswatini is the only African trade partner among South Africa's top 20 contributing countries to Total Import Tax in 2019/20, ranking 11<sup>th</sup> in Customs value at 1.4% and 12<sup>th</sup> for Import VAT at 1.5%, with the latter supported by goods imported under the sections of *Chemical Products* (41.5%); *Food, Beverages and Tobacco* (27.7%) as well as *Textiles and Clothing* (18.3%).

Table A5.3.1 shows the 20 countries that were the leading suppliers of goods contributing to Total Import Tax.

# IMPORT VAT AND CUSTOMS DUTIES

Figure 5.5: Total Import Tax by country of origin, 2019/20

## BY CUSTOMS PORT OF ENTRY

South Africa's Customs ports of entry comprise airports, sea harbours, border posts and inland offices.

*Table A5.4.1* lists the contributions of the following categories in 'Customs Port of Entry' for the years 2016/17 to 2019/20, according to their Total Import Tax share by:

- Top 4 Sea Harbours – Durban, Cape Town, Port Elizabeth and Richards Bay;
- Top 4 Airports – O.R. Tambo, Cape Town, King Shaka and Port Elizabeth;
- Top 7 Border Posts and Inland Offices – Johannesburg, East London, Pretoria, Germiston/Alberton, Oshoek, Golela and Beitbridge;
- Other Offices – all remaining Customs offices across the above categories.

# IMPORT VAT AND CUSTOMS DUTIES

Figure 5.6 shows the contribution of each of these categories to the Total Import Tax in 2019/20.

**Figure 5.6: Total Import Tax by Customs port of entry group, 2019/20**

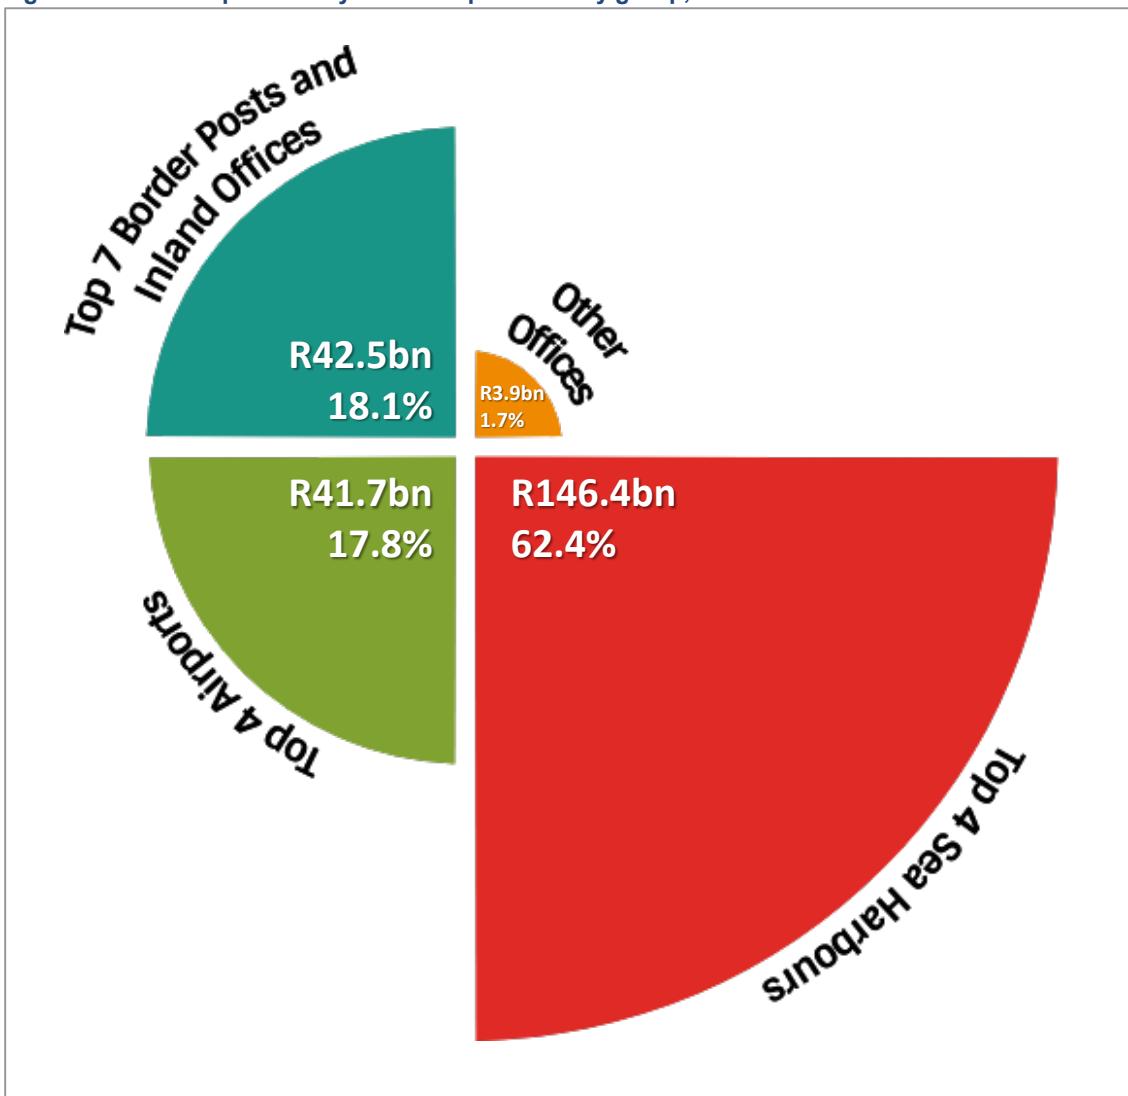

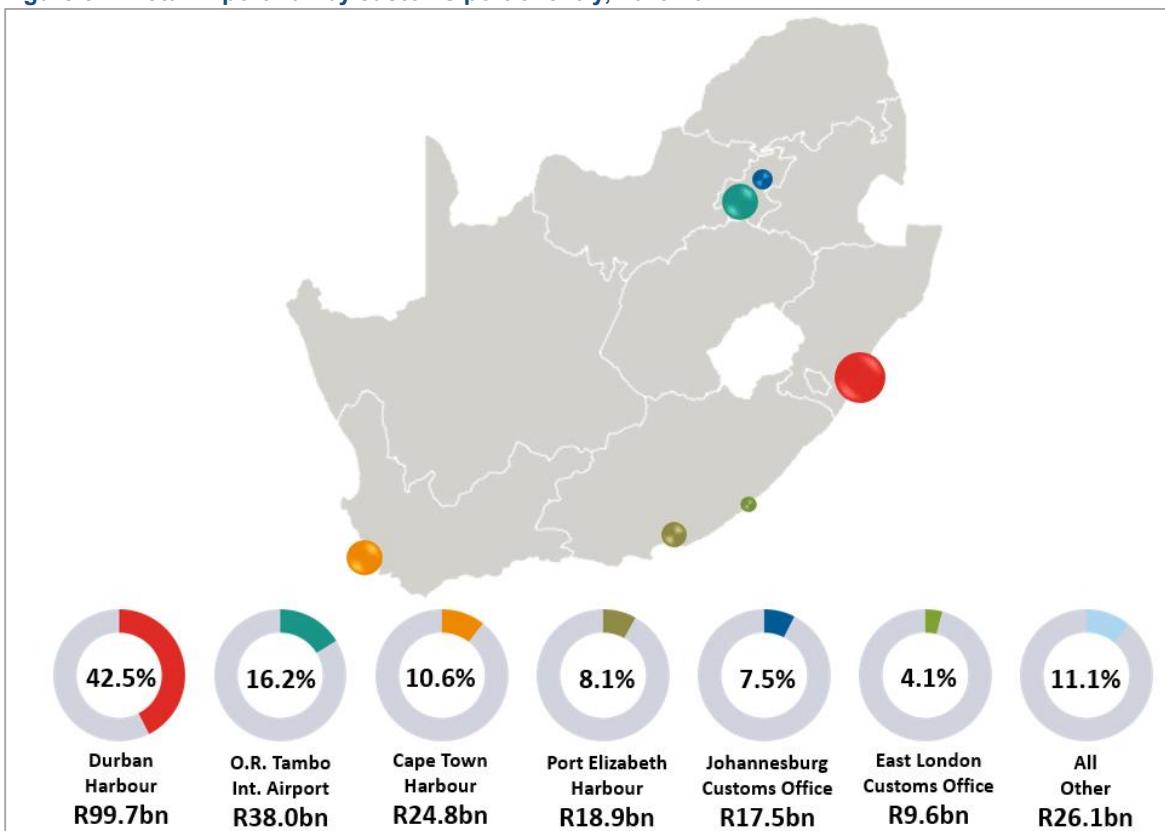

Table A5.4.2 lists the contributions of the top ports of entry, while Figure 5.7 shows the contribution of the top six offices – Durban Harbour, OR Tambo International Airport, Cape Town Harbour, Port Elizabeth Harbour, Johannesburg Customs Office and East London Customs – which together accounted for 88.9% of the Total Import Tax for 2019/20.

Durban Harbour is the largest and busiest shipping terminal in sub-Saharan Africa and hence it contributes significantly to the South African economy. In 2019/20, goods imported through Durban Harbour constituted 40.5% of the national Customs value total, 42.0% of the Import VAT total and 44.0% of Customs Duties revenue. This was driven principally by imports of *Mineral Products* at 22.1% of the port's Customs value; *Machinery and Electronics* at 24.0% of the port's Import VAT; and *Vehicles, Aircraft and Vessels* at 23.4% of the port's Customs Duties collected.

O.R. Tambo International Airport is Africa's largest and busiest airport. In 2019/20, the value of the cargo imported through this airport represented 20.2% of the Customs value of goods imported into the country, while contributing 18.5% to the Import VAT total and 9.2% to the Customs Duties total. More than half of both these taxes collected at the airport were from imports of *Machinery and Electronics*.

**Important to Note** All figures displayed on this table are as per Bills of Entry processed and not actual revenue collected.

1. Customs Duties is inclusive of Specific excise on imports (Duty 1-2A) and Ad valorem excise on imports (Duty 1-2B).

2. Total Import Tax is Import VAT plus Customs Duties.

# OTHER TAXES AND COLLECTIONS

For the 2019/20 fiscal year

## Capital Gains Tax

Company  
CGT =  
**R6.4  
billion**

Individual  
CGT =  
**R7.7  
billion**

Capital Gains Tax  
raised of  
**R14.1  
billion**

Narrow increase of R249 million (1.4%)  
on the R17.6 billion raised in 2017/18.

An aggregate of  
**R156.7 billion** has been  
raised since the introduction  
of CGT in October 2001

**Transfer duties amounted to R7.1 billion  
down from R7.2 billion in 2018/19**

Property transfers that were  
subjected to transfer duty

**R175.7bn**

Average transfer duty paid

**R81 864**

Mineral and Petroleum Resources  
Royalty payments amounted to  
**R11.8 billion, a 37.4%  
increase from 2018/19**

This increase is attributed to a  
significant improvement in  
commodity prices such as  
manganese, iron ore and coal

Contributions to the SACU pool during  
2019/20

**R106.4 billion**

A 6.4% increase from 2018/19

Diesel refunds increased by 50.0% from  
R5.8 billion to **R8.8 billion** in 2019/20

This decrease was driven by the use of diesel  
generators for electricity production in the  
energy sector.

## 6 OTHER TAXES AND COLLECTIONS

### KEY FACTS

For the 2019/20 fiscal year:

- Capital Gains Tax (CGT) of R14.1 billion was raised of which R6.4 billion was attributable to individuals and trusts and R7.7 billion to companies. This reflects a significant decline of R3.8 billion (21.3%) against the R17.9 billion raised in 2018/19. An aggregate of R156.7 billion has been raised since the introduction of CGT in October 2001, with R72.5 billion from individuals and trusts and R84.2 billion from companies;
- Transfer Duty collections of R7.1 billion is down from the R7.2 billion received in 2018/19, representing a 6.8% volume decrease year-on-year and a 1.7% value decrease in Transfer Duty collection;
- Diesel refunds increased from R5.8 billion in 2018/19 to R8.8 billion in 2019/20 an increase of 50.0%. This increase was driven by the increase in the use of diesel generators for electricity production within the energy sector as well as completion of significant audits in the mining and agriculture sectors;
- Mineral and Petroleum Resources Royalty (MPRR) payments by extractors grew significantly by R3.2 billion (37.4%) to R11. 8 billion due to a significant improvement in commodities such as iron ore as well as platinum. This growth, however, was still at a lower rate compared to the growth in 2016/17 of R2.1bn (56.5%); and
- Total contributions to the Southern African Customs Union (SACU) pool amounted to just under R106.4 billion, up by 6.4% on the contributions from the previous year.

### INTRODUCTION

This chapter focuses on revenue collection trends that provide insight into specific aspects of economic activity during 2019/20. It gives an overview of:

- Capital Gains Tax (CGT);
- Transfer Duty;
- Diesel Refunds;
- Mineral and Petroleum Resources Royalties (MPRR); and
- The Southern African Customs Union.

# OTHER TAXES AND COLLECTIONS

## CAPITAL GAINS TAX

CGT is a tax on the proceeds from the disposal of assets in terms of the Income Tax Act No.58 of 1962. It is raised on assessment of the taxpayer and forms part of the normal income tax liability. The revenue due from CGT is declared in PIT or CIT tax returns.

*Table 6.1* shows the cumulative amount for CGT raised since its inception on 1 October 2001 to the end of March 2020, which amounted to R156.7 billion.

It is generally difficult to determine the tax base of CGT as gains are only taxed on realisation of assets and the taxable capital gain is taxed at the marginal tax rates applicable to the taxpayers. After the global financial crisis in 2008, taxpayers who were able to postpone the realisation of their assets did so to prevent losses. Taxpayers who experienced distress selling of assets, most notably the selling of holiday homes and equities, made capital losses. This resulted in lower amounts of CGT being raised.

From March 2012, the inclusion rates for natural persons and special trusts increased from 25.0% to 33.3% of capital gains and for companies and trusts the inclusion rates rose from 50.0% to 66.6%. These legislative changes increased the maximum effective tax rates from 10.0% to 13.3% for natural persons and from 14.0% to 18.6% for companies. From March 2016, these inclusion rates were raised again to 40.0% for natural persons and special trusts; and to 80.0% for companies and trusts. These adjustments increased the maximum effective tax rates from 13.7% to 18.0% for natural persons, from 18.7% to 22.4% for companies and from 27.3% to 36.0% for trusts.

**Table 6.1: Capital Gains Tax (CGT) raised, 2015/16– 2019/20**

R million	CGT raised		
	Individuals	Companies	Total

Cumulative	72 486	84 219	<b>156 705</b>

## TRANSFER DUTY

Transfer Duty is a tax levied in terms of the Transfer Duty Act No 40 of 1949, at progressive rates on the value of any property that is acquired by any individual or juristic entity, subject to fair market value and the exemptions provided for in Section 9 of the Act. It is the largest source of revenue in the “taxes on property” category as defined in the Government Finance Statistics (GFS).

Transfer Duty is levied on a wide range of assets that are defined as property. They include land and fixtures as well as real rights in land, rights to minerals, a share or interest in a residential property company, as well as shares in a share-block company.

# OTHER TAXES AND COLLECTIONS

When property is acquired, Transfer Duty is imposed on the person acquiring the property. When rights associated with property are renounced, responsibility for the payment of Transfer Duty lies with the person in whose favour, or for whose benefit, any interest in or restriction upon the use or disposal of property has been renounced. Transfer Duty is payable within six months from the date of acquisition.

The sale of a property directly or through a change in shareholding is subject to either VAT or Transfer Duty, with VAT taking precedence. If the seller is a registered VAT vendor, and the property forms part of the seller's enterprise, then VAT is payable on the transaction. Where shares are sold, the property is included as part of a fair-valuation of the shares and the transaction is subject to Transfer Duty under specific anti-avoidance measures. For example, the sale of a vendor's private residence, or the sale of property used by a vendor for the purposes of employee housing will be subject to transfer duty as these supplies are made in the course of an exempt activity and not in the course or furtherance of the enterprise carried on by the vendor.

**Table 6.2** shows the Transfer Duty rates applicable to various values of property transfers from 23 February 2011 to 28 February 2015. **Table 6.3** shows the revised rates effective from 1 March 2015 to 29 February 2016 and **Table 6.4** shows the revised rates effective from 1 March 2016 to 28 February 2017; **Table 6.5** reflects the rate of Transfer Duty payable from 1 March 2017 to 29 February 2020 whilst **Table 6.6** reflects the Transfer Duty payable with effect from 1 March 2020.

11 000 001 and above	R1 026 000 + 13% of the value exceeding R11 000 000

1. Effective from 01 March 2020

The migration of Transfer Duty payments onto SARS' electronic e-filing platform in 2013 has improved the accuracy of information on property transactions and associated duties.

From 1 March 2015, the threshold of property values liable for transfer duties was increased to R750 001. This was raised to R900 001 from 1 March 2017 to 29 February 2020. The threshold was further revised to R1 000 001 with effect from 1 March 2020.

In 2019/20 a total number of 86 973 properties were transferred with a combined value of R176 billion. This represents a decrease from the 93 329 properties transferred in 2018/19 with a combined value of R189.0 billion. This resulted in Transfer Duty collections of R7.1 billion down from the R7.2 billion received in 2018/19, representing a 6.8% volume decrease year-on-year and a 1.7% decrease in Transfer Duty collection.

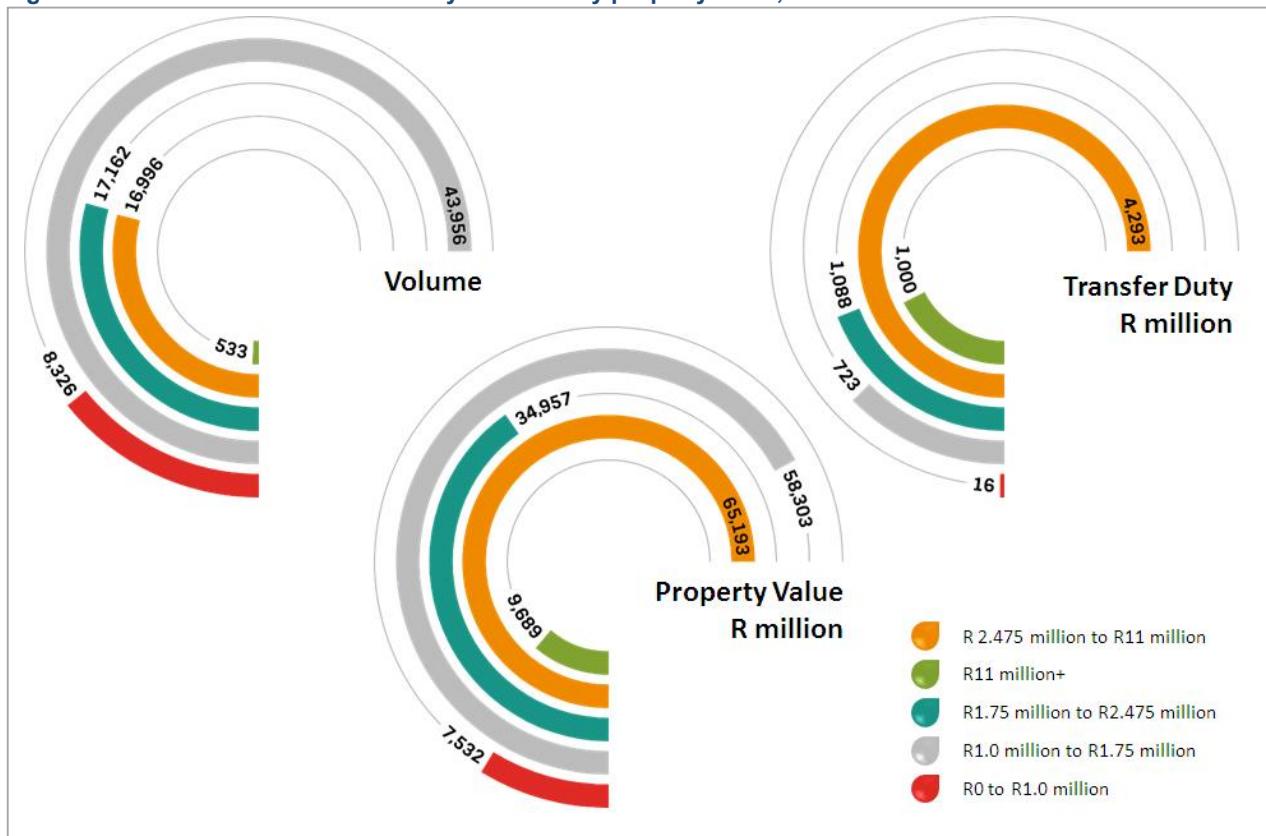

However, since 2008 with the full implementation of the National Credit Act, interest rate hikes and the financial global crisis resulting in a significant slowdown in the rate of house price increases. In 2008, house prices fell by 0.5% in real terms. From 2009 to 2011, house prices rose in nominal terms on average by 1.2%, but declined in real terms on average by 3.8%. In 2012 and 2014 house prices rose in real terms by 3.3% and 2.6% respectively. The transaction volume for the past two fiscal years is surprising considering the challenging economic conditions. The volume decrease in Transfers effected translated into a minuscule R0.1 billion decrease in Transfer duties collected.

In the current year 76% (2018/19 -75%) of the transfer volume accounted for 21% (2018/19 - 20%) of the Transfer Duty collected.

# OTHER TAXES AND COLLECTIONS

The transaction volume and related value-bands for 2019/20 is graphically displayed in figure 6.1 below.

Figure 6.1: Distribution of Transfer Duty collected by property value, 2019/20

The average value of property transferred was R 2.0 million (2018/19: R2.0million) and the average Transfer Duty paid on these transfers was R81 864 (2018/19: R77 606). *Table A6.1.1* shows the Transfer Duty collected in each value category in 2018/19 and *Table A6.1.2* shows the Transfer Duty collected in 2019/20, including the percentage and cumulative percentage contribution per category.”

The *Pareto* analysis for the past two years reveals that, by **volume**; 24.0% of transfers contributed 79.0% (2018/19: 24%) of the transfer duty in 2020 on the back of 52.0% (2018/19: 51%) of property value.

The Transfer Duty declaration requires a specification of the nature of property that is being transferred. One of the following descriptions must be used:

- Primary residence – A person's primary residence is the dwelling where the person usually lives, typically a house or an apartment. A person can only have one primary residence at any given time;
- Other residential property – Property that is used for residential purposes, other than as a primary residence, e.g. holiday home;
- Small holding – Land under 50 acres that is used for cultivation;
- Farm – An area of land, including buildings, used for growing crops and rearing animals;
- Commercial building – A building that is used for commercial purposes, such as office buildings, warehouses or retail space;

# OTHER TAXES AND COLLECTIONS

- Industrial building – A building used for manufacturing or distribution, e.g. factory or workshop;
- Mining property/rights – Ownership of mining rights to mine in a specific area; and
- Other – If the nature of the property is not described above, then it will be classified as other.

*Table A6.1.3.1.* and *Table A6.1.3.2* show the breakdown of Transfer Duty collected by the nature of property. In 2019/20, primary residences made up 84.0% (2018/19: 81.4 %) of the total number of transactions, accounting for 81.2% (2018/19: 79.2%) of the total property value and 77.1 % (2018/19-76.0 %) of Transfer Duties collected for the year. There was a 3.8% decrease in the number of primary residence transactions with a 0.3% (R16 million) attributable decrease in Transfer Duty collections and a 4.5% (R6.7 billion) decrease in total property value.

## DIESEL REFUNDS

The diesel refund system came into effect on 4 July 2001 and reimburses users of diesel in respect of fuel levies collected at source. The refund is intended to promote the international competitiveness of primary production in fishing, farming, forestry and mining and reducing the road-related tax burden of the road accident fund (RAF) levy for certain non-road users especially offshore activities.

With effect from 1 October 2007, the diesel refund scheme was extended to include electricity generation by plants with a capacity exceeding 200 Megawatts that use distillate fuel solely for the purpose of generating electricity for peak demand.

Diesel refund rates differ according to the purpose for which the fuel is used. Primary producers on land (farming, forestry and mining) qualify for a refund amounting to 100% of the RAF levy and 40% of the fuel levy in respect of 80% of their eligible diesel fuel purchases. Offshore activities which include commercial fishing, coasting vessels, offshore mining, NSRI vessels, vessels conducting research in support of marine industry, coastal patrol vessels, vessels servicing fibre optic telecommunications cables, and harbour vessels get full refunds of both the RAF levy and fuel levy. Rail freight (not passenger rail) and harbour vessels are refunded the full RAF levy only. Peak power electricity generation plants, are refunded 50% of the fuel levy since 1 April 2016 and the full RAF levy.

The rates are revised each year to align the concession in line with the latest fuel levy and RAF levy rates. The applicable rates for the past five years are shown in Table 6.7:

**Table 6.7: Diesel refund rates 2014/15 - 2019/20**

Effective Date	Onland c/l <sup>1</sup>	Offshore c/l <sup>1</sup>	Rail and harbour c/l <sup>1</sup>	Peak Power Plants c/l <sup>1</sup>
01/04/2015	250.0	394.0	154.0	394.0

01/04/2019	333.6	537.0	198.0	367.5

1. Cents per litre

# OTHER TAXES AND COLLECTIONS

The Diesel refund concession is administered through the VAT system and claims are either refunded or set off against a vendor's VAT liability. Diesel claims are refunded if there is no VAT payable or if a vendor elects to set off the claim against VAT payable (it would then reduce the amount of domestic VAT paid by the vendor). The Diesel refunds for 2016/17 to 2019/20 are shown in *Table 6.9*.

**Table 6.8: Diesel refunds 2016/17 - 2019/20**

Diesel Refunds (In R million)	2016/17		2017/18		2018/19		2019/20

1. Amount reflected cannot be categorised in the groupings above

Diesel refund claims that reduced VAT liability, used to be accounted for as a part of Domestic VAT collections. Since 2013/14 these claims have been reclassified and are now included in Diesel refunds. This has added around a billion rand each year to the diesel refund amount with the maximum of R2.1 billion in 2019/20.

The litres of diesel used decreased in 2017/18 compared to 2016/17, but have recovered in 2019/20. The reduction in load shedding and decrease in the rate of the diesel refund for the fuel levy by 50.0% contributed to the decision to use less diesel for electricity generation in 2017/18. Diesel refunds have increased by R2.9 billion in 2019/20 as peak power generation was revived as well as completion of significant audits in the mining and agriculture sectors.

## MINERAL AND PETROLEUM RESOURCES ROYALTY (MPRR)

Mineral and Petroleum Resources Royalty (MPRR) payments by extractors grew significantly by R3.2 billion (37.4%) to R11.8 billion due to a significant improvement in commodities such as the iron ore as well as platinum. This growth, however, was still at a lower rate compared to the growth in 2016/17 of R2.1bn (56.5%).

Mineral and Petroleum Resources Royalties (MPRR) compensate the State for the permanent loss of non-renewable resources, it is therefore not classified as a tax. The MPRR Act 28 of 2008 became effective on 1 March 2010 and collections by resource are shown in *Table 6.9*.

The rates for the MPRR are determined according to a formula contained in section 4(1) and (2) of the MPRR Act, which differentiates between the refined and unrefined conditions of resources and the profitability of operations. They are:

- For refined mineral resources, the rate varies between a minimum of 0.5% and a maximum of 5%; and

# OTHER TAXES AND COLLECTIONS

- For unrefined mineral resources, it varies between a minimum of 0.5% and a maximum of 7%.

MPRR grew quite substantially in 2019/20 by as much as R3.2bn (37.4%) to R11.8bn on the back of an improvement in the iron ore as well as the platinum commodities. Although, the iron ore as well as the platinum commodities were the major contributors to the growth, their commodity prices were quite volatile throughout the 2019/20 financial year. The iron ore grew during the first half of the financial year, from US\$93.70 (per ton) in April 2019 up to US\$120.24 (per ton) during the month of July 2019, and it closed the year at US\$88.99 (per ton) in March 2020.

The average price of iron ore throughout the 2019/20 financial year was US\$95.65 (per ton) which remains quite high compared to the previous two financial years (2017/18 and 2018/19). In contrast, the platinum price only grew during the second half of the financial year, from US\$887.40 in April 2019 up to US\$944.71 during the month of September 2019, where it surpassed the average price of US\$884.92. It however closed the year at US\$765.50 in March 2020, the lowest price during the 2019/20 financial year, which was also at the beginning of the lockdown in South Africa. Furthermore, this is as the mining sector exports the bulk of its output, the Rand/Dollar exchange rate which averaged R14.79 to the dollar during the 2019/20 financial year also contributed to the improvement in the MPRR. However, the growth in MPRR is amidst the Mining production, which was on a negative trajectory for most of 2019/20 fiscal year. Although there were some bouts of recovery between December 2019 and February 2020, where it improved year on year to 7.0%. It tumbled even further to 18.0% year-on-year in March 2020 at the start of the lockdown.

Growth was also realised in the previous two financial years; the growth in the 2017/18 financial year was at a lower rate of R1.8bn (31.3%). **The manganese, iron ore as well as coal sub-sectors were major contributors to this growth.** Although manganese contributed significantly to the growth in 2017/18, its relative contribution to the total MPRR was merely 8.7%, compared to iron ore and coal with contributions of 28.5% and 21.5% respectively. An improvement was seen again in 2018/19, although at a lower rate of R1.0bn (13.1%). The coal as well as the platinum sub-sectors' relative contributions were the major contributors to this improvement.

1. Industrial minerals are geological materials which are mined for their commercial value, which are not mineral fuels and are not sources of metallic minerals.

They are used in their natural state or after beneficiation either as raw materials or as additives in a wide range of applications (i.e. industrial minerals are all those minerals other than gold, PGMs, coal, iron ore, chrome, manganese, diamonds, etc.).

2. The commodities grouped under Other are: Chrome, Copper, Fluorspar, Nickel, Oil and Gas, Phosphates, Vanadium and Unspecified.

3. A net refund amount is reflected when refunds exceed payments received.

# OTHER TAXES AND COLLECTIONS

## SOUTHERN AFRICAN CUSTOMS UNION

The Southern African Customs Union (SACU) comprises of the following five Member States: Botswana, Eswatini, Lesotho, Namibia (BELN) and South Africa. SACU was formed in 1910 and is the oldest customs union in the world. Together with South Africa; Lesotho, Namibia and Eswatini also form part of the Common Monetary Area (CMA) and their currency equates to the South African Rand.

SACU Member States apply a common external tariff and have similar Customs and Excise legislation. They impose the same excise duties on imported and locally manufactured goods. The Customs and Excise revenue is remitted into the Common Revenue Pool (CRP) and distributed among the SACU members according to a revenue sharing formula. The BELN countries depend heavily on the Revenue Shares from the Common Revenue Pool (CRP).

The revenue sharing formula used to distribute payments amongst the SACU Member States is derived from two sources:

A. Customs revenue:

- Customs component – revenue is distributed based on each Member State's share of intra-SACU imports;

B. Excise revenue, which is further divided into two components:

- An Excise component – 85% of the excise revenue is based on each member's Gross Domestic Product (GDP) as a percentage of total SACU GDP; and
- A development component – the remaining 15% of the excise revenue is distributed to Member States equally, with a small adjustment for each member's GDP per capita.

1. Rest of the World

Botswana remained South Africa's main source of imports within SACU, while Eswatini is the main imports destination within the union. South Africa registered a trade surplus with all SACU Member States between FY2015/16 and FY2019/20 except for Eswatini during FY2019/20. South Africa's exports to SACU countries averaged 12.8% and imports averaged 3.2% when compared to South Africa's trade with the rest of the world (ROW) over the reviewed period, FY2015/16 to FY2019/20.

The composition of the FY2019/20 CRP has not changed from the FY2018/19 composition where customs duties were about 54.0% of the CRP revenue collection followed by specific excise duties at about 41% and ad valorem excise duties at about 4.0%. However, the customs duty collections have declined to 52.0% in 2019/20 while the Specific Excise duties have increased from about 41.0% to 44.0% in 2019/20.

Year-on-year CRP collections grew by 6.4% to R106.4 billion in FY2019/20. The preliminary CRP collections for FY2019/20 are customs duty collections at R55.4 billion; specific excise duties at R46.8 billion; while ad valorem duties totalled R4.1 billion. The main contributors to the CRP overall performance during the FY2019/20 under customs duties were: vehicles (HS Chapter 87) at 25.0% followed by electrical machinery and equipment (HS Chapter 85) at 9.0%.

Specific excise duties collections were mainly driven by beer (33.2%) and cigarettes at 29.8%. However, the percentage contribution of cigarettes contracted to 29.8% during FY2019/20 from 37.1% during FY2015/16.

# OTHER TAXES AND COLLECTIONS

The contribution to total CRP collections from key commodities such as vehicles and accessories; electrical machinery and equipment; clothing and footwear moderated. The percentage contribution of vehicles and accessories slowed to 25.0% during FY2019/20 from 27.6% during FY2015/16; clothing and footwear contracted to an averaged 6.5% during FY2019/20 from an average of 7.5% during FY2015/16; while electrical machinery and equipment moderated slightly to 8.9% during FY2015/16 to 9.0% during FY2019/20. This was due to a subdued economic environment with passive levels of investment; low domestic demand and subdued household consumption that resulted in negative to weak levels of import growth.

South Africa administers the SACU revenue pool and on a quarterly basis disburses amounts to the BELN countries. Adjustments to estimates of GDP, population and intra-SACU trade also contribute to the determination of overall SACU payments.

## GLOSSARY

*Advalorem* import duties

These duties are levied on certain selected locally manufactured goods. The duties are levied at the same rate of duty on imported goods of the same class or kind and are levied on those items specified in schedule 1 Part 2B of the Harmonised System.

Automotive Production and Development Programme (APDP)

The APDP is the successor of the MIDP and is aimed at creating a platform for more local content to be produced under this initiative. This programme is scheduled to run until 2020. See also *Motor Industry Development Programme (MIDP)*.

BELN countries

Previously known as BLNS. Referring to Botswana, Eswatini (formerly Swaziland), Lesotho and Namibia; with whom South Africa is a signatory to the Southern African Customs Union (SACU) agreement. See also Southern African Customs Union (SACU).

Compound Annual Growth Rate-CAGR

Compound annual growth rate (CAGR) is the rate of return that would be required for an investment to grow from its beginning balance to its ending balance, assuming the profits were reinvested at the end of each year of the investment's lifespan

Capital Gains Tax (CGT)

CGT is based on capital gains made upon the disposal of assets. This tax was introduced in October 2001 and forms part of the income tax system.

The Companies and Intellectual Property Commission (CIPC)

The Companies and Intellectual Property Commission (CIPC)

CO<sub>2</sub>tax on motor vehicle emissions

CO<sub>2</sub>tax is an environmental levy on new motor vehicles manufactured or imported into South Africa. The main objective of this tax is to influence the composition of South Africa's vehicle fleet to become more energy efficient and environmentally friendly.

# GLOSSARY

Carbon Tax	The Carbon Tax is a new tax in response to climate change, which is aimed at reducing greenhouse gas (GHG) emissions in a sustainable, cost effective and affordable manner. The Carbon Tax Act of 2019 came into effect on 1 June 2019.
Carbon Fuel levy	South Africa has three main fuel taxes that apply to petrol, diesel and biodiesel: the general fuel levy, the customs and excise levy and the RAF levy. These levies fund general government expenditure, support environmental goals and finance the RAF. From 5 June 2019, a carbon tax of 9c/litre on petrol and 10c/litre on diesel became effective as set out in the Notes in Section A of Part 5 of Schedule 1.
Company Income Tax (CIT)	Income tax on taxable profits of companies
Cost of revenue collections	The cost of revenue collections provides an indication of the efficiency with which revenue is collected. It is calculated by dividing SARS' operational costs by tax revenue.
Customs duties / import duties	These are levies imposed on goods imported into South Africa, inclusive of specific excise on imports and <i>Ad valorem</i> import duty. Import duties are imposed as a means to protect local producers. They also include anti-dumping and countervailing duties.
Diamond export levy	The objective of the levy is to stimulate the local diamond polishing industry. The levy rate is 5% calculated on the value of the unpolished or rough diamond as released for export from the Diamond Exchange and Export Centre.
Direct taxes	Taxes charged on taxable income or capital of individuals and legal entities.
Dividends tax (DT)	Dividends tax is a tax on shareholders or any beneficial owners of dividends, when they receive dividend distributions from companies. Secondary Tax on Companies (STC) was replaced by Dividends Tax (DT) from 1 April 2012. DT was implemented at a rate of 15% as opposed to the STC rate of 10%.

# GLOSSARY

Donations tax	This tax is currently levied at a flat rate of 20% on the value of the donation. The first R100 000 donated in each year by a natural person is exempt from donations tax. In the case of a taxpayer who is not a natural person, the exempt donations are limited to casual gifts not exceeding R10 000 per year in total. Dispositions between spouses and donations to certain public benefit organisations are exempt from donations tax.
Double Taxation Agreements (DTAs)	The purpose of the agreements between the tax administrations of two countries is to enable the administrations to eliminate double taxation.
Electricity levy	This is a levy applied to electricity generated from non-renewable and nuclear energy sources at 3.5c/kWh from 1 July 2012. Some of this revenue is set aside to fund the rehabilitation of roads damaged as a result of the haulage of coal for electricity generation.
Employees tax	This is a tax that employers must deduct from the employment income of employees such as salaries, wages and bonuses and pay over to SARS monthly. It is withheld daily, weekly, or monthly, when these amounts are paid or become payable to the employees. See <i>Pay-As-You-Earn (PAYE)</i> .
Employment Tax Incentive (ETI)	It is an incentive aimed at encouraging employers to hire young and less experienced work seekers. It reduces an employer's cost of hiring young people through a cost-sharing mechanism with government, while leaving the wage the employee receives unaffected. Employers can claim the ETI and reduce the amount of Pay-As-You-Earn (PAYE) tax payable by the amount of the total ETI calculated in respect of all qualifying employees. This incentive came into effect on 1 January 2014.
Environmental levy	This was introduced with the purpose of protecting and conserving the local and global environment. See also <i>Plastic bags levy</i> , <i>Incandescent light bulb levy</i> , <i>Electricity levy</i> and <i>CO<sub>2</sub> tax on motor vehicle emissions</i> .
Estate duty	Estate duty is calculated at a rate of 20% on the dutiable amount of a deceased estate. Certain admissible deductions from the total value of the estate are allowed.

# GLOSSARY

Excise duties	Are levied on certain locally manufactured goods and on their imported equivalents. This duty is levied as a specific duty on tobacco and liquor products, and as an <i>ad valorem</i> duty on cosmetics, televisions, audio equipment and motor cars. Relief from excise duty is available where excisable products are exported.
Fiscal drag	When salaries are adjusted to compensate for the effect of inflation on the value of money, the taxpayer is pushed into an income tax bracket where higher rates apply. In this way the individual's effective tax rate is increased, even though the taxpayer's income in real terms may not be increasing.
Fiscal year	It is the financial year of government i.e. from 1 April to 31 March of the subsequent year.
Fuel levy	Fuel levy is a Specific excise tax imposed in terms of the Customs and Excise Act. Relief is available through a diesel refund system for farming activities, forestry, mining, offshore vessels, harbour vessels, locomotives used for rail freight, and large electricity generation plants.
Gross Domestic Product (GDP)	A measure of the total national output, income and expenditure in the economy.
Harmonised System (HS)	It is essentially the system according to which all internationally traded products, components or commodities are classified and is also known as the International Convention on the Harmonised Commodity Description and Coding System (Harmonised System). This international system is currently used by the World Customs Organisation (WCO) and more than 200 countries and customs or economic unions, which account for around 98% of world trade.
International Monetary Fund (IMF)	International Monetary Fund
Income tax (IT)	IT is a tax on income and profit and is levied on individuals, companies and trusts. It is the national government's main source of income and is imposed in terms of the Income Tax Act 58 of 1962.
Indirect taxes	Indirect taxes are taxes imposed on goods and services (e.g. VAT) rather than on individuals or companies. See also <i>Direct taxes</i> .
Input VAT	Input VAT is the VAT charged on the purchase price when a vendor buys vatable goods or services from another supplier.

# GLOSSARY

International air passenger departure tax	International air passenger departure tax is a tax imposed on international air travel. As from 1 October 2011 fee-paying passengers departing on international flights pay a tax of R190 per passenger. Passengers flying to Botswana, Lesotho, Namibia and Swaziland (BLNS countries) pay R100 per passenger.
IRP5	An IRP5 is the employee's tax certificate that is issued to him/her by an employer registered for PAYE. It details all sources of income, deductions allowed and taxes withheld. It is used by the employer to reconcile PAYE paid to SARS during the tax year and by the employee to complete his/her income tax return for a specific year.
Marginal income tax rate	The marginal tax rate is the rate of tax on an incremental unit of income.
Medical Scheme Fees Tax Credit	Medical Scheme Fees Tax Credit is a rebate which reduces the normal tax a person pays. This rebate is non-refundable and can't be carried over to the next year of assessment.
Mineral and Petroleum Resources Royalty (MPRR)	The MPRR is a levy imposed on the exploration and extraction of minerals and petroleum resources. This levy took effect from 1 March 2010.
Motor Industry Development Programme (MIDP)	The MIDP is a voluntary incentive scheme designed to save money for the participant in the form of a reduction on import duties due to the incentives of the MIDP. This programme was implemented on 1 September 1995 and has been reviewed twice before ending in 2012. See also <i>Automotive Production and Development Programme (APDP)</i> .
Municipality	A municipality is the governing body of a clearly defined territory and its population.
National Revenue Fund	The Fund is the consolidated account of the national government into which all taxes, fees and charges collected must be paid.
Natural persons	A natural person is a real living human being, as opposed to a legal person.
Non-tax revenue	Non-tax revenue is income received by the government in the form of interest and dividends (from parastatals, public entities) and as a result of administrative charges, licences, fees and sales of goods and services.

# GLOSSARY

Output VAT	Output VAT is the VAT charged by vendors when they sell their own goods and services.
Panel data	Also known as longitudinal data or cross-sectional time series data in some special cases, panel data is data that is derived from a (usually small) number of observations over time on a (usually large) number of cross-sectional units like individuals, households, firms, or governments.
Pay-As-You-Earn (PAYE)	PAYE is income tax withheld by employers from the employment income of employees. This ensures that an employee's income tax liability is settled on a continuing basis. See also <i>Employees' tax</i> .
Personal Income Tax (PIT)	Income tax on the taxable income of individuals
Plastic bags levy	This levy is a tax on certain types of plastic shopping bags. The levy aims to encourage the reuse of these bags.
Platinum group metals (PGMs)	PGMs includes six pure metals with high melting points: platinum (Pt), palladium (Pd), rhodium (Rh), iridium (Ir), osmium (Os) and ruthenium (Ru) which tend to occur in the same mineral deposits. In addition to their oxidation and reduction properties, these metals have the ability to stay stable at high temperatures and are extremely resistant to corrosion.
Primary rebate	This rebate is a reduction in income tax that is available to all taxpayers. See also <i>Secondary rebate</i> and <i>Tertiary rebate</i> .
Progressive tax	A progressive tax is a tax in which the effective tax rate increases with increasing income.
Provisional tax (companies)	Provisional tax for companies for any given tax year, is paid in three instalments: the 1 <sup>st</sup> due six months into the company's tax year; the 2 <sup>nd</sup> at the end of the tax year; and the 3 <sup>rd</sup> six months after the end of the tax year (unless the tax year ends at the end of February, then the third is due seven months after the end of the tax year).
Provisional tax (individuals)	Provisional tax for individuals is a system that makes taxpayers provide for their final tax liability by paying two amounts during the course of the year of assessment, and a third payment seven months after the end of the year of assessment.

# GLOSSARY

Paragraph 19(3)	Paragraph 19(3) of the Fourth Schedule to the Income Tax Act allows the Commissioner to call upon the taxpayer to justify an estimate made by the taxpayer, or to provide particulars of income and expenditure or any other particulars that may be required for the year of assessment in respect of which the provisional tax payment is being made. If not satisfied with the estimate, the Commissioner may increase it to an amount that is considered reasonable.
Provisional tax (80% rule)	The 80% rule requires taxpayers with taxable income in excess of R1 million to pay at least 80% of their tax liability by the time they make their second provisional payment to avoid penalties. This change was implemented for taxpayers with year ends after 1 March 2009.
Residence-based tax system	A residence-based tax system is a system where residents are taxed on their worldwide income, irrespective of where their income was earned.
Retirement funding reform	From 1 March 2016 deductions for contributions to retirement funds includes contributions to pension, provident and retirement annuity funds. The formula to determine deductible retirement fund contributions is set out in section 11F (replacement of section 11(k)).
Royalty (CIT)	Any amount that is received or accrues in respect of the use or right of use of or permission to use any intellectual property as defined in section 23I of the Income Tax Act; or the imparting of or the undertaking to impart any scientific, technical, industrial or commercial knowledge or information, or the rendering of or the undertaking to render any assistance or service in connection with the application or utilisation of such knowledge or information.
Secondary rebate	The secondary rebate is an additional rebate in income tax over the primary rebate that is available to taxpayers between the age of 65 and 75 years. See also <i>Primary rebate</i> and <i>Tertiary rebate</i> .
Secondary Tax on Companies (STC)	STC was a tax on dividends declared by a company, which was calculated at the rate of 10% (12.5% prior to 1 October 2007) of the net amount of dividends declared. This tax was replaced with Dividends Tax (DT) on 1 April 2012.
Securities Transfer Tax (STT)	STT is a tax levied on every transfer of a security and is levied at a rate of 0.25%. This tax was known as Uncertificated securities tax prior to 1 July 2008.

# GLOSSARY

Skills Development Levy (SDL)	SDL is a compulsory levy to fund training paid by employers. The rate is 1% of total payroll and is payable by employers that are registered with SARS for employees' tax purposes and who have an annual payroll of more than R500 000 (R250 000 before 1 August 2005).
Small business Corporation (SBC)	SBC means any close corporation or co-operative or any private company as defined in section 1 of the Companies Act No. 71 of 2008 or a personal liability company as contemplated in section 8(2)(c) of the said Companies Act if at all times during the year of assessment all the holders of shares in that company, co-operative, close corporation or personal liability company are natural persons, where the gross income for the year of assessment does not exceed an amount equal to R20 million and qualifies for a special graduated SBC tax rate regime.
Southern African Customs Union (SACU)	The SACU agreement is an agreement that allows for the unrestricted flow of goods and services, and the sharing of customs and excise revenue between South Africa, Botswana, Eswatini (formerly Swaziland), Lesotho and Namibia.
Southern African Development Community (SADC)	SADC is an inter-governmental organisation. Its goal is to further socio-economic cooperation and integration as well as political and security cooperation among 15 Southern African states.
Specific excise duty	Specific excise duty is a tax on each unit of output or sale of goods, unrelated to the value of the goods e.g. alcoholic beverages or cigarettes.
Stamp duty	Stamp duty was levied on leases of fixed property and until June 2008 on the registration of transfer of unlisted marketable securities. This tax was abolished with effect from 1 April 2009.
Standard Industrial Classification of all Economic activities (SIC)	SIC is a coherent and consistent classification structure of economic activities based on a set of agreed concepts, definitions, principles and classification rules.  The national SIC classification defined and used by Statistics South Africa is based on the International Standard Industrial Classification developed by the United Nations Statistics Division.

# GLOSSARY

Tax Administration and Diagnostic Tool (TADAT)	Tax Amnesty is a period allowed by tax authorities during which taxpayers who are outside the tax net (but should be registered for tax purposes) can register for tax or taxpayers can disclose previously unreported taxable income with relief from penalties and interest. This is inclusive of the Voluntary Disclosure Program (VDP).
Tax Amnesty	Tax Amnesty is a period allowed by tax authorities during which taxpayers who are outside the tax net (but should be registered for tax purposes) can register for tax or taxpayers can disclose previously unreported taxable income with relief from penalties and interest. This is inclusive of the Voluntary Disclosure Program (VDP).
Tax base	The tax base is the aggregated value of income, sales or transactions on which a particular tax is levied.
Tax buoyancy	Tax buoyancy is a measure of the ratio of change in tax revenue to the change in the tax base or GDP.
Tax on retirement funds (TRF)	TRF was a tax levied on the gross interest, net rental and foreign dividend income of retirement funds i.e. pension, provident and retirement annuity funds. This tax was abolished in 2007.
Tax-to-GDP ratio	For public finance comparison purposes, a country's tax burden or tax-to-GDP ratio is computed by taking the total tax payments for a particular fiscal year as a fraction or percentage of the GDP for that year.
Tax revenue	In terms of the System of National Accounts (SNA), tax revenue is defined as "a compulsory, unrequited payment to government".
Tax year	The tax year is the 12-month period for which tax is calculated. For individuals it starts on 1 March and runs until the end of February the following year, and for companies it is normally the financial year of the company for financial reporting purposes.
Taxable income	Taxable income refers to the portion of income of an individual or a company which is subject to tax. This is not the same as actual income, as exemptions may apply and deductions may be claimed, such as medical expenses in the case of individuals or depreciation in the case of companies.
Tertiary rebate	The tertiary rebate is a reduction in income tax that is available to taxpayers age 75 and older in addition to the primary and secondary rebates. See also <i>Primary rebate</i> and <i>Secondary rebate</i> .

# GLOSSARY

Transfer duty	Transfer duty is a tax levied in terms of the Transfer Duty Act No. 40 of 1949 at a progressive rate on the value of any property that is acquired by any individual or juristic entity.
Turnover Tax	Turnover Tax is a basic tax that was introduced for micro businesses with a turnover not exceeding R1 million per annum. The objective is to reduce the tax compliance and administrative burden by simplifying and reducing the number of returns that have to be filed. This tax was introduced with effect from 1 March 2009.
Uncertificated securities tax	See <i>Securities Transfer Tax (STT)</i> .
Value-Added Tax (VAT)	VAT is levied at a standard rate of 15% on most goods and services subject to certain exemptions, exceptions and zero-ratings, provided for in the VAT Act No. 89 of 1991. VAT is levied on the supply of all goods and services rendered by registered vendors. VAT is also levied on the importation of goods and services into South Africa.
